**Church (rebuilding)**, Carlisle, Pa., \$30,000. Architects, Ritcher & Eiler, 147 North Fifth street, Reading, Pa. Owners, St. Patrick's Roman Catholic Church, Rev. S. J. Welsh, Carlisle, Pa. Brick, stone trim, 1½ stories, slate roof, hardwood floors, steam heat, electric light, steel truss. Contract awarded to Titzel Const. Co., Harrisburg, Pa.

**Bungalow**, Third and Summit streets, Reading, Pa. Architect, Earl Hickman, 119 South Fifth street, Reading, Pa. Owner, G. F. Schultz, care of architect. Brick, 1½ stories, 40x60 feet, slate roof, hardwood floors, electric lighting. Contract awarded to Dominic Maurer & Sons, Glenside, Berks County, Pa.

**Residence**, Malvern, Pa. Architect, Henry L. Reinhold, Jr., 1513 Walnut street, Philadelphia. Owners, Malvern Realty Co., Malvern, Pa. Frame and stucco, 2½ stories, 30x40 feet, shingle roof, hardwood and pine floors, hot water heating, tile work. Contract awarded to E. E. Ruth, Malvern, Pa.

**Semi-Detached Residence**, Wynnewood Road, Ardmore Park, Pa. Architect, private plans. Owner, H. H. Harding, 1506 Loudon street, Philadelphia. Frame and stucco, 2½ stories, 33x36 feet, shingle roof, hardwood floors, hot water heating, electric lighting. Contract awarded to Merion Const. Co., 2313 Walnut street.

## New Jersey Construction News

**Residence and Garage**, Atlantic City, N. J. Architect, J. Ethan Fieldstein, Otis Building, Philadelphia. Owner, name withheld. Brick, 2½ stories, 52x40 feet, slate roof, hardwood floors, hot water heat, electric light, tile work. Plans in progress.

**Factory (alts.)**, Atlantic City, N. J. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City. Owners, New Jersey Tobacco Co., 815 Atlantic avenue, Atlantic City, N. J. Brick, 2 stories, 45x90 feet, general alterations. Plans in progress.

**Warehouse (add.)**, Atlantic and Kentucky avenues, Atlantic City. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City, N. J. Owners, Kensington Carpet Co., on premises. Brick, 1 story add., 33x127 feet, slag roof, pine floors, electric light, hollow tile. Plans in progress. Architect will be ready for bids in a few days.

**Apartment**, Atlantic City, N. J. Architect, Bertram Ireland, Guarantee Trust Building, Atlantic City. Owners, Yarmov & Shenkman, Guarantee Trust Building, Atlantic City. Brick, 3 stories, 33x80 feet, slag roof, hardwood floors, hot water heat, electric light, metal lath, tile work. Owners will build.

**Apartment and Store**, 16 South Georgia avenue, Atlantic City. Architect, A. F. Amodio, Segal Building, Atlantic City, N. J. Owner, Joseph Di Lasceco, Barber Shop, Hotel Traymore, Atlantic City. Brick, 3 stories, 22x57 feet, slag roof, hardwood floors, hot water heat, electric light, tile work. Owner will build.

**Rectory**, Roebling, N. J. Architect, R. A. Schuman, 202 West State street, Trenton, N. J. Owners, Hungarian Reformed Church, Rev. J. Ambrus, Roebling, N. J. Brick, 2½ stories, 16x43 feet, slate roof, hot water heat, tile work, electric light. Architect ready for bids.

**School**, Morrisville, N. J. Architects, Fowler & Seaman, Fitzcharles Building, Trenton, N. J. Associate architect, T. B. Stockham, Morrisville, N. J. Owners, Morrisville School

Board, Mr. Taylor, secretary, Morrisville, N. J. Brick, hollow tile, steel, 2 stories and basement, 45x170 feet, tile roof, yellow pine floors (heating, electric work and plumbing reserved), hollow tile, metal lath, safety treads, roof ventilators, rolled steel sash, fire doors, bond, steel stairs, ornamental iron work, metal ceilings, waterproofing and damp-proofing. Owners will be ready for bids in ten days.

**Annex**, Metuchen, N. J. Architect, Emil G. Perrot, 1211 Arch street, Philadelphia. Owners, St. Joseph's Novitiate, Metuchen, N. J. Brick, cut stone, castone and steel, 3 stories, 105x43 feet, slate roof, composition, cement and pine floors, roof ventilators, metal ceilings, iron work and stairs, floor hardener, bond, kalamein doors, rolled steel sash. Architect taking bids due May 3rd.

**Police Station and Fire House**, Tennessee avenue, Atlantic City. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City. Owners, City of Atlantic City, care of E. L. Bader, City Hall, Atlantic City. Brick, 2 stories, 16x45 feet, add., slate and slag roof, pine floors (plumbing and electric work reserved), metal lath, tile and marble work, copper skylights, kalamein doors, ornamental terra cotta. Architects and owners taking bids due May 10th.

**School (alts. and add.)**, Bordentown, N. J. Architects, Fowler, Seaman & Co., Fitzcharles Building, Trenton, N. J. Owners, Bordentown School Board, Mr. Buchanan, secretary, Bordentown, N. J. Brick, 2 stories, 10x25 feet, tin roof, pine floors (heating, electric work, plumbing reserved). Owners taking bids due May 9th.

**School No. 2 (alts. and add.)**, Bordentown, N. J. Architects, Fowler & Seaman, Fitzcharles Building, Trenton, N. J. Owners, Bordentown School Board, Mr. Buchanan, secretary, Bordentown, N. J. Frame, 1 story, 35x40 feet, ti roof, pine floors (heating, plumbing and electric work reserved). Owners taking bids due May 9th.

**Ice Storage House**, Woodstown, N. J. Architect, William F. Koelle, Twenty-sixth and Oxford streets. Owners, Woodstown Ice & Coal Co., Woodstown, N. J. Brick, 1 story, 42x64 feet, slag roof, cement floors. Owners taking bids.

**Apartment**, Atlantic City, N. J. Architect, J. V. Mathis, Guarantee Trust Building, Atlantic City. Owner, name withheld. Brick, structural iron, 3 stories, 35x87 feet, slag roof, pine floors, hollow tile, hot water heat, electric light, metal lath, tile work, rolled steel skylights. Architect taking bids due May 6th.

**Church**, Willow street, Trenton, N. J. Architect, R. A. Schuman, 202 West State street, Trenton, N. J. Owners, St. Paul's Zion A. M. E. Church, Rev. I. B. Turner, 304 North Willow street, Trenton, N. J. Stone, brick, 1 story and basement, 46x75 feet, slate roof, hardwood floors, steam heat, electric light, metal lath. Architect taking bids due May 10th.

**Fairview School (alts. and add.)**, Camden, N. J. Architects, Paul A. Davis & Dunlap, 1713 Sansom street, Philadelphia. Owners, Board of Education, Elwood C. Bunting, secretary. Lowest bidders: Barnes & McLaughlin, 17 South Seventeenth street, Philadelphia, \$141,050, plus \$1,200, deduct \$500; Frank G. Stewart, 1619 Sansom street, Philadelphia, \$143,125, plus \$1,000, plus \$1,128. Heating and ventilating, Camden Heating Co., Camden, N. J., \$17,750. Plumbing and drainage, J. H. Hutchinson, 1020 Callowhill street, Philadelphia, \$5,359. Electric, J. F. Buchanan Co., 1719 Chestnut street, Philadelphia, \$1,868.

The BUILDERS' GUIDE is in its thirty-eighth year of continuous publication.

## New Jersey Contracts Awarded

**Residence**, Edgewood avenue, Trenton, N. J. Architect, William Klemann, First National Bank Building, Trenton, N. J. Owners, Misses Stephens, care of architect. Frame, 2½ stories, 36x28 feet, slate roof, hardwood floors, hot water heat, electric light, tile work. Contract awarded to William Acher, Hollywood Drive, Trenton, N. J.

**Stables (add.)**, Trenton, N. J. Architect, William Klemann, First National Bank Building, Trenton, N. J. Owners, Castanea Dairy, 234 North Broad street, Trenton, N. J. Brick, 2 stories, 50x60 feet, slag roof, concrete and wood block floors, electric light, rolled steel sash. Contract awarded to William Burton, American Mechanics' Bank Building, Trenton, N. J.

**Stores (2) and Apartments**, Roebling, N. J. Architect, R. A. Schumann, 202 West State street, Trenton, N. J. Owner, Joseph Borsteh, Roebling, N. J. Brick, 2 stories, 34x70 feet, slag roof, hardwood floors, electric light, tile work, plate glass, rolled steel skylights, copper work, metal ceilings. Contract awarded to Patcher & Garr, Trenton, N. J.

**Store and Apartment**, South Broad street, Trenton, N. J. Architect, R. A. Schumann, 202 West State street, Trenton, N. J. Owner, Frank Kielewski, 699 South Broad street, Trenton, N. J. Brick, 2½ stories, 44x80 feet, slag and slate roof, hardwood floors, steam heat, electric light, metal lath, tile work, metal ceilings. Contract awarded to Patcher & Garr, Trenton, N. J.

**School**, Ewing Park, Mercer County, N. J. Architect, R. A. Schumann, 202 West State street, Trenton, N. J. Owners, Ewing Township School Board, C. G. Latham, secretary, care of architect. Brick, 1 story and basement, slag roof, 87x30 feet, pine floors, metal lath, safety treads, roof ventilators, concrete stairs. Contract awarded to Patcher & Garr, Trenton, N. J.

**Cottages (alts. and add.) to Apartment**, Atlantic City, N. J. Architect, J. V. Mathis, Guarantee Trust Building, Atlantic City. Owner, Mr. Asbury, care of architect. Brick, 3 stories, 24x31 feet, slag roof, pine floors, electric light, tile work, partitions, plumbing. Contract awarded to J. Vaughn Mathis & Son, Guarantee Trust Building, Atlantic City, N. J.

**Residences (6)**, South Florida avenue, Atlantic City, N. J. Architect, E. Amodio, Segal Building, Atlantic City, N. J. Owner, Charles Camarota, 116 North Chelsea avenue, Atlantic City, N. J. Brick, stucco, 2 stories, 17x50 feet, slate and slag roof, hardwood floors, Arco heating, electric lighting, tile work. Contract awarded to Abrams Const. Co., 2100 Atlantic avenue.

**Municipal Poultry Market**, Atlantic City, N. J. Architect, R. A. Stout, Guarantee Trust Building, Atlantic City. Owners, City of Atlantic City, Department of Streets and Public Improvements, Atlantic City, N. J. Brick, concrete, steel, 1 story, 212x103 feet, slag roof, cement floors, electric light, metal lath, bond, ornamental iron work. Contract awarded to F. P. Molinara & Co., Chalfont and Pacific avenues, Atlantic City, N. J.

The man with an order to place doesn't hunt you up in the city directory these days. He hasn't the time. If he can't find you in your trade magazine he can and does find somebody else, and that somebody else books the order.

## Miscellaneous Construction News

**Grade School**, Elkton, Md. Architect, C. R. Hope, Dupont Building, Wilmington, Del. Owners, Cecil County School Board, care of H. Caldwell, secretary, Elkton, Md. Brick, 2 stories. Sketches in progress.

**Schools (3)**, Cecil County, Md. Architect, C. R. Hope, Dupont Building, Wilmington, Del. Owners, Cecil County School Board, care of H. Caldwell, secretary, Elkton, Md. Brick, 1 story, 3 rooms. Sketches in progress.

**Junior High School**, Roanoke, Va. Architects, H. Courcy Richards, 618 Chestnut street, Philadelphia. Owners, Board of Education, Roanoke, Va. Brick, steel and concrete, 3 stories, 186x89 feet, will contain 17 classrooms and combination gymnasium and auditorium, steam heating, electric lighting, plumbing, ventilating. Contracts awarded to D. J. Phipps, Roanoke, Va., \$146,939. Heating and ventilating, American Heating & Ventilating Co., Richmond, Va., \$14,675. Plumbing, Lowe & Co., Roanoke, \$8,477. Electric, Richardson & Wayland, Roanoke, Va., \$2,890.

### Proposals

**TREASURY DEPARTMENT**, Office of the Supervising Architect, Washington, D. C., April 25, 1923. Sealed Proposals will be opened in this office at 3 P. M., May 22, 1923, for construction of the United States Post Office at Phoenixville, Pa. Drawings and specifications may be obtained from the custodian of the site at Phoenixville, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from Page 276)

modern types of insulation are more efficient and certain in results.

#### *Protects from Heat and Cold*

The use of modern insulating materials for homes was borrowed from the refrigeration industry. Here cork and other materials have been used for many years. In fact, a cold storage plant is practically impossible without the use of insulation.

Gradually it dawned upon us that the materials which would keep out the heat in a cold storage warehouse—the "insulation which permitted carloads of highly perishable fruit to be moved from sunny California to frigid Winnipeg—would keep out the cold in homes. Consequently insulation began to appear in architectural specifications and to be accepted and installed by the builders of better houses everywhere. Today the many materials that may be used for this purpose are being used in ever increasing quantities. A movement which began in the more effort to make homes easier to heat has spread throughout the land even into the southern district, for insulation has the double virtue of protecting homes from both heat and cold.

The question of whether or not one should use an insulating material for a

small home sometimes boils itself down to the actual saving in coal possible each year. This saving can be figured out for any plan and with any wall construction, but it depends, of course, on the amount of window and door area, the exposure, and the part of the country in which the house is built. The actual coal saving also depends upon the workmanship used in applying the insulation, the calking of window and door jambs, beam fills, and other matters of good building. It is usually possible, however, to cut the total fuel expense about 25 per cent., a very real saving on a small home.

Of course, the use of an insulating device in the walls without an observance of other details of construction which must go with it would reduce to a very small figure any value which might have been expected from the insulation. Some of the details which must be observed are as follows:

First, the space between the floor joists where they rest on the wall must be filled with masonry. This is called the "beam northern districts of our country in an fill" This fill serves as an obstruction to wind and to the circulation of air in the wood frame. It also protects your house to a certain extent from fire. This is one of the measures recommended by the Fire Underwriters to render wooden houses less inflammable.

Second, the insulation must be applied in continuous sheets and in such a manner that it will make tight joints with the studdings and joists and plates. You will see that if the joints are not tight the insulation will not be most effective. An ice box would not serve satisfactorily at all if any part of the wall were not insulated. The same principle applies to the insulation of a home.

Third, sheathing boards must be covered with a continuous layer of heavy waterproof sheathing paper for this supplies the necessary device to stop the wind and to protect the insulating medium. Some excellent forms of insulation such as grass, hair, and fibre are contained in heavy paper casings, but these also are reinforced by the sheathing paper. This should not be omitted in any case.

Fourth, the window frames and door jambs must be carefully calked with oakum or some other fibrous material for these spaces are usually too small to allow the workmen to place in position the kind of insulation used generally for the walls.

Finally, the windows and doors must be tightly fitted. Weather strips or storm sash should be employed. A combination of these is excellent, if one can afford it.

Perhaps we should draw attention to one feature of insulation which is often overlooked by the home builder. This has to do with the location of the insulat-

ing mat which protects the second story. We often see the insulation placed between the rafters but we are sure that this is not the best place to put it if the attic is not to be used for living quarters, for it means that there will be some heat losses through the second story ceiling to warm the attic space. The best location for the insulation in this particular connection is between the ceiling joists of the second story. As a matter of fact, insulation placed here is perhaps more effective than it is anywhere else in the building. We have quite often seen homes in which the insulation was omitted in the ceiling of the second story as a measure of economy, but engineers have determined that this is certainly a place where insulation will be of the greatest value.

The best results are obtained only by insulating all the outside walls of the building and the second story ceiling too. It is certainly worth knowing that the fuel saving alone of an insulated and otherwise well built home will pay for the entire cost of the insulation in a few seasons and will then return added dividends annually in lower fuel bills, to say nothing of the extra comfort.

—*The Small Home.*

F. V. Warren Company, Contractors and Builders, announce the removal of their offices to the Fraternal Home Insurance Building, 1913 Arch St., Philadelphia.

Thomas Edward Ash, architect, formerly of 1220 Locust St., has moved his offices to 1012 Walnut St., Philadelphia.

Man and the giraffe are the only two living things that can't swim naturally. Throw a day-old kitten into the Mississippi and it will paddle its way to shore. The giraffe can't swim because he's not built that way. Man can't swim, just because he is afraid. The chances are that the reason you are not in the swim—financially or otherwise—is because you are afraid.—Glen Buck.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising or advertising from an emotional standpoint.—Elbert Hubbard.

## DAILY BUILDING NEWS

**E**VERY morning you get the names and addresses of concerns in the market for what you sell. You also get complete information concerning work being planned, figured on and awarded.

Instead of spending large sums locating prospects and losing valuable time running down rumors, the

### DAILY BUILDING NEWS

directs you to orders, orders that will many times pay for the investment in these reports.

To subscribers there is also a time-saving telephone service that answers your inquiries promptly and authoritatively. This feature alone is worth more than the cost of the Daily Building News reports.

We would appreciate the opportunity of explaining further and showing you how you can profit by these reports and the advance information they supply. Why not today call, or phone for sample sheets or representative? You will not be obligated in any way.

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not "sand" or crumble, even under the hardest foot traffic. Phone or write us for information.

reserved.) Contract awarded to J. D. Lengel, Wayne, Pa.

**Garage,** Ashbourne Road and Montgomery avenue, Ashbourne, Pa. Architect, H. P. Weldon, 1627 Sansom street, Philadelphia. Owner, William Fox, on premises. Stone, brick and concrete and steel, 2 stories, 50x75 feet, slag roof, cement floors, rolled steel sash (heating, lighting and plumbing reserved). Contract awarded to Albert Dunlap, 7223 Oak avenue, Oak Lane.

**Bank,** Honesdale, Pa. Architects, Edward H. Davis and George M. D. Lewis, Union Bank Building, Scranton. Owners, Wayne County Savings Bank, care of Mr. Fowler, Honesdale, Pa. Fireproof construction, 1 story and mezzanine, 55x90 feet, hollow tile, steel, wood and slag roof, electric light, tile, marble and terrazzo work, rolled steel skylights, roof ventilators, vault, bank fixtures, limestone front. Contract awarded to Shephard Const. Co., Miners' Bank Building, Wilkes-Barre, Pa.

**Church,** McAdoo, Pa. Architects, Morris & McHale, Mears Building, Scranton, Pa. Owners, Slavoc Roman Catholic Church, Rev. J. M. Borovec, McAdoo, Pa. Brick, 1 story and basement, 60x108 feet, slate roof, electric work. Contract awarded to Fred Schaar, Audenried, Pa.

**Residence (alts. and add.),** Wayne, Pa. Architect, C. A. Ziegler, 1309 Locust street, Philadelphia. Owner, William R. Verner, Huntingdon and Reese streets. Stone, 2½ stories, 28x20 feet, slate roof, oak and pine floors, central heating, electric lighting, tile work, iron work (hardware reserved). Contract awarded to H. E. Grau Co., 1707 Sansom street, Philadelphia.

**Bungalow,** Adams avenue, Scranton, Pa. Architect, Louis Reisman, Miller Building, Scranton, Pa. Owner, P. Miglierino, 1369 Adams avenue, Dunmore, Pa. Stucco, metal lath, 1½ stories, 48x29 feet, shingle roof, hardwood floors, electric lighting. Contract awarded to Arthur Raymond, Scranton, Pa.

**School (add. and alts.),** Pershing, Pa. Architect, A. J. Ward, County Bank Building, Scranton, Pa. Owners, South Abington School Board, C. Cook, Pershing, Pa. Frame, 2 stories, 30x40 feet, slag roof, pine floors (heating, plumbing, electric work reserved), metal lath roof ventilators, bond. Contract awarded to Peck Lumber Co., 107 East Market street, Scranton.

**Synagogue,** Mahanoy City, Pa. Architect, Louis Reisman, Miller Building, Scranton, Pa. Owner, care of A. Levine, Mahanoy City, Pa. Brick, limestone, 1 story, 25x75 feet, shingle roof, hardwood floors, steam heat, electric light. Contract awarded to J. C. Reiner, Mahanoy City, Pa.

**Store, Loft and Garage,** Scranton, Pa. Architect, Louis Reisman, Miller Building, Scranton, Pa. Owner, H. Jones, care of architect. Brick, steel, 2 stories, 40x170 feet, slag roof, hardwood and concrete floors (heating and electric work reserved), metal lath, hollow tile. Contract awarded to Lackawanna Const. Co., Scranton, Pa.

**Residence,** Kingston, Pa. Architects, Mack & Sahn, Coal Exchange Building, Wilkes-Barre. Owner, J. B. Wallace, Miners' Bank Building, Wilkes-Barre, Pa. Frame, 2 stories, 30x42 feet, shingle roof, hardwood floors, vapor heat, electric light, tile work. Contract awarded to O. J. Behrens & Son, 179 Blackman street, Wilkes-Barre, Pa.

**Store and Apartment,** Miners Mills, Pa. Architect, J. A. McGlynn, Simon Long Building, Wilkes-Barre, Pa. Owner, P. J. Boylan, Miners Mills, Pa. Frame, 2 stories, 22x54 feet, slag roof, hardwood and pine floors, steam heat, electric light. Contract awarded to Stanley Juzwiak, Parsons, Pa.

**Church,** Wilkes-Barre, Pa. Architect, T. H. Atherton, Coal Exchange Building, Wilkes-Barre. Owners, Baptist Tabernacle, care of

architect. Brick, steel, 1 story and basement, 52x80 feet (plumbing, heating, electric work reserved), slate roof, hardwood and concrete floors. Contract awarded to O. J. Behrens & Son, 179 Blackman street, Wilkes-Barre.

**Residence,** West Kingston, Pa. Architect, H. G. Cook, Miners Bank Building, Wilkes-Barre, Pa. Owner, H. Weigand, 43 Carlisle street, Wilkes-Barre, Pa. Brick, 2 stories, 36x45 feet, Spanish tile roof, hardwood floors, vacuum heat, electric light, metal lath. Contract awarded to A. M. Hildebrand, 91 Wood street, Wilkes-Barre.

**Church,** Duryea, Pa. Architects, Schroeder & Schmidt, Weitzenkorn Building, Wilkes-Barre. Owner, C. A. Steib, care of architects. Brick, 1 story and basement, 40x112 feet, slate roof, pine floors, metal lath, steam heat, electric light. Contract awarded to J. J. Gibbons, Avoca, Pa.

**Fire Engine House,** Plymouth, Pa. Architect, J. A. McGlynn, Simon Long Building, Wilkes-Barre, Pa. Owners, Borough of Plymouth, care of Commissioners, Plymouth, Pa. Frame or brick, 2 stories, 30x70 feet, concrete and maple floors (heating reserved), electric light, tile work, steel work. Contract awarded to A. Minkewicz, Plymouth, Pa.

**Store and Residence,** Lancaster, Pa., \$10,000. Architect, J. B. Harmon, 48 North Queen street, Lancaster, Pa. Owner, W. Bonn, 714 South Queen street, Lancaster, Pa. Brick, 2 stories, 22x76 feet, tin roof, pine floors, hot water heat. Contract awarded to L. Witmer, Ephrata, Pa.

**Silk Mill,** Columbia, Pa. Architect, J. B. Harmon, 48 North Queen street, Lancaster, Pa. Owners, Marietta Silk Mills, Marietta, Pa. Brick, steel, 1 story, 160x65 feet, gypsum roof, wood floors, vapor heat, electric light, roof ventilators, dampproofing, steel sash, skylights, fire doors. Contract awarded to Ivan L. Rohrer, R. D. 5, Lancaster, Pa.

**Public Comfort Station,** Central Square, Lancaster, Pa. Architect, M. R. Evans, 10½ East Orange street, Reading, Pa. Owners, City of Lancaster, J. W. Hetrick, chairman Building Committee, Woolworth Building, Harrisburg, Pa. Concrete, 60x60 feet, terrazzo and tile floors (heating, electric work and plumbing reserved), marble work, safety treads, waterproofing. Contract awarded to D. S. Warfel, 39 East Grant street, Lancaster, Pa.

**Club House (add.),** Harrisburg, Pa. Architects, Lawrie, Green & Co., Commonwealth Building, Harrisburg. Owners, Colonial Club, D. A. Caley, secretary, Kunkel Building, Harrisburg, Pa. Shower rooms, lockers, roof garden. Contract awarded to Charles Bushong, 1713 Boas street, Harrisburg.

## New Jersey Construction News

**Apartment House,** Prospect street, Trenton, N. J. Architect, William A. Kleeman, First National Bank Building, Trenton, N. J. Owner, Edmund D. Cook, Jr., Trenton, N. J. Brick, reinforced concrete and steel, 4 stories, 42x75 feet, slag roof, pine, oak and cement floors, electric lighting, metal lath, tile, marble and terrazzo work, iron work. Bids due May 14th.

**North Rosedale School,** Thirty-sixth and Cramer streets, Camden, N. J. Architects, Lackey & Hettle, 509 Market street, Camden, N. J. Owners, Board of Education, Room 12, City Hall, Camden, N. J., Elwood C. Bunting, Chairman of Building Committee. Reinforced concrete, brick, cut stone and steel, 3 stories, 159x95 feet, slag roof, concrete and pine floors, metal ceilings, waterproofing and damp-proofing, iron work, bond, hollow metal skylights, rolled steel sash, tile work (plumbing,

heating and lighting separate bids). Owners taking bids due May 21st at 2 P. M.

**High School (add.) and Grade School,** Moorestown, N. J. Architect, Frank Sanders, Pennsylvania Bank Building, Chester, Pa. Owners, Board of Education of Moorestown, Township, Leidy E. Klotz, District Clerk, Moorestown, N. J. Brick. Plans in progress.

**Schools (2),** Cedar Brook and Rosedale, N. J. Architect, Arnold H. Moses, Temple Building, Camden, N. J. Owners, Winslow Township School Board, H. Angelow, Berlin, N. J. Brick, 1 story, composition roof, pine floors. All bids rejected. Revised plans in progress. Architect will take new bids.

**Double Residence,** Trenton, N. J. Architects, William W. Slack & Son, St. Regis Theatre Building, Trenton. Owner, W. C. Slack, 900 Riverside Drive, Trenton, N. J. Stone, 2½ stories, 50x70 feet, slate roof, hardwood floors, tile and marble work, vacuum heat, electric light. Plans in progress.

**Residences (2),** Trenton, N. J. Architects, William W. Slack & Son, St. Regis Theatre Building, Trenton. Owner, Walter C. Slack, 900 Riverside avenue, Trenton, N. J. Brick, 2½ stories, 32x32 feet, slate roof, hardwood floors, tile work, vacuum heat, electric light. Plans in progress.

**Infirmiry (add.),** Trenton, N. J. Architect, A. B. Mills, State Capitol, Trenton, N. J. Owners, State Home for Girls, Dr. Harris, Trenton, N. J. Brick, hollow tile, 2½ stories, 26x40 feet, slate roof, tile and marble work, fireproof floors, waterproofing, dampproofing, iron stairs, ornamental iron work. Plans in progress.

**High School,** Hightstown, N. J. Architects, Guilbert & Betelle, 546 Broad street, Newark, N. J. Owners, Board of Education, Hightstown, N. J. Brick, concrete, steel, limestone and bluestone, 2 stories and basement, 160x45 feet, auditorium 72x61 feet, slag roof, cement floors, roof ventilators, metal weather strip, waterproofing and dampproofing, terra cotta, iron work and stairs, kalamain doors, rolled steel skylights, metal lath (heating, electric work and plumbing separate bids). Bids due May 15th.

**Apartment and Store,** Trenton, N. J. Architect, William Kleman, First National Bank Building, Trenton, N. J. Owner, Edward Cook, care of architect. Steel, semi-fireproof, 4 stories, 42x75 feet, slag roof, hardwood and reinforced concrete floors (heating, electric and plumbing reserved), metal lath, tile, marble and terrazzo work, cut stone. Architect taking bids due May 14th.

**Residence,** Trenton, N. J. Architect, William Kleman, First National Bank Building, Trenton, N. J. Owner, Dr. W. A. Taylor, 68 Prospect street, Trenton, N. J. Frame, 2½ stories, 28x28 feet, shingle roof, pine floors, hot water heat, electric light, tile work. Architect taking bids due May 11th.

**Segregation Cottage,** Jamesburg, N. J. Architects, Department of Institutions and Agencies, Division of Architecture and Construction, Trenton, N. J. Owners, State Home for Boys, C. Derrick, Jamesburg, N. J. Brick, reinforced concrete, 1 story, 60x92 feet, slate and slag roof, concrete floors, electric light, tile and marble work, rolled steel sash. Architects taking bids due May 18th.

**Office (add.),** Hanover street, Trenton, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owners, W. M. Dickinson Co., 145 East Hanover street, Trenton, N. J. Brick, steel, 1 story, 18x25 feet, slag roof, hardwood floors, heating extension, electric light, metal lath, rolled steel skylights. Architect ready for bids due May 11th.

**Stores (4), Apartments (4),** Vineland, N. J. Architect, M. Capobianco, 778 South Seventh street, Philadelphia. Owner, N. De Lemmo, 774 South Sixth street, Philadelphia, and Vineland, N. J. Brick, 2 stories, 80x80 feet,

slag roof, pine and hardwood floors, hot water heat, electric lighting, tile work, flush bulks. Plans completed. Ready for bids.

**Residence**, Kings Grove, Bridgeport, N. J. Architect, M. Capobianco, 778 South Seventh street, Philadelphia. Owner, Anthony Beato, 2976 Tilton street, Philadelphia. Brick, 2 stories, 18x50 feet, slag roof, pine floors, pipeless heat, electric lighting. Plans in progress.

## New Jersey

### Contracts Awarded

**Elementary and High School**, Oxford, N. J. Architects, William Slack & Son, St. Regis Theatre Building, Trenton, N. J. Owners, Oxford School Board, R. Trexler, Clerk, Oxford, N. J. Fireproof, brick, steel, 2 stories, 95x170 feet, slate roof, hardwood floors (heating, electric work and plumbing reserved), hollow tile, metal lath, tile, marble and terrazzo work, safety treads, roof ventilators, waterproofing and dampproofing, bond, skylights, iron stairs. Contract awarded to Karno-Smith Const. Co., Broad Street Bank Building, Trenton, N. J. Heating and ventilating awarded to Osman Co., Hackettstown, N. J. Plumbing awarded to Fred. Snyder, Phillipsburg, N. J. Electric awarded to Jackson Electric Company, Trenton, N. J.

**Bank and Office Building**, 26-28-30 West State street, Trenton, N. J. Architect, Alfred Bossom, 680 Fifth avenue, New York. Owners, Trenton Trust Co., H. A. Smith, president, on premises. Stone, brick, steel, reinforced concrete, 14 stories, 65x145 feet, flat roof, hardwood floors, electric light, elevators, roof ventilators. Contract awarded to Karno-Smith Const. Co., Broad Street Bank Building, Trenton, N. J.

**Bank Building**, Gloucester, N. J. Architects, Lackey & Hettle, 509 Market street, Camden, N. J. Owners, Gloucester City Trust Co., Gloucester, N. J. Brick, cut stone and reinforced concrete, 1 story, 70x48 feet, slag roof, cement floors, waterproofing and dampproofing, iron work, bond, tile work, metal lath, steam heat, electric light. Contract awarded to J. M. Yardley, 1716 Sansom street, Philadelphia.

**Club House**, Princeton, N. J. Architect, Albert Kelsey, Perry Building, Philadelphia. Owners, Cloister Inn Club, Princeton, N. J. Brick, 2½ stories, 67x84 feet, slate roof, hardwood floors, vapor vacuum heating, electric lighting. Contract awarded to Adams & Faber, 5 Hineck Building, Montclair, N. J.

**School**, Lapateong, N. J. Architect, E. H. Wenzelberger, 3 Centre Square, Easton, Pa. Owners, Lapateong School Board, William Debbitt, secretary, Lapateong, N. J. Brick, 2 stories, 45x140 feet, slate roof, hardwood floors (heating, plumbing and electric light reserved). Contract awarded to Thomas Bana-han, Phillipsburg, N. J.

## Miscellaneous

### Construction News

**Bank Building**, Newark, Delaware. Architect, Robert L. Harris, 13 West Saratoga street, Baltimore, Md. Owners, Farmers' Trust Co., M. Daugherty, Newark, Del. Brick, stone, steel, slate roof, tile and marble work. Plans in progress.

The man with an order to place doesn't hunt you up in the city directory these days. He hasn't the time. If he can't find you in your trade magazine he can and does find somebody else, and that somebody else books the order.

## ANNOUNCEMENT

# The Great Northern Steamship Co.

(Incorporated)

BOSTON, MASS.

Announces that Arrangements are Now  
Being Made for Monthly

**\$110 Round Trips to Europe**

Boston—Southampton

Boston—Gothenburg

**\$110**

**\$138**

ONE WAY \$65

ONE WAY \$75

Connecting for  
London, Liverpool, LeHavre

Connecting for  
Christiania, Stockholm, Helsingfors,  
Danzig, Riga, Copenhagen

THE ABOVE PRICES INCLUDE RAILROAD FARES TO POINTS AS FAR  
NORTH AS STOCKHOLM

The Company plans to carry approximately two thousand passengers monthly.  
Make your plans now for a trip during the coming season.

Lives of passengers will be protected by

**EVER-WARM SAFETY-SUITS**

which prevent drowning and protect from exposure

A round trip, with all expenses on ship-board included, at no more expense than a vacation right here at home! To meet the ever increasing demand in this country for an inexpensive and at the same time thoroughly comfortable and enjoyable trans-Atlantic voyage, is the prime object of the Great Northern Steamship Company. Organized by progressive business men who realize the exceptional opportunity offered now for inexpensive travel in Europe, the Company will cater to the thousands of in-

telligent persons who wish to visit the battlefields of France, the Shakespeare country, Scandinavia, the Land of the Midnight Sun, etc. A chance of a lifetime! So it would seem; but it is more than that. The company is building for a permanent business, setting a new standard of high-class ocean travel on a one-class basis. That this can be done at a fair margin of profit has already been proved and is further outlined in our prospectus. You'll find it extremely interesting.

**WE WILL ALSO SHOW YOU HOW YOU MAY  
BECOME A PART-OWNER IN THE MOST TALKED  
OF ENTERPRISE IN YEARS.**

Cut out and mail us with your name and address.

A. Wikstrom  
Information Dep't  
Edmunds Bldg., Suite 54  
Boston, Mass.

I am interested in securing full information regarding a trip to:

## Proposals

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 2, 1923. Sealed Proposals will be opened in this office at 3 P. M., May 25, 1923, for building roads and walks on the site of the United States Veterans' Hospital, at Oteen, N. C., in accordance with the specification and drawings, copies of which may be had from the Custodian at the hospital site, Oteen, N. C., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., May 3, 1923.—Sealed Proposals will be opened in this office at 3 P. M., May 24 1923, for painting and repairs at the United States Court House and Post Office at New York, N. Y. Specifications may be obtained from the Supervising Chief Engineer, 731 Custom House Building, New York, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

## BUILD BETTER HOMES AND REDUCE FIRE LOSSES

In its campaign for better homes, the National Lumber Manufacturers' Association has recently published a booklet containing much valuable data intended to emphasize the need of more efficient building construction, with special regard for the fire resistive features of a home.

It is a shameful indictment against the good name of this country, the lumber manufacturers say, that during the past fourteen years period fire losses were 28.1 per cent. of the value of new building construction. In 1920, although an abnormal amount of building was done, the fire losses were 23.5 per cent. of the value of new buildings. In other words there has been destroyed, annually, the equivalent of practically one-quarter of the amount expended for new construction. Fire losses in the United States in 1921 were more than half a billion dollars. Fire loss adjustments made by insurance companies in the United States and Canada during the past fourteen years amounted to \$3,410,752,600. The average yearly loss was \$243,625,200.

The loss for 1920 reached the staggering total of \$330,853,925, an amount which, if devoted to the erection of homes costing \$4000 each, would build enough houses to line both sides of a street stretching from New York to Chicago. Startling as these losses are, they do not tell the whole story. They represent only the actual insurance adjustments made. They do not take into account losses due to the fact that buildings are seldom insured for more than 80 per cent. of their full value, nor do they include losses not covered by in-

surance. The insurance adjustments made probably do not exceed 70 per cent of actual fire losses, including both insured and uninsured.

In explaining the purpose of this booklet, which is the first of a series on the subject of "Fire Prevention," the National Lumber Manufacturers' Association states that it hopes to bring before architects, home builders, owners, and occupants the truth that each is his brother's keeper; that no individual can live to himself alone; that all have a responsibility to the community at large. Personal liability for preventable fires is a practical application of that responsibility.

Other chapters to be published by the Association under copyright will be as follows: "Fire-Stopping in Dwelling Construction," being a description of various simple and inexpensive methods by which the spread of fire may be checked and confined to the space in which it originates; "Chimneys, Flues, and Fireplaces;" and "Household Heating and Lighting Hazards."

—*The Architect and Engineer.*

## BUREAU OF STANDARDS TO MEASURE FATIGUE OF STONE

It has long been known that a load much below its apparent breaking strength would cause failure of stone after a long time. The Bureau of Standards is now undertaking a series of tests to determine the extent of this effect and to see how much load can safely be borne by stone for indefinite periods.

Samples of stone will be tested both in straight compression and in bending. Loads will be put on and left there, and the deflection of the stone will be measured from time to time.

Marble has the peculiar quality of sagging slowly, even under its own weight. Thus many cases are known in which marble slabs placed in horizontal position for a hundred years or so have sagged down several inches; and thin tombstones of marble have bent over.

## DIAGONAL REINFORCEMENT SOMETIMES DESIRABLE IN CONCRETE SLABS

It would be natural to suppose that the most effective way of using steel for reinforcing concrete floors and other slabs would be to place it in the direction in which the stress was applied, and at right angles to the direction of probable cracks. Mathematical analysis of the problem confirms this assumption.

In the design of concrete ships, however, there were other considerations

which made it seem desirable to place the steel diagonally with respect to the direction in which the cracks were expected. Accordingly tests were made at the Bureau of Standards on slabs in which different types of reinforcement were used. These tests confirm, in a general way, the correctness of the mathematical analysis and show that the reinforcement should be laid parallel with the span and not at an angle with it; unless there are other factors, such as shrinkage in setting or expansion and contraction with change in temperature, which tend to produce cracks at right angles to those due to load stress.

But shrinkage and expansion occur in all concrete structures and frequently transverse reinforcement is required. Cracks from such causes may be prevented by the use of bars laid at an angle with the span, or by mat reinforcement.

In these tests it was found that the use of reinforcement having diamond shaped meshes distributed the cracks effectively and kept them smaller than was the case with the other types of reinforcement tested. About a 12-inch lap where the ends of these sheets of expanded metal joined was found necessary to prevent slipping of these splices.

The early close of the war rendered it unnecessary to apply the results of these tests to concrete ships; but the information acquired is likely to be of value in the design of buildings.

The results of these tests are published in Technologic Paper No. 233 of the Bureau of Standards, entitled "Tests of Heavily Reinforced Concrete Slab Beams: Effect of Direction of Reinforcement on Strength and Deformation." Copies of this paper can be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. The price is 15 cents.

**Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!**

**Ideals are like stars; you will not succeed in touching them with your hands. but like the seafaring man on the desert of waters, you choose them as your guides. and, following them, you reach your destiny.—Carl Schurz.**

**DAILY BUILDING NEWS**

**E**VERY morning you get the names and addresses of concerns in the market for what you sell. You also get complete information concerning work being planned, figured on and awarded

Instead of spending large sums locating prospects and losing valuable time running down rumors, the

**DAILY BUILDING NEWS**

directs you to orders, orders that will many times pay for the investment in these reports.

To subscribers there is also a time-saving telephone service that answers your inquiries promptly and authoritatively. This feature alone is worth more than the cost of the Daly Building News reports.

We would appreciate the opportunity of explaining further and showing you how you can profit by these reports and the advance information they supply. Why not today call, or phone for sample sheets or representative? You will not be obligated in any way.

# TRUSCON Agatex HARDENER

Shipped as dry Crystals, for making Concrete Floors Hard as Iron  
**THE TRUSCON LABORATORIES**

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not “sand” or crumble, even under the hardest foot traffic. Phone or write us for information.

Owners taking bids due June 1st at 3 P. M.

To be poor in a wealthy country, to be sick in a good climate, to be inefficient among a progressive people, is a sign of unwise educational methods. Such people were not taught to battle with the world or meet life's emergencies.—Thoreau.

## ANNOUNCEMENT

# The Great Northern Steamship Co.

(Incorporated)

**BOSTON, MASS.**

Announces that Arrangements are Now  
Being Made for Monthly

**\$110 Round Trips to Europe**

**Boston—Southampton**

**Boston—Gothenburg**

**\$110**

**\$138**

**ONE WAY \$65**

**ONE WAY \$75**

Connecting for  
London, Liverpool, LeHavre

Connecting for  
Christiania, Stockholm, Helsingfors,  
Danzig, Riga, Copenhagen

**THE ABOVE PRICES INCLUDE RAILROAD FARES TO POINTS AS FAR  
NORTH AS STOCKHOLM**

The Company plans to carry approximately two thousand passengers monthly.  
Make your plans now for a trip during the coming season.

**Lives of passengers will be protected by  
EVER-WARM SAFETY-SUITS  
which prevent drowning and protect from exposure**

A round trip, with all expenses on ship-board included, at no more expense than a vacation right here at home! To meet the ever increasing demand in this country for an inexpensive and at the same time thoroughly comfortable and enjoyable trans-Atlantic voyage, is the prime object of the Great Northern Steamship Company. Organized by progressive business men who realize the exceptional opportunity offered now for inexpensive travel in Europe, the Company will cater to the thousands of in-

telligent persons who wish to visit the battlefields of France, the Shakespeare country, Scandinavia, the Land of the Midnight Sun, etc. A chance of a lifetime! So it would seem; but it is more than that. The company is building for a permanent business, setting a new standard of high-class ocean travel on a one-class basis. That this can be done at a fair margin of profit has already been proved and is further outlined in our prospectus. You'll find it extremely interesting.

**WE WILL ALSO SHOW YOU HOW YOU MAY  
BECOME A PART-OWNER IN THE MOST TALKED  
OF ENTERPRISE IN YEARS.**

Cut out and mail us with your name and address.

## Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., May 7, 1923. Sealed Proposals will be opened in this office at 3 P. M., June 4, 1923, for the construction, including mechanical equipment, of the United States Post Office at Leesburg, Va. Drawings and specifications may be obtained from the Custodian of the site at Leesburg, Va., or at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

### IMMIGRATION LEGISLATION

**T**HE following outline has been prepared as an aid to the membership of the Associated General Contractors in discussing the subject of immigration:

#### *The Present Situation*

That we may more readily understand the present unsatisfactory working of our immigration laws and appreciate the imperative need for an immediate change, let us review briefly the present regulations.

The present immigration law was passed and became effective June 1, 1921. It restricts the annual immigration from countries of the Old World to 3 per cent. of each nationality resident in this country as shown by the 1910 census. It was enacted for the purpose of reducing the number of immigrants and it certainly has been effective in its operation. The net male immigration since its enactment has been less than the number of men returning to Europe from America. The law is very rigid and does not permit the making up of the deficiency in one class from that of a class whose quota is not used up, thereby not only cutting down the number of immigrants, but also turning away many desirables from nations where the quota is filled, and admitting undesirables where the quota has not been filled. In short, in its operation and net results it amounts to an exclusion act.

#### *Our New Policy and What It Should Be*

Congress is expected to draft a new immigration law. In drafting it they should be guided by the wishes and judgment of those who hold uppermost and of prime importance, the needs of America as a nation and the industrial situation from a national standpoint.

The following principles are considered fundamental by a large group of our citizens, from all walks of life, who have given the subject serious and conscientious study. You can assist in bringing about the necessary change by giving publicity to these principles and urging your representatives in Congress to see that they are incorporated in any new legislation.

### *Fundamental Principles*

1. Immigration should be regulated and selected both in quantity and in quality.
  2. No more immigration should be admitted of any nationality than we can wholesomely assimilate and in a reasonable length of time wisely incorporate into our body politic.
  3. No more immigration should be admitted than can find steady and useful employment without endangering normal American standards of life, labor and wages.
  4. The numerical regulation of immigration should be flexible. When industrial depression sweeps the country, all labor immigration should be promptly stopped. But the doors should again be opened when prosperity returns. It should be possible to take either step without waiting for special Congressional action.
  5. The closing and opening of our doors should be scientific. It should be based on assured and accurately compiled facts and statistics from every part of the country.
  6. The law should be general. The principles should be applied equally to every nation and people without arbitrary discrimination.
  7. The law should be courteous to all. It should be possible, without humiliating any, to exclude completely particular types of immigration which definite experience shows to be difficult to assimilate and absorb.
  8. The law should provide for the sending of expert examiners to the lands from which immigration mostly comes—this for the sake of both prospective immigrants and of our own land.
  9. The law should make possible a wise distribution of new immigration. The flow should be restricted or entirely stopped from given peoples, to already congested areas, and encouraged to go to those parts of America where it is desired.
  10. The new immigration policy should be distinctly patriotic. It should favor immigration from peoples easily assimilated and check it from other lands. It should guarantee equal treatment and a square deal to all aliens now in the United States. It should provide for higher standards for naturalization and then grant the privileges of citizenship to all who qualify. It should look to the creation of a substantially homogeneous people having a common mind, and a wholesomely functioning democracy.
- For the purpose of administering a law based on and containing the above principles there should be created a Federal Immigration Board who, by co-operation with the Departments of Agriculture, Commerce, Labor, State and Interior, could have accurate information concern-

ing the economic needs in each State and limit immigration to such people who are actually needed and such races as their experience had shown can be most readily assimilated.

The work of the Board would be augmented by the sending of expert examiners, to the lands from which immigration mostly comes—who would select not only by the present standards of moral, intellectual and physical fitness but also their fitness for the industrial needs of the country.

This Board could, by reason of their intimate and accurate knowledge of the needs of the different sections of the country, so direct the distribution of immigration that all needs would be supplied and the already congested districts relieved.

An immigration law incorporating these principles and administered in the light of the facts and experience of our national life as gathered by our governmental departments would be fitted to effectively deal with the changing industrial conditions and also with the larger and more intricate problem of population composition.

The present restrictive immigration law expires on June 30, 1924, and Congress no doubt will soon consider and enact a new law. There are some members who believe that immigration should be further restricted and are preparing to offer such a law and we must be alert if we expect relief from the present unsatisfactory conditions.

This is the most important question now facing the country, and if citizens from all sections show a lively and determined interest at this time, it is more than likely we can secure a fair practical and workable law, but if they do not, the chances are very strong that immigration will be further restricted.

For more data see article on immigration in the November, 1922, *Constructor*, (By Gen. Marshall,) INDEX of September 2, 1922, and the April 14 1923, issue of the Magazine of Wall Street, containing "Labor Shortage, Booming Wages and Ascending Prices," by General Marshall.

**It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.**

## ANNOUNCEMENT

# The Great Northern Steamship Co.

(Incorporated)

BOSTON. MASS.

Announces that Arrangements are Now  
Being Made for Monthly

**\$110 Round Trips to Europe**

**Boston—Southampton**

**Boston—Gothenburg**

**\$110**

**\$138**

**ONE WAY \$65**

**ONE WAY \$75**

Connecting for  
London, Liverpool, LeHavre

Connecting for  
Christiania, Stockholm, Helsingfors,  
Danzig, Riga, Copenhagen

THE ABOVE PRICES INCLUDE RAILROAD FARES TO POINTS AS FAR  
NORTH AS STOCKHOLM

The Company plans to carry approximately two thousand passengers monthly.  
Make your plans now for a trip during the coming season.

Lives of passengers will be protected by  
**EVER-WARM SAFETY-SUITS**

which prevent drowning and protect from exposure

A round trip, with all expenses on ship-board included, at no more expense than a vacation right here at home! To meet the ever increasing demand in this country for an inexpensive and at the same time thoroughly comfortable and enjoyable trans-Atlantic voyage, is the prime object of the Great Northern Steamship Company. Organized by progressive business men who realize the exceptional opportunity offered now for inexpensive travel in Europe, the Company will cater to the thousands of in-

telligent persons who wish to visit the battlefields of France, the Shakespeare country, Scandinavia, the Land of the Midnight Sun, etc. A chance of a lifetime! So it would seem; but it is more than that. The company is building for a permanent business, setting a new standard of high-class ocean travel on a one-class basis. That this can be done at a fair margin of profit has already been proved and is further outlined in our prospectus. You'll find it extremely interesting.

**WE WILL ALSO SHOW YOU HOW YOU MAY  
BECOME A PART-OWNER IN THE MOST TALKED  
OF ENTERPRISE IN YEARS.**

Cut out and mail us with your name and address.

## NEW YORK BUILDERS FACE COST FACTS

*Contractors, Architects, Bankers and Real Estate Men Hold Conference On Present Situation*

Alarmed by the threatened crisis in the building industry, more than one hundred of the leading architects, contractors, builders, real estate dealers and bankers of New York met in the Engineering Societies' building on Monday, April 30, for the purpose of devising some plan that would mitigate the acuteness of the situation.

The meeting was called to order by W. S. Faddis, president of the Building Trades Employers' Association, and of Cauldwell-Wingate Company, who turned the meeting over to Harold M. Shreve Carrere and Hastings, architects, as chairman.

Mr. Shreve stated that his firm was discouraging new building ventures and that no builder could give to owners a satisfactory idea of prices or the time required for completing a project. He called on Professor Louis H. Hainey, director of the Bureau of Business Research of New York University, who said that a buyers' strike with regard to residences is already upon us and mentioned instances of construction companies which had discontinued operations. He said that the people are beginning to wait just as they did in 1920.

R. F. Brown of the J. W. Bishop Company, told of a large operation started in February, paying bricklayers the regular scale of \$10 a day. On March 30 a dollar bonus had to be added. On April 23, \$12 a day was demanded; on the same day, \$13; and half an hour later, \$14. Common labor made corresponding demands.

F. B. Rogers of Fred T. Ley Company, Inc., told of a conflict between bricklayers and the piping trades over the cutting of arches in concrete, after which the bricklayer struck for \$12 a day, and, a few days later, \$14, causing an incalculable loss not only in money, but also in the progress of the building.

### *Early Contracts of No Avail*

Wm. J. Taylor of the Wm. J. Taylor Company reported a demand for \$14 which he had to meet, otherwise the bricklayers would have gone to Cleveland where \$14 had been offered them, with free board and transportation.

Robert C. Whiting of the George A. Fuller Company reported wage demands made on his company and said the "snow-balling" process was well under way.

C. G. Norman, chairman of the Board of Governors of the Building Trades Employers' Association, said that in 1914 building operations in the United States amounted to, roughly \$1,250,000,000, and that the contemplated building for 1923 was \$5,000,000,000 with no appreciable increase in the number of bricklayers.

Mr. Norman added that the efficiency of labor under higher wages showed a marked decline and that the union men could not be held in check by their own leaders.

D. Everett Waid, architect, considered that the situation was mainly due to the law of supply and demand and that so far as the demand was real and not artificial, there could be no other remedy but to stop operations. He felt that the workers could hardly be blamed for following the example of business men by raising prices when the demand was high.

W. J. Barney, of the Barney-Ahlers Company, brought up the question of the constantly increasing difficulty in obtaining delivery of materials. He said that a contract for steel made last January at prices used in the estimate was of little avail, as delivery cannot be secured without premium and heavy expense for tracing cars and expediting deliveries. Sand and gravel dealers contracted in December to deliver material at \$2.50, but of what value is that contract when they are deluged with orders at \$3.50 and even \$4.00?

### *Declares Prompt Relief Necessary*

"The manufacturer of materials, like the laborer, is human, and will find a way to make deliveries to the last man who pays him best, so that your costs are skying not only from the more dramatic demands of labor but also from the higher prices of materials and deliveries. Where you think you are protected by a lump sum contract against these rising costs you will find your contractors, however strong financially, compelled to make the safer choice of shutting down their work and arbitrating with you as to responsibilities for delays, rather than assuming the ever mounting costs. The bricklayer and his demands are but the first of a long procession."

### *Joint Action Is Urged*

Mr. Barney compared the business of the country to a long train pulled by the locomotive of the building industry. If relief were not promptly given the building industry, he declared, the train would stop and possibly slip down the grade to the depression from which it had climbed. There was no desire to stop building construction, he said, but joint action of all interests affected was necessary to solve the problem in such a way that would do the least harm to the public, the banker, the owner, the contractor and the laborer.

Otto M. Eidlitz declared that with the unprecedented amount of work to be done and not enough labor available, the builder was not in control of the situation.

Truman S. Morgan, president of F. W. Dodge Corporation, thought that while

the situation was distressing and perhaps somewhat alarming, he felt that there was no real ground for panic. He said that before going to the meeting he had hastily assembled a few figures which showed that 'contracts awarded in territory covered by the Dodge service amounted to about the same in April as in March, but \$14,000,000 of the April contracts are due to an exceptional increase in the Chicago district. If we leave that out of consideration, we are running below last month.

### *A Notable Decline in New York*

"In greater New York I find \$50,000,000 against \$57,000,000 in March showing a 14 per cent. decline which is particularly marked when contrasted with last year, when the March figures were \$61,000,000 and the April figures \$78,000,000 nearly 20 per cent larger than those for the same months this year.

"In May last year Greater New York contracts totaled \$51,000,000, a reduction of 35 per cent. from April, and if this May follows a similar course, Greater New York figures will be found in the \$30,000,000's.

"While, therefore, no stone should be left unturned to improve present adverse conditions and to guard against their recurrence, it may prove that we have about reached the peak of our present troubles."

C. H. Kelsey of the Title Guaranty and Trust Company, said: "Limiting the demand for labor by cessation of building will not permanently solve the problem. We must seek to increase the supply of adequately trained labor. Apprentice schools should be established. The law of supply and demand is inexorable. I do not feel that this problem will be solved until the open shop principle has been established."

Percy Strauss of R. H. Macey and Company said: "Such remedies as the open shop and changes in the immigration laws are 'long haul' remedies. The need now is an immediate plan and I feel that study looking toward this should be entered upon at once."

R. D. Kauffman of S. W. Strauss and Company said: "The loaning institutions should take serious consideration of the existing situation. The facts should be given the utmost publicity, but this publicity should emanate from entirely disinterested parties."

### *Name Committee to Formulate Policy*

The outcome of the meeting was the appointment of a committee of fifteen to formulate a policy. The committee will consist of three members from each of the following: builders, bankers, owners, architects, and general industry.

ESTIMATOR WANTED, for excavating and stone work, part time. Apply B-100, Builders' Guide, Perry Building, Philadelphia.

bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$3,500.

Northampton County, A-2202 and 2203, Hanover and East Allen Townships, 22,866 feet. One course reinforced concrete. Certified check, \$4,000.

York County, R-216, Sec. 3, A-2175, Lower Chanceford Township, 26,812 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$4,000.

Owners taking bids due the same date for resurfacing the following roads:

Armstrong County, R-69, and Butler County, R-70, South Buffalo Township, Buffalo Township, 14,368 feet. Bituminous macadam, penetration method on reconstructed base course. Certified check, \$1,500.

Berks County, R-141, Tilden Township, 21,666 feet. Bituminous macadam, penetration method, on reconstructed base course. Certified check, \$2,500.

Butler County, R-73, Center and Butler Townships, 11,202 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$2,000.

Westmoreland and Fayette Counties, Route 247, Rostraver Township and Washington Township, 12,262 feet. Either bituminous macadam, penetration method, or bituminous surface course on reconstructed base course. Certified check, \$1,200.

Fayette County, R-117, North Union Township, 8,374 feet. Either bituminous macadam, penetration method or bituminous surface course on reconstructed base course. Certified check, \$1,000.

Luzerne County, R-170, Fairview and Hanover Townships, 19,618 feet. Bituminous macadam, penetration method, on reconstructed base course. Certified check, \$2,000.

Lycoming County, R-18, Loyalsock Township, 11,400 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$2,000.

Northampton County, R-175, Upper Nazareth Township, 20,586 feet. One course reinforced concrete. Certified check, \$2,500.

Columbia and Northumberland Counties, R-161, Conyngham and Mount Carmel Townships, 8,024 feet. Bituminous macadam penetration method on reconstructed base course. Certified check, \$1,000.

Washington County, R-108, North and South Strabane Townships, 16,413 feet. Either bituminous macadam penetration method or bituminous surface course on reconstructed base course. Certified check, \$2,000.

Westmoreland County, R-69, Hempfield Township, 10,300 feet. Either bituminous macadam penetration method or bituminous surface course on reconstructed base course. Certified check, \$1,500.

**Road Work**, Pennsylvania. Owners, State Highway Department, Harrisburg, Pa. Owners taking bids due June 8th, at 10 A. M., for

construction of following roads. Plans, \$2.50 per set. Forms and specifications free.

Beaver County, R-204, A-1942, Chippewa and Patterson Townships, 7,979 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$1,500.

Beaver County, A-1950, Hopewell Township, 5,147 feet. One course reinforced concrete. Certified check, \$1,500.

Clarion County, A-2218, Washington Township, 5,766 feet. One course reinforced concrete. Certified check, \$1,500.

Clarion County, R-214 and 311, Sligo Borough, 5,187 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$1,000. (Also appli. 2326.)

Dauphin County, A-2025, Derry and Londonderry Townships, 22,890 feet. Either one course reinforced concrete or one course reinforced concrete and bituminous macadam penetration method on broken stone base. Certified check, \$4,000.

Erie County, R-304, A-2339, Amity Township, 12,508 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$2,000.

Northampton County, A-2309-2310, East Allen and Hanover Townships, 15,537 feet. One course reinforced concrete. Certified check, \$2,500.

Northampton County, R-165, R-166, A-2005, Wind Gap Borough, 13,627 feet. Either bituminous surface course on concrete foundation and hillside vitrified brick or one course reinforced concrete and hillside vitrified brick. Certified check, \$2,500.

Somerset County, R-50, A-2268-2269, Confluence Borough, 2,875 feet. One course reinforced concrete. Certified check, \$1,000.

Owners taking bids due June 8th for resurfacing the following roads:

Blair County, R-53, Juniata, Blair and Allegheny Townships, 26,018 feet. Bituminous macadam penetration method on reconstructed base course. Certified check, \$2,500.

Bucks County, R-281, Middletown Township, 22,080 feet. Bituminous macadam penetration method on reconstructed base course. Certified check, \$2,500.

Bucks County, R-152, Doylestown and Buckingham Townships, 16,803 feet. Bituminous macadam penetration method on reconstructed base course. Certified check, \$1,500.

Butler County, R-73, Mercer Township, 10,548 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$1,500.

Fayette County, R-247, Perry and Dunbar Townships, 23,849 feet. Either bituminous macadam penetration method or bituminous surface course on reconstructed base course. Certified check, \$2,500.

Greene County, R-111, Franklin Township, 12,017 feet. Either bituminous macadam penetration method or bituminous surface course on reconstructed base course. Certified check, \$1,200.

Northumberland County, R-161, Coal Township, 17,858 feet. Bituminous macadam penetration method on reconstructed base course. Certified check, \$1,500.

Tioga County, R-196, Richmond and Covington Townships, 13,977 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$2,000.

Westmoreland County, R-118, Hempfield Township, 23,917 feet. Either bituminous macadam penetration method or bituminous surface course on reconstructed base course. Certified check, \$2,500.

## Pennsylvania Contracts Awarded

**Monygroes Cottage**, Bryn Mawr, Pa. Architects, Price & Walton, 119 South Fourth street, Philadelphia. Owner, Marion Edwards Park, Bryn Mawr, Pa. Frame, 1 story, 15x30 feet, second story, 15x20 feet, heating alts., shingle roof, hardwood floors, tile work, new partitions, carpentry and mill work, painting and glazing. Contract awarded to R. C. Ballinger, 925 Walnut street, Philadelphia.

**Residences**, Brookline, Pa. Architect, J. W. Thompson, 703 South Sixtieth street, Philadelphia. Owner, Arlington Evans, West Philadelphia High School for Boys, Forty-eighth and Walnut streets, Philadelphia. Stone and stucco, 2½ stories, 25x40 feet, shingle roof, hardwood and pine floors, hot water heat, electric light, tile work. Contract awarded to Reed & Reed, Drexel Hill, Pa.

**Residences (9)**, Lansdowne, Pa. Architect, J. W. Thompson, 703 South Sixtieth street, Philadelphia. Owner, name withheld. Stone, brick and hollow tile and stucco, 2½ stories, 25x36 feet, shingle roof, hardwood floors, hot water heating, electric lighting, tile work. Contract awarded to Edward Harris Smith, Lansdowne, Pa.

**Stable**, Villa Nova, Pa. Architects, Karcher & Smith, 34 South Seventeenth street, Philadelphia. Owner, Morris Clothier, Villa Nova, Pa. Stone, 1 story, slate roof, electric light. Contract awarded to Millard N. Croll, Radnor, Pa.

**Store (alts. and add.)**, Second street, Harrisburg, Pa. Architect, F. G. Fahnestock, Patriot Building, Harrisburg, Pa. Owners, Hoover Furniture Co., 1415 North Second street, Harrisburg. Brick, 3 stories, 45x50 feet, slag roof, pine floors, electric work. Contract awarded to C. W. Strayer, Market Square, Harrisburg.

**Road Work**, Pennsylvania. Owners, State of Pennsylvania State Highway Department, Harrisburg, Pa.

Monroe County, A-3141, Smithfield Township. Low bidder: to John F. Gill Co., Wayland, N. Y., \$92,994.75.

Northampton County, A-2145, Tatamy Borough and Palmer Township. Contract awarded to Ambler Davis Co., Philadelphia, Pa., \$61,758.

Northampton County, Appli. 2231, Nazareth Borough. One course reinforced concrete, \$42,379.20. Contract awarded to Neumeyer Brothers, Bethlehem, Pa.

**Residence**, York, Pa. Architect, H. E. Yessler, Schmidt Building, York, Pa. Owner, F. R. Zinn, York, Pa. Stucco, 2½ stories, 35x25 feet, shingle roof, hardwood floors, hot water heat, electric light, tile work. Contract awarded to W. E. Henry, York, Pa.

## New Jersey Construction News

**Grand Stand**, Virginia and Magellan avenues, Atlantic City. Architects, Dobbins & Schmidt, Segal Building, Atlantic City, N. J. Owners, Atlantic City Kennel Club, Segal Building, Atlantic City. Frame, concrete, 1 story, 45x252 feet, rubberoid roof. Plans in progress.

**Apartment**, Dover and Atlantic avenues, Atlantic City, N. J. Architects, Dobbins & Schmidt, Segal Building, Atlantic City. Owners, Shapiro Knoll Gold Co., Atlantic City, N. J. Brick, steel, 3 stories, 45x95 feet, slag roof, hardwood floors, vapor heat, electric light, tile and marble work. Plans in progress.

**Twin Residences (24)**, Atlantic City, N. J. Architects, Dobbins & Schmidt, Segal Building, Atlantic City, N. J. Owner, H. J. Gold, 1309 Atlantic avenue, Atlantic City, N. J. Frame and stucco, 2 stories, 32x42 feet, slag roof, hardwood floors, hot water heat, electric light, tile work. Owner will build.

**Residences (12)**, Andover Gardens, Atlantic City, N. J. Architects, Dobbins & Schmidt, Segal Building, Atlantic City, N. J. Owner, Nathan Whiteman, Atlantic City, N. J. Brick, 2 stories, 30x42 feet, tile roof, hardwood floors, hot water heat, electric light, tile work. Owner taking sub-bids.

**Residence and Garage**, Ventnor, N. J. Architect, Samuel Abramson, 2313 Walnut street, Philadelphia. Owner, Harry Weiss, care of architect. Hollow tile, stucco and brick, 2½ stories, 36x65 feet, and 1 story, 10x20 feet, Spanish tile roof, hardwood floors, modulated system of heating, electric lighting, tile and marble work, cement work. Architect taking bids due June 5th.

**Infirmiry**, Princeton, N. J. Architects, Day & Klauder, Franklin Building, Philadelphia. Owners, Princeton University, Princeton, N. J. Reinforced concrete, stone, steel, bluestone, limestone, 3 stories and ground, 150x100 feet, steam heating, electric lighting, metal lath, tile and marble work, fire and kalamein doors, bond, slate roof, cement floors, linoleum, terra cotta, hollow tile, plumbing, iron stairs, ornamental iron work. Architects taking sub-bids.

**Bank Building (add.)**, Atlantic City, N. J. Architect, J. Vaughn Mathis, Guarantee Trust Building, Atlantic City. Owners, Guarantee Trust Company, care of architects. Brick, steel, concrete, 7 stories add., 150x100 feet, tile floors, metal lath, electric light, tile and marble work, terra cotta. J. Mathis & Son, Guarantee Trust Building, Atlantic City, N. J., taking sub-bids.

**School**, Morrisville, N. J. Architects, Fowler & Seaman, Fitzcharles Building, Trenton, N. J. Associate architect, T. B. Stockham, Morrisville, N. J. Owners, Morrisville School Board, Mr. Taylor, secretary, Morrisville, N. J. Brick, hollow tile, steel, 2 stories and basement, 45x170 feet, tile roof, yellow pine floors (heating, plumbing and electric work reserved), hollow tile, metal lath, safety treads, roof ventilators, rolled steel sash, fire doors, bond, steel stairs, ornamental iron work, metal ceilings, waterproofing and damp-proofing. Owner ready for bids due June 13th.

**Tuberculosis Infirmiry Building (add.)**, Glen Garden, N. J. Architects, Department of Institutions and Agencies, Division of Architecture and Construction, Trenton, N. J. Owners, Board of Managers, care of Dr. English, Glen Garden, N. J. Hollow tile and stucco, 2 stories, 30x83 feet, tin roof, reinforced concrete and tile floors, electric light, tile work. Architect taking bids due June 7th.

**School**, Westville, Gloucester County, N. J.

Architect, H. A. Hill, Broad Street Bank Building, Trenton, N. J. Owners, Depford Township School Board, H. I. Clement, Westville, N. J. Brick, 1 story and basement, 6 rooms (heating, plumbing and electric work reserved), shingle roof, maple floors, hollow tile, metal lath. Owners taking bids due June 1st.

**Theatre**, Westville, N. J. Architect, J. E. Sindoni, 1905 South Sixteenth street, Philadelphia. Owner, B. A. Harrison, Westville, N. J. Cement block, brick and stucco, 1 story, 39x102 feet, steam heat, slag roof, electric light, pine floors, roof ventilators, hollow metal skylights, kalamein doors, metal ceilings. Owner taking bids.

**North Rosedale School**, Thirty-sixth and Cramer streets, Camden, N. J. Architects, Lackey & Hettle, 509 Market street, Camden, N. J. Owners, Board of Education, Elwood C. Bunting, chairman, Building Committee, and A. Austermuhl, secretary of Board, Camden, N. J. Lowest bidders: General, H. John Homan, Seventeenth and Chestnut streets, Philadelphia, \$264,500; Fred Lang, Audubon, N. J., \$288,973. Electric, Nagel Elec. Co., 263 South Sixtieth street, Philadelphia, \$5,580. Heating, Deckmann Heating Co., Camden, N. J., \$18,493. Plumbing, Lionel Simpson, 816 Division avenue, Camden, \$12,647.50.

**Police and Fire Station (alts. and add.)**, Atlantic City, N. J. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City. Owners, City of Atlantic City, E. L. Baker, City Hall, Atlantic City, N. J. Lowest bidder: Wilbert Beaumont, 1 South Tennessee avenue, Atlantic City, N. J.

**Grade School**, Lenola, N. J. Architect, Frank Sanders, Penn Bank Building, Chester, Pa. Owners, Board of Education, Moorestown, N. J., L. E. Klotz, District Clerk, Moorestown, N. J. Low bidders: George W. Shaner & Son, Palmyra, N. J., \$69,880; Chester Const. & Cont. Co., Chester, Pa., \$74,500.

**High School (add.) and Grade School**, Moorestown, N. J. Architect, Frank Sanders, Penn Bank Building, Chester, Pa. Owners, Board of Education of Moorestown, L. E. Klotz, District Clerk, Moorestown, N. J. Low bidders: Chester Const. & Cont. Co., Chester, Pa., \$50,000; George W. Shaner & Son, Palmyra, N. J., \$51,400.

## New Jersey Contracts Awarded

**Telephone Building**, Seventh and Federal streets, Camden, \$1,000,000. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Bell Telephone Co., Seventeenth and Parkway, Philadelphia. Brick, limestone, concrete and steel, 3 stories and basement, 136x140 feet, slag roof, concrete floors, steam heat, electric light, hollow tile, metal lath, tile, marble and terrazzo work, hollow metal sash, bond, waterproofing, iron stairs and ornamental iron work. Contract awarded to Irwin & Leighton, 126 North Twelfth street, Philadelphia.

**Male and Female Ward**, Insane Asylum, Northfield, N. J. Architect, J. Hudson Vaughn, Guarantee Trust Building, Atlantic City. Owners, Atlantic County, Fred W. Willets, Clerk, Guarantee Trust Building, Atlantic City, N. J. Brick, 3 stories, 32x80 feet each, slate roof, pine floors. Contract awarded to A. D. Brown, 1 South Delancey street, Atlantic City. Plumbing and heating to Frank Walsh, 908 Atlantic avenue, Atlantic City, N. J. Electric work, to Electrical Equipment Co., 16 North Ohio avenue, Atlantic City, N. J.

**Store, Post Office and Apartments**, Moorestown, N. J. Architect, Byron H. Edwards, 34

South Seventeenth street, Philadelphia. Owner, Mr. Wolf, Moorestown, N. J. Brick and castone, 2 stories, 97x62 feet, slag and tin roof, cement and pine floors, hot water heat, electric light, metal lath, hollow metal skylights, bond, iron work. Contract awarded to Harry Vennell, Moorestown, N. J.

**Residence**, Haddonfield, N. J., \$12,000. Architect, Byron H. Edwards, 34 South Seventeenth street, Philadelphia. Owner, William E. Haden, Haddonfield, N. J. Frame and stucco, 2½ stories, 40x25 feet, hot water heat, electric light, tile work, asphalt shingle roof, hardwood floors. Contract awarded to Mal-Bal Const. Co., 2620 Bonnafon street.

**Residence**, Haddonfield, N. J., \$9,000. Architect, Byron H. Edwards, 34 South Seventeenth street, Philadelphia. Owner, Mrs. Louise Bell Rau, Haddonfield, N. J. Frame, 2½ stories, 39 feet 4 inches x 24 feet 2 inches, hot air heat, electric light, tile work, asphalt shingle roof, yellow pine floors. Contract awarded to Mal-Bal Const. Co., 2620 Bonnafon street.

**Church**, Willow street, Trenton, N. J. Architect, R. A. Schumann, 202 West State street, Trenton, N. J. Owners, St. Paul's A. M. E. Z. Church, Rev. I. B. Turner, 304 North Willow street, Trenton, N. J. Stone, brick, 1 story and basement, 46x75 feet, slate roof, hardwood floors, steam heat, electric light, metal lath. Contract awarded to Woodland Const. Co., 5905 Woodland Avenue, Philadelphia.

**Display Room (alts.)**, Delaware avenue and Boardwalk, Atlantic City, N. J. Architect, D. A. Rosenstein, Humphreys Building, Atlantic City. Owners, Ruud Heater Mfg. Co., care of architect. General interior alterations, plate glass, tile work. Contract awarded to Samuel Headley, Guarantee Trust Building, Atlantic City, N. J.

**Residence and Garage**, Atlantic City, N. J. Architect, J. Ethan Fieldstein, Otis Building, Philadelphia. Owner, Mrs. F. W. Kuh, Atlantic City, N. J. Brick, 2½ stories, 52x40 feet, slate roof, hardwood floors, hot water heat, electric light, tile work. Contract awarded to Morrell S. Bowen, 46 North Montgomery avenue, Atlantic City, N. J.

**Ice Storage House**, Woodstown, N. J. Architect, W. F. Koelle, Twenty-sixth and Oxford streets, Philadelphia. Owners, Woodstown Ice & Coal Co., Woodstown, N. J. Brick, 1 story, 42x64 feet, slag roof, cement floors. Contract awarded to W. F. B. Koelle Co., Twenty-sixth and Oxford streets.

## Miscellaneous Construction News

**Church (alt. and adds.)**, Dover, Delaware. Architect, Norman Hulme, 1524 Chestnut street, Philadelphia. Owners, People's Christian Church, care of Rev. R. C. Helfenstein, Dover, Delaware. Brick, 1 story, 94x40 feet, steam heat, tile work, slag roof. Plans in progress. Architect will take bids in two weeks.

**Residence (alts. and add.)**, Delaware avenue, Wilmington, Del. Architect, E. C. May, Dupont Building, Wilmington, Del. Owner, Spottswood Garland, 2300 Delaware avenue, Wilmington. Brick, stucco, 2 stories, 12x16 feet, slag roof, hardwood floors, heating extension, electric light, general alterations. Architect ready for bids.

**Club House**, location withheld. Architect, C. R. Hope, Dupont Building, Wilmington, Del. Owners, Dupont Country Club, care of Dr. H. Bradshaw, Dupont Building, Wilmington, Del. Stone, 1 story and basement, 81x45 feet, slag roof, hardwood floors, steam heat.

## ANNOUNCEMENT

# The Great Northern Steamship Co.

(Incorporated)  
BOSTON, MASS.

Announces that Arrangements  
Being Made for Monthly

**\$110 Round Trips to Europe**  
Boston—Southampton      Boston—Gothenburg

**\$110**  
**ONE WAY \$65**

Connecting for  
London, Liverpool, LeHavre

**\$138**  
**ONE WAY \$75**

Connecting for  
Christiania, Stockholm, Helsingfors,  
Danzig, Riga, Copenhagen

THE ABOVE PRICES INCLUDE RAILROAD FARES TO POINTS AS FAR  
NORTH AS STOCKHOLM

The Company plans to carry approximately two thousand passengers monthly.  
Make your plans now for a trip during the coming season.

Lives of passengers will be protected by  
**EVER-WARM SAFETY-SUITS**  
which prevent drowning and protect from exposure

A round trip, with all expenses on ship-board included, at no more expense than a vacation right here at home! To meet the ever increasing demand in this country for an inexpensive and at the same time thoroughly comfortable and enjoyable trans-Atlantic voyage, is the prime object of the Great Northern Steamship Company. Organized by progressive business men who realize the exceptional opportunity offered now for inexpensive travel in Europe, the Company will cater to the thousands of in-

telligent persons who wish to visit the battlefields of France, the Shakespeare country, Scandinavia, the Land of the Midnight Sun, etc. A chance of a lifetime! So it would seem; but it is more than that. The company is building for a permanent business, setting a new standard of high-class ocean travel on a one-class basis. That this can be done at a fair margin of profit has already been proved and is further outlined in our prospectus. You'll find it extremely interesting.

**WE WILL ALSO SHOW YOU HOW YOU MAY  
BECOME A PART-OWNER IN THE MOST TALKED  
OF ENTERPRISE IN YEARS.**

Cut out and mail us with your name and address.

**Hotel** (Coquina), Ormond, Fla. Architects, Magaziner, Eberhard & Harris, 603 Chestnut street, Philadelphia. Owner, James T. Vining, Ormond, Fla. Hollow tile and plaster, 3 stories. Contract awarded to O. P. Woodcock, Jacksonville, Fla. JE-P:ECf1b)) Pa.)fi

### SAFE CONSTRUCTION OF BUILT-IN GARAGES\*

"If a built-in garage is not properly constructed, it is a menace to life and property. Investigations showed that if a fire does start in a single or two-car garage, it is not likely to be more severe than would be withstood by the construction classed as affording one hour fire resistance by the Bureau of Standards of the Commerce Department, the Fire Underwriters' Laboratories, and other authorities. It follows that with an incombustible floor, and the garage separated from the rest of the building by unpierced partitions and ceiling that will meet the one hour fire test, there is no unreasonable fire hazard. Of course, the outside walls must be fire resistant, too, and so must outside windows and the garage doors, in order to prevent flames from breaking out and spreading fire through windows, or to exterior woodwork above. The code does permit, under stringent safeguards, a single swinging, self-closing fire door leading from the garage directly into the house, but we strongly advise that there shall be no opening whatever between the two. It is much safer to enter the garage from the outside."

Six rules from the code for motorists and builders who desire complete directions, are here arranged, starting with floor construction, walls and partitions, then outside doors and windows, and dealing finally with the permissible case

\*From an interview with Mr. Ira H. Woolson, chairman of the Building Code Committee of the Department of Commerce, and consulting engineer of the National Board of Fire Underwriters, drawn from the building code in the Recommended Minimum Requirements for Small Dwelling Construction, published by the Department of Commerce.

of a door directly between the garage and the dwelling.

Rule 1. Garage floors shall be of concrete or equally fire resistive and impervious material.

For convenience in cleaning and to prevent dangerous accumulations of water, oil or grease, all parts of the floor should drain naturally.

Rule 2. Walls and partitions shall be built to meet the requirements of the standard one hour fire test.

Many materials are acceptable under this rule, such as brick, hollow tile, concrete block, or gypsum block four inches thick, or reinforced concrete three inches thick. As a minimum requirement, walls may also be constructed of wooden studs placed 16 inches center to center, with metal lath attached outside and inside. The outer lath is to be plastered and back-plastered with Portland cement stucco, and the inner lath plastered with  $\frac{3}{4}$ -inch Portland cement or gypsum plaster. For interior partitions separating the garage from the rest of the dwelling,  $\frac{3}{4}$ -inch Portland cement or gypsum plaster on metal lath, on both sides of studs spaced 16 inches apart, is satisfactory. The specifications for metal lath and plaster to be used are given fully in the Code Committee's Report.

Rule 3. The combined floor and ceiling construction directly above the garage shall be unpierced, and shall have a fire resistance of one hour. The same rule applies to the roof when the garage is attached to the side of the dwelling.

Ceilings or roofs of reinforced concrete, or some other type of incombustible construction that meets the fire test, are best and most reliable. In the case of true built-in garages, a good, inexpensive overhead construction is as follows:

Ordinary 2-inch or thicker floor joists may be used, spaced not more than 16 inches center to center, and properly bridged. The ceiling should be of heavy metal lath weighing not less than 3 pounds per square yard, and Portland cement or gypsum plaster not less than  $\frac{3}{4}$ -inch thick. The metal lath is to be attached to the joists by sixpenny nails driven nearly home and the heads turned over against the lath, and is to be bent down 6 inches along the walls on all sides and securely attached to them. The flooring above the ceiling is to be double, of  $\frac{7}{8}$ -inch rough and finished floor boards, with a layer of asbestos or other high-grade floor felt between.

Where the garage is attached to the side of a dwelling, an equivalent construction for the roof can easily be devised.

Rule 4. When a garage is located beneath a dwelling, all outside doors and windows with their frames and sash shall

be of standard fireproof construction, and glazed with wire glass.

Only products approved by competent authorities should be used. A large variety of fire doors and windows have been tested and approved by the Underwriters' Laboratories, and are a standard commodity in the building material market. It is important that such devices should be installed in metal frames, and that the same hardware be used as that with which they were equipped when tested. If not, they may fail during a fire. Fire doors are made in both swinging and sliding types, and many of the former are as artistic as wooden doors. Wired glass glazing is required in all outside windows and doors to prevent flames from a fire in the garage from breaking through and endangering the structure or windows above.

Rule 5. Openings from a dwelling into a garage shall be restricted to a single doorway. This opening shall be protected by a standard, swinging, self-closing fire door, with approved fire resistive frame and hardware. No glass shall be permitted in such a door.

A self-closing fire door is one that normally swings shut by a mechanical device. A swinging door is required because it fits closely into its frame, and thereby prevents passage of heat and smoke when attached by fire. Wired glass is not allowed in this door because it is liable to soften and sag from its fastenings at a temperature of about 1,600 degree Fahrenheit, which is a heat easily produced by burning gasoline or oil. But, as stated above, it is better to have no opening in any of the partitions.

Rule 6. When a doorway connects directly with a cellar or basement on the same or lower level in which there is any heating device or gas fixture, the door sill shall be raised at least one foot above the garage floor level, or the doorway shall lead into a vestibule which connects with the cellar or basement by a second door.

This is to prevent fumes from gasoline which may leak or be spilled upon the floor from reaching a furnace fire or gas light that might be located in any lower portion of the building. It is well known that gasoline vapors are heavier than air, and will accumulate on a floor like water, and flow to any lower level, and if they come in contact with fire of any kind—even a spark—will ignite and flash back to the starting point, and cause an explosion. Hence the high door sill.

Business is founded on reciprocity and co-operation. Any other plan than this spells bankruptcy. The successful business nowadays has a heart and a soul.

## As The Editor Sees It

### PROSPERITY AND THE BUILDING TRADES

BY GEORGE WOODRUFF, *Vice President The  
National Bank of the Republic,  
Chicago*

**A**FTER carefully studying the important factors entering into our business activity we are forced to conclude that our building boom has been supporting our recent prosperity, and this is well illustrated by the building permits issued in the principal cities of the United States. Never in history have we had such a great amount of building, and the stimulating effect of this construction activity has been felt in practically all manufacturing lines.

In view of existing conditions it is of great importance for us to note that at the present time there are indications that increasing costs will slow up building activities and that there are many current reports of a buyers' strike. Of course, if such a "strike" should come about there may develop a belief that it will be well to wait for a very considerable fall in building costs before going ahead with building contracts and this would be a very unfortunate development, because if our building activities are now interrupted the chief support of prosperity will be withdrawn and some degree of business recession will follow. It would therefore seem as if those who are engaged in the building industry could

render a great service to themselves and to the country if they were now promptly to adopt the slogan, "Build in 1924," for such a slogan would tend to hold costs down during 1923, prevent any undue spread of the talked of buyers' strike, and at the same time keep the people of our country in a mood to build. Prospective building activity in 1924 would tend to convince the people that it would be unprofitable to cancel building plans with the idea of waiting for prices to go to the "bottom," as an active year in 1924 would mean that there would be no "bottom" for some time to come.

#### *Possible Prolonged Prosperity*

While all well informed business men admit the possibility of a moderate business recession before the end of the year, nevertheless it would seem that those engaged in the building industry are the "pinch hitters" who may be able largely to prevent this threatened slump. If our present building activity proceeds to fall down, the ensuing business recession will considerably decrease our prosperity until we can gather ourselves together for a fresh start, but if the building industry is able to tide us over into 1924 we may then find that a settlement of European social and political questions will make possible the sale of large amounts of foreign securities to American investors, and the proceeds of the sale of these securities would be used

by Europe for the purchase of American goods. Such a development would prolong our prosperity for some time to come, because of the manufactured goods that would be shipped to foreign shores and because of the increased purchasing power of the grain growing sections of our country that would follow the increased demand for agricultural products on the part of the people across the sea.

Upon the intelligence, team work, and vision of American builders now depends the immediate continued prosperity of the nation.

### CONTRACTORS' OVERHEAD

Its Disregard Leads to Bankruptcy

BY GERHARDT F. MEYNE

*Vice Pres., Assoc. Bldg. Contractors of  
Illinois*

**A**SIDE from the actual construction of the building, the preparation of estimates is, of course, one of the most important functions in the contractors' business, although sometimes it is merely looked upon as a necessary evil. Builders who make the mistake in considering that estimating is a necessary evil overlook the fact that it is a most important factor toward making the business a success or a failure.

#### *Listing Materials*

It is needless to say that proper listing

**DRAWING  
MATERIALS**

**CHARLES H. ROBBINS, JR.**

1209 Arch Street,  
BELL PHONE, SPRUCE 1256

Philadelphia  
KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

of materials is essential. The methods used by so many builders in lump estimates is a very serious mistake, and usually ends up with a contractor going to the "great beyond" without leaving any visible means of support for his family, after a life of slavery.

#### *Surety Bonds*

Managers of bonding companies are very careful to scrutinize business methods of a contractor or building corporation before they are willing to furnish a surety bond. It is not often that the very responsible builder with a good reputation and long record of fair dealings is requested to furnish a bond. Architects, engineers, material dealers and owners usually know something about the business methods of a contractor, and, therefore, the bonding companies are usually only asked to bond the low or irresponsible bidder.

The first question the companies must have answered is something about the builder requesting the bond; whether or not he understands his business thoroughly—whether or not he is capable of preparing a correct estimate himself. They also ask about the figures of his estimator or other help, and if the builder is competent to check them and has good judgment.

In the second place, the bonding company is most anxious to know about the general reputation of the builder, his honesty in meeting his financial obligations and his reputation among those with whom he does business, such as sub-contractors and material men, and how he stands with his colleagues in the business.

Thirdly, one of the prime requisites of a builder when he requires a bond is, of course, his financial ability. Not only is his capital scrutinized, but his business efficiency and general executive ability. Needless to say, it creates a bad impression when builders appear in the office of the bonding company with their figures on the back of an envelope. Probably they have cubed a job, or worse yet, have taken some figures that some architect or owner has told them they could get the job done for. Needless to say, the man with a good appearing sheet, his items all properly itemized, showing that the plans and specifications have been carefully surveyed, will have considerably less trouble to be bonded than the sloth.

#### *Complete Cost*

The item of overhead expense is one that has long been neglected by the smaller builders, but it is an item of such considerable importance that it should have the most careful consideration of every builder, little or big. I caution and admonish, as well as counsel, advise and command, that out of every building operation undertaken you get back in

money at least the actual cost of its complete production plus the overhead.

#### *Profit*

The item of profit is one which your own avariciousness demands, or the competition of colleagues permits, or your conscience will allow you to take, but you are at least entitled to all the money you put into an operation. This money, as previously stated, is the cost of labor and materials, permits, liability insurance, bonds, owners' contingency insurance, fire insurance, miscellaneous contingency, such as cutting for other trades, removing of debris, field overhead and general overhead.

#### *Explanation of Overhead*

I will come directly to the explanation of what I mean by field overhead and general or administrative overhead. When the estimate has been made and after the cost of the building has been totaled, a certain percentage for overhead should be allowed. This is sometimes called the cost of doing business. This percentage is calculated in various ways, but it is usually determined by each contractor according to the size of his operations and personal efforts.

#### *Administrative Overhead*

Administrative overhead or expense is that charge which cannot be directly charged to a project or job, and should be again divided into two classes; fixed office expense and miscellaneous expense. Fixed office expense consists of salaries to executives (meaning that the builder should put himself on the payroll), estimators and clerks, rents, plant depreciation, furniture and fixture depreciation, interest on equipment, cost keeping and the helpers involved therein, bookkeeping and its involved cost, yard men and tool men. Miscellaneous expense is, of course, invisible, and is usually composed of stationery, billheads, advertising, interest on borrowed money, office supplies, telephone, telegraph, postage, business travel, automobile upkeep, taxi fares, charity, business insurance, legal expense, tool and equipment maintenance, team account, etc.

#### *Field Overhead*

Field overhead, as I regard it, should also be divided into two classes—non-productive labor and its kindred expense and such invisible overhead as accrues on the job whether or not. Sometimes it cannot be avoided, no matter how much endeavor or effort the builder may put forth to stop it.

#### *First Class of Field Overhead*

Coming back to field overhead of the first class, which we shall call the non-productive field labor overhead, this is

## ANNOUNCEMENT

# The Great Northern Steamship Co.

(Incorporated)  
BOSTON. MASS.

Announces that Arrangements are Now  
Being Made for Monthly

**\$110 Round Trips to Europe**

**Boston—Southampton**

**Boston—Gothenburg**

**\$110**

**\$138**

**ONE WAY \$65**

**ONE WAY \$75**

Connecting for  
London, Liverpool, LeHavre

Connecting for  
Christiania, Stockholm, Helsingfors,  
Danzig, Riga, Copenhagen

**THE ABOVE PRICES INCLUDE RAILROAD FARES TO POINTS AS FAR  
NORTH AS STOCKHOLM**

The Company plans to carry approximately two thousand passengers monthly.  
Make your plans now for a trip during the coming season.

**Lives of passengers will be protected by  
EVER-WARM SAFETY-SUITS**

**which prevent drowning and protect from exposure**

A round trip, with all expenses on ship-board included, at no more expense than a vacation right here at home! To meet the ever increasing demand in this country for an inexpensive and at the same time thoroughly comfortable and enjoyable trans-Atlantic voyage, is the prime object of the Great Northern Steamship Company. Organized by progressive business men who realize the exceptional opportunity offered now for inexpensive travel in Europe, the Company will cater to the thousands of in-

telligent persons who wish to visit the battlefields of France, the Shakespeare country, Scandinavia, the Land of the Midnight Sun, etc. A chance of a lifetime! So it would seem; but it is more than that. The company is building for a permanent business, setting a new standard of high-class ocean travel on a one-class basis. That this can be done at a fair margin of profit has already been proved and is further outlined in our prospectus. You'll find it extremely interesting.

**WE WILL ALSO SHOW YOU HOW YOU MAY  
BECOME A PART-OWNER IN THE MOST TALKED  
OF ENTERPRISE IN YEARS.**

Cut out and mail us with your name and address.

Thos. H. Livezey & Co., have removed their offices to their shop at 2319 Sedgley Ave., Philadelphia.

(Continued from page 356)

made up of superintendents' salaries or wages for the time of timekeepers and material clerk, also the expense of equipment, rentals, setting up equipment, removing and putting equipment in good order and hauling it back to the yards, temporary offices, tool shed, cement shed, temporary power and light, temporary enclosures and fences, sidewalk protection, water connection, tarpaulins, machinery protection equipment, hauling, etc. (Offices, sheds, etc., should be considered cost.)

#### *Invisible Overhead and Lost Time*

Invisible overhead arises on a job or project, and is very often incurred by negligence, sometimes sabotage. More often the best efforts cannot prevent it and should be taken into consideration when making up an estimate.

Lost time is the bottomless pit into which more money than can be estimated has been dumped by contractors. A day free from delays will produce twice as much as an average day. To attain the ideal production means cost keeping and system—hence overhead. Invisible overhead is usually composed of more or less

the following items: Interference of inclement weather, time lost by breakdowns, time lost by shifting plants, time lost waiting for other parts of the project to be made ready, time lost waiting for material, time lost by shifting men to other jobs, efficiency lost by putting on new men, crews too small to be effective in relation to superintendents, foremen, etc. This last item was the case with a certain bricklaying and plastering situation last summer. The builder often had his foremen working with two or three bricklayers and as many laborers. Could he have obtained 20 bricklayers, his overhead would have been the same per diem. The importance of including this invisible expense in the estimate as a contingency or overhead is readily apparent.

#### *Making Up of Overhead*

The making up of overhead is, of course, not alike in every office, but if the gross expense for the year, including the contractor's own salary, is \$15,000 and the business amounts to \$300,000 per year, evidently the overhead is 5 per cent. There are a number of books of more or less value written on the subject of "Cost Keeping Systems" on construction work. Nevertheless, the builder neglects the opportunity of familiarizing himself with and studying the systems offered, and will continue his lamentations over unfair competition and his complaints about the contracting business being the worst business on the earth to use up men and money. In going through the State of Illinois last year, I had many talks with former contractors and realized that they were very quick to criticize and damn their colleagues in the same town and nearby towns, but that they had little understandings of the real system of the business. They, as a rule, had been excellent mechanics and sometimes foremen, and had been content to let their laurels rest on these achievements. I also found contractors unwilling to sit down and talk over operations and costs with their competitors, and to generally organize for their own good.

#### *System*

Taking the first step in system is to map out the object desired and also to map out the results to be obtained and preferably always on paper. It is astonishing what cold figures, on paper, will analyze after a job has been completed. System includes the keeping of records and costs, such as bookkeeping, filing system and estimating. The contractor sometimes objects to a system and calls it red tape, but, somehow or other, the operators who have surrounded themselves with some red tape do not seem to make assignments in bankruptcy as often as the man who will have none of it. The small contractor objects to system because it takes up so much of his time. If the

small contractor's business has grown to such an extent that he must work more than ten hours to keep abreast with his work, then it is absolutely necessary for him to acquire some help, so that he may keep his business records correct as to the income and the outgo of money, the records of his banking accounts, the condition of his equipment and tools, etc. He then at once acquires overhead in addition to his own salary. As to what a builder's salary should be, his competitor, his conscience and his avariciousness will have to be his guide.

#### *Sub-Contractors' Overhead*

We have been discussing the overhead of the general contractor, usually known as the carpenter or mason contractor. His overhead is, of course, considerably less than the overhead of, for example, the plumbing contractor or the painting contractor. The average overhead of the painting contractor is approximately 20 per cent., consisting of the usual fixed expenses and miscellaneous expenses, use and depreciation of brushes, paint pots, step ladders, drop cloths, jack ladders, small cloths, auto trucks, etc. It has been found that 22½ per cent. is an average overhead for the plumber and it ranges from 18 to 20 per cent. in small establishments where the proprietor puts in his time in the evening, making out calculations, bills, rent, use of tools, etc.

#### *Cost Keeping*

Just one word about cost keeping and bookkeeping. The psychology of having a cost keeping system tends to bring out efficiency in one's crews, and, if employed for no other reason, would pay for itself on each job, whether cost-plus or straight contract. An owner who objects to paying for a costkeeping system, having a cost-plus job, is cheating himself, and is very apt to have surprises before the job is done, and, quite often, an existing friendship is broken up by ugly charges.

Uncle Sam in his desire for money, has foisted upon us the income tax, and has taught us all how to keep books or go to jail. But I would like to caution contractors to constantly urge their bookkeepers to have their bills ready and get their accounts rendered, and insist upon payments. The man who has his accounts up to the minute and is up on his collections seldom has to go to court or employ the mechanics' lien law. Red tape has saved him a loss on cost-plus work. Where it is known that the contractor has a real system or an overhead which shows up every item of cost on the project, he will have no trouble with his statements, and 90 per cent. of the time Mr. Owner will never send in an auditor. Again I caution you that the cost of the building is made up of its labor, material, its various contingencies, and OVERHEAD.

*The Constructor.*

## As The Editor Sees It

### A NEW HOTEL IN YOUR TOWN

*The first of a series of articles that will trace, step by step, the phases through which the medium size town hotel project should pass before it becomes a successful reality.*

By W. L. STODDART, Architect.

Reprinted Through Courtesy of "Hotel Management"

ONE fine morning Mr. Jones, a progressive young manufacturer of Blankville (30,000 inhabitants) awoke with a wholly new idea. Where it came from he did not know, but as he kept turning it over in his mind, he became more and more impressed with it—and with himself for having giving birth to it. Yes, it was a wonderful idea—probably the most remarkable of the many he had conceived and carried through to the benefit of himself, his factory and Blankville.

Blankville needed a new hotel! That was the idea. A modern, well-appointed hotel that would not only do credit to the community, and serve its local institutions more effectively than they had ever been served before, but one that would also attract buyers and visitors from the outside world who would patronize the local stores and stimulate Blankville's commercial life all the way up and down the line.

With the right kind of a hotel it might

even be possible to take conventions and political rallies away from Bigtown (60,000 inhabitants) twenty miles up the line. Blankville had many attractive physical advantages to offer convention delegates—why shouldn't such an up-and-coming young city cash in on its beautiful surroundings?

Jones was convinced that what the town undeniably needed was a new modern hotel.

How, then, was he to "put the idea across?" Should he tackle the Chamber of Commerce and local Rotary and Kiwanis Clubs? Their answer would probably be: "Would the people support it?" That was a logical question, too—*would* the people support it? Jones was too astute a business man not to realize that unless he could get the community behind him the proposition would never be successful.

The first step, then, was to stir up public interest in the proposed hotel—and the obvious way to do that was to "talk it up" both to his business men friends and through the medium of the local press. Jones was what is known as a "live wire." He took the editor of the daily paper out to lunch that day and the result of their conference appeared in tangible form two days later in an editorial in the "Blankville Review," advocating the erection of a new hotel. All Jones' arguments in favor of such an institution were well presented, and citi-

zens were invited to comment on the project.

In the meantime Jones had not been cooling his heels. When he and his wife went to the movies with the Browns he broached the subject to them—Brown was vice-president of the Blankville Savings & Trust Company. Jones himself wrote a letter to the "Review" editor enthusiastically endorsing the plan, and this was published in due course. He also persuaded his friend, Smith, who handled his insurance matters for him, to come out in favor of the idea in the public print. Through such schemes as this the project gradually gathered momentum and when the Chamber of Commerce held its monthly meeting two weeks later, Jones felt that the time was ripe to "spring" it.

He was pleasurably surprised when several prominent citizens whom, because of their conservatism, he had not felt it advisable to approach, seemed to take to the idea favorably. Brown, Smith and several of his more intimate cronies, of course came out strongly in its favor. On the other hand, there were a number of older men—men who had made their pile and were about ready to retire—who took the attitude that Blankville had always managed well enough with its present rooming facilities, and saw no reason for courting trouble by trying to raise subscriptions for a new-fangled notion such as this.

PRINTS**

### *Sounding Out Public Sentiment*

The up-shot of the discussion was the appointment of a committee, consisting of a group of Blankville's representative bankers and business men, with instructions to sound out public sentiment more definitely and report to the Chamber at its next meeting. Jones was made a member of this committee and it must be admitted that his business suffered through neglect that month. His work, and that of the other committee members was well rewarded, however, for at the next meeting of the Chamber every committee member reported that public sentiment was very definitely in favor of the new hotel.

With this information as a starting point, the Chamber of Commerce recommended that a tentative board of directors be formed and the project organized on a business basis. The Chamber, furthermore, went on record as endorsing the plan and offered its moral support to the new enterprise.

Jones was elected chairman of the board. As associates he had Brown of the Savings and Trust Company, Green, the "Review" editor, Williams, a local attorney, and Harvev, owner of a wholesale dry goods store. It was up to these men to proceed with the undertaking. Where should they start and what should they do? Good, sound, practical business men all of them; yet they had never had experience promoting a hotel project. They knew, of course, that it would be necessary to raise funds by local stock subscription, engage an architect and builder, determine the size and kind of hotel that would be best adapted to the town's requirements, select its site and do all in their power to keep it filled, but when it came to applying tried and proven methods for the accomplishment of these purposes, they were totally at sea. They had reached the point where it was necessary for them to call in outside, expert advice if they were to proceed intelligently.

\* \* \* \* \*

The above is a typical description of the way in which a great many hotels—particularly hotels in towns of from 20,000 to 50,000 population—are started. It is given in some detail because it seems advisable to trace the various steps that business men in such a community usually go through before actually deciding to inaugurate such a project. These steps form a background that the reader should keep in mind if he is interested in tracing the concrete developments of the project step by step, as they will be described in this series of articles.

Starting with *Hotel Management* for July, these steps will be taken up in detail, one article being devoted to each, in the following order:

1. Determining the Size Hotel the City Requires
2. Selecting the Site
3. Adapting the Hotel to the City's Needs.
4. Cost and Financing Considerations
5. The Architect's relation to the Enterprise.
6. The Working Arrangement with the Lessee.

### COLOR EFFECTS IN SLATE

Slates differ in color, and some colors are much more in demand than others, the preference being based more on tradition than on artistic taste or actual qualities of the slates, states Oliver Bowles, mineral technologist of the Bureau of Mines, who has completed a study of the technology of slate for the Department of the Interior. A wider market for colors not now in demand depends, therefore, on the cultivation of public taste, states Dr. Bowles. Architects and builders can widen the field of utilization of roofing slate by judicious efforts to popularize new colors or combinations of colors.

Slates are classed as fading or unfading according to their color stability. The fading of green slates is probably due to the presence of iron carbonate which seems to be present not as pure siderite, but as an isomorphous mixture of the carbonates of iron, lime, magnesium, and possibly manganese. The hydrous iron oxide formed by decomposition of the carbonate through action of certain solvents carried in rain water destroys the green color and causes fading. The black and gray slates usually contain small amounts of such constituents and are therefore nearly permanent in color. Bluish slates commonly turn grayish, and red slates may turn brown. The green slates are the most uncertain, some are practically permanent in color, but others fade and discolor badly.

A moderate and uniform fading may not be detrimental, but may produce a more pleasing effect, though in replacing broken slates it may be difficult or impossible to match the colors. Nonuniform fading results in spots or streaks and is undesirable. The formation of some spots is due to the weathering of grains of the iron sulphides, pyrite, or marcasite.

Spots and blotches are very objectionable in slates. Many of the red and purple slates contain pale green spots, some bordered with purple. The spots range in size from minute specks to spots 2 inches or more across, some are circular or oval and others are irregular. In places the spots form bands or ribbons.

Beaver County, R-204, A-1942, Chippewa and Patterson Townships, 7,979 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Harry V. Kirker Co., Beaver Falls, Pa., \$75,947.50.

Beaver County, R-1950, Hopewell Township, 5,147 feet. One course reinforced concrete. Harry V. Kirker Co., Beaver Falls, Pa., \$50,101.50.

Clarion County, R-214 and 311, A-1940, Sligo Borough, 5,187 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Thomas W. Munro & Co., Dubois, Pa., \$55,397.20.

Crawford County, R-83, A-2325 and 2326, Pine and Conneaut Townships, 20,145 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. H. E. Bunce, Cambridge Springs, Pa., \$155,501.10.

Dauphin County, A-2025, Derry and Londonderry Townships, 22,890 feet. Either one course reinforced concrete or one course reinforced concrete and bituminous macadam penetration method on broken stone base. Stucker Brothers Const. Co., Harrisburg, Pa., \$158,872.30.

Erie County, R-304, A-2329, Amity Township, 1,508 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. J. C. Devine Co., Alliance, Ohio, \$102,717.40.

Northampton County, A-2309, A-2310, East Allen and Hanover Townships, 15,537 feet. One course reinforced concrete. W. A. Palmer, Bethlehem, Pa., \$116,989.65.

Northampton County, R-165, 155, A-2005, 13,627 feet, Wind Gap Borough. Either bituminous surface course on concrete foundation and hillside vitrified brick or one course reinforced concrete and hillside vitrified brick. McInerney & McNeal, Inc., Easton, Pa., \$134,917.60.

Somerset County, R-50, A-2268, 2269, Confluence Borough, 2,875 feet. One course re-

inforced concrete. M. F. McCabe Co., Fairmount, W. Va., \$42,834.

Resurfacing:

Blair County, R-53, Juniata, Blair and Allegheny Townships, 26,018 feet. Bituminous macadam penetration method on reconstructed base course. Paul Const. Co., Inc., Philadelphia, Pa., \$100,870.20.

Bucks County, R-281, Spur, Middletown Township, 21,878 feet. Bituminous macadam penetration method on reconstructed base course. James J. Barrett, Olden avenue, Trenton, N. J., \$77,223.05.

Bucks County, R-152, Doylestown and Bucknigham Townships, 16,803 feet. Bituminous macadam penetration method on reconstructed base course. W. C. Guncheon & Co., Smethport, Pa., \$78,426.10.

Butler County, R-73, Mercer Township, 10,548 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Charles Winters Const. Co., Renfrew, Pa., \$88,264.45.

Fayette County, R-247, Perry and Dunbar Townships, 83,8492 feet. Either bituminous macadam penetration method or bituminous surface course on reconstructed base course. Jones Const. Co., Salem, Ohio, \$133,019.35.

Greene County, R-111, Franklin Township, 12,017 feet. Either bituminous macadam penetration method or bituminous surface course on reconstructed base course. Reed & Moore, Waynesburg, Pa., \$82,588.72.

Lehigh County, R-163, South Whitehall Township, 19,500 feet. Either bituminous macadam penetration method or bituminous surface course on reconstructed base course. Weaver Contg. Co., Allentown, Pa., \$97,338.10.

Northumberland County, R-161, Coal Township, 17,858 feet. Bituminous macadam penetration method on reconstructed base course. Highway Const. Co., Philadelphia, Pa., \$70,605.20.

Tioga County, R-196, Richmond and Covington Townships, 13,977 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. R. J. DeLong, Williamsport, Pa., \$150,647.60.

Westmoreland County, R-118, Hempfield Township, 23,917 feet. Either bituminous macadam penetration method or bituminous surface course on reconstructed base course. Smith Const. Co., Youngstown, Ohio, \$123,312.01.

**Warehouse**, Lancaster, Pa. Architect, C. E. Urban, Woolworth Building, Lancaster, Pa. Owners, Block Brothers, rear of 419 North Prince street, Lancaster, Pa. Fireproof mill construction, 4 stories, 36x90 feet, 36x36 feet, slag roof, maple floors, electric light, rolled steel sash, fire doors. Architect taking bids due June 15th.

**Allentown Central Office Building (int. alts.)**, Loudon and Hale streets, Allentown, Pa. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Bell Telephone Co., Seventeenth and Parkway, Philadelphia. Steam heat, electric light, metal lath, tile, marble and terrazzo work, hollow metal sash, hollow metal and kalamine doors, bond, iron work and stairs, carpentry and mill work, plumbing, hardware, hollow tile, cork and tile floors, kitchen equipment. Architect taking bids June 18th.

**Bank House (alts. and add.)**, Kittanning, Pa. Architects, Dennison & Hiron, 288 Lexington avenue, New York City. Owners, Safe Deposit & Title Guaranty Co., Kittanning, Pa. Changing, remodeling and enlarging. Certified check, \$1,000. Owner taking bids due June 26th at 1 P. M.

**Stores and Apartments (8)**, West Chester Pike and Golf Road, Upper Darby, Delaware County, Pa. Architect, M. M. Boonin, 1506 North Alden street, Philadelphia. Owners, Kolker & Lapidus, 150 South Sixtieth street,

Philadelphia. Brick, stone and steel, 2 stories, (7) 16x68 feet, (1) 18x70 feet, hot water heat, electric light, metal lath, tile work, flush bulks, iron stairs, metal ceilings, yellow pine, hardwood and tile floors, slag roof. Owners taking sub-bids.

**Residence**, Lot 11, Wynnewood, Pa. Architect, Richard A. Kerns, Jr., 10 South Eighteenth street, Philadelphia. Owners, Dr. and Mrs. Arthur Clark, Otis Building, Philadelphia. Stone, brick, hollow tile and stucco, shingle roof, oak and pine floors, electric light, tile work, rolled steel sash, incinerator. Architect will take revised bids.

## Pennsylvania

### Contracts Awarded

**Residence (alts. and add.)**, Overbrook, Pa. Architect, W. Woodburn Potter, Real Estate Trust Building, Philadelphia. Owner, J. J. Caskie, Bulletin Building, Philadelphia. Brick, concrete, stone and steel, slate roof, composition, oak and pine floors, electric lighting, metal lath, plastering, tile work, rolled steel sash, iron work, plumbing. Contract awarded Le Roy K. Smith, Forty-first and Chester, Philadelphia.

**High School**, Green Tree, Pa. Architect, H. L. Reinhold, Jr., 1513 Walnut street. Owners, School District of Willistown Township, Chester, Pa.; secretary, Stanley L. Roberts, Malvern, Pa. Brick and stone, 2 stories and basement, 35x80 feet. Contract awarded to W. R. Beard, Coatesville, Pa., \$35,476. Plumbing, R. H. Phelps, Montgomery avenue, Malvern, Pa., \$1,662.50. Heating, American Heating & Ventilating Co., 200 North Fifteenth street, Philadelphia, \$3,810. Water supply system, R. H. Phelps, Malvern, Pa., \$453. Electric, Christman & Quillman, Norristown, Pa., \$430.

**Residence**, Cynwyd, Pa. Architect, Charles M. Wells, Rutledge, Pa. Owner, H. N. Booth, Cynwyd, Pa. Hollow tile and frame, stucco, 2½ stories, 22x32 feet, pine floors, hot air heat, electric lighting, shingle roof. Contract awarded to G. W. Gregory, Swarthmore, Pa.

**Residence**, Cedar Lane, Swarthmore, Pa. Architect, C. M. Wells, Rutledge, Pa. Owner, H. H. Hulegg, Riverside, N. J. Frame and stucco, 2½ stories, 20x32 feet, shingle roof, pine floors, hot water heat, electric light, tile work. Contract awarded G. W. Gregory, Swarthmore, Pa.

**Grand Stand**, Bloomsburg, Pa. Architect, W. A. Lang, Norristown, Pa. Owners, Columbia County Fair Commission, Columbia County, Pa. Concrete and steel. Contract awarded to Anthracite Bridge Co., Scranton, Pa.

**School (alts.)**, Manoa Road, between Eagle Road and West Chester Pike. Architects, Boyd, Abel & Gugert, Estey Building, Philadelphia. Owners, School District of Haverford Township, Joseph N. Huff, secretary, School Building, Oakmont, Pa. Hollow tile and slate work, carpentry and mill work, hot water heating, metal lath, plastering, painting, glazing, bond, iron work. Contract awarded to W. Harry Roberts, Oakmont, Pa.

**Club (alts. and add.)**, Reading, Pa. Architect, H. R. Heckman, Mineral Spring Road, Reading, Pa. Owners, Reading Veteran Volunteer Association, Reading, Pa. Indiana limestone, brick, 2 stories, 21x21 feet, Barrett roof, hardwood floors, electric light, marble work, iron work. Contract awarded to Fink Const. Co., 658 Penn street, Reading.

**Garage**, Lancaster, Pa. Architect, C. E. Urban, Woolworth Building, Lancaster, Pa. Owners, Watt & Shand, 2 East King street, Lancaster, Pa. Steel, cinder block, 2 stories, 62x86 feet, slag roof, concrete floors, steam heat, electric light, rolled steel sash. Con-

tracts awarded to Herman Wöhlson, Woolworth Building, Lancaster, Pa.

**Residence and Garage**, Overbrook, Pa. Architect, William Woodburn Potter, Real Estate Trust Building, Philadelphia. Owner, William Woodburn Potter, Real Estate Trust Building, Philadelphia. Stone, half timber, 2½ stories, 80x25 feet, 1 story, 20x25 feet, hot water heat, electric light, tile and marble work, slate roof, hardwood and cement floors, grading, macadam road. Contract awarded to Le Roy K. Smith, Forty-first and Chester avenue, Philadelphia.

## New Jersey Construction News

**Bank Building**, Eighth and Asbury avenue, Ocean City, N. J. Architects, P. A. Davis, 3rd, & Dunlay, 1713 Sansom street, Philadelphia. Owners, Ocean City Title & Trust Co., Ocean City, N. J. Stone and brick, steel and concrete. Plans completed. Architects taking bids in 6 weeks.

**Cottage and Garage**, Cape May, N. J. Architect, H. L. Duhring, 1309 Locust street, Philadelphia. Owner, Mrs. Elizabeth Richardson, Cape May, N. J. Frame, 2½ and 1 stories. Plans in progress.

**Residence**, Trenton, N. J. Architects, P. L. Fowler & Co., Fitzcharles Building, Trenton. Owner, M. Crosby, care of architects. Brick and shingle, 2½ stories, 20x35 feet, slate roof, hardwood floors, electric light, tile work. Plans in progress.

**Factory (alts. and add.)**, Trenton, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owners, Freeman Electric Co., 803 East State street, Trenton. Brick, 3 stories, 100x190 feet, slag roof, concrete and wood floors, electric light, hollow metal sash, fire doors. Plans in progress. Architect will be ready for bids in one week.

**Sanitary Sewage System and Sewage Pumping Station**, Borough of Westville, Gloucester County, N. J. Architects, Remington & Vosbury, 601 Market street, Camden, N. J. Owners, Borough of Westville, W. P. Atkins, Borough Clerk, Borough Hall, Westville, N. J. 8-inch cast iron force main, 5-inch, 8-inch, 10-inch, 12-inch terra cotta pipes, 6-inch, 8-inch terra cotta house under drains, manholes, flush tanks, electrically operated sewage pumping station, bond. Owners taking bids due June 20th, 8 P. M. (daylight saving). Deposit, \$15; refund, \$10.

**Public School**, Broad and Delaware streets, Woodbury, N. J. Architects, The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, Board of Education of Woodbury, N. J., High School Bldg., S. Broad St., Woodbury, N. J. Brick, east stone, cut stone, reinforced concrete and steel, 3 stories and basement, 191x64 feet, wing 174x74 feet (heating, plumbing, electric and ventilators separate), cement and maple floors, hollow tile, safety treads, roof ventilators, ornamental iron work and stairs, floor hardener, bond, hollow metal and kalamein doors, hollow metal skylights, metal lath. Owners taking bids due June 21st at 7 P. M. (daylight).

**Electro Pneumatic Signal Tower**, Camden Terminal, Camden, N. J. Architect, S. T. Wagner, Reading, Terminal, Philadelphia. Owners, Atlantic City R. R., care of Reading R. R. Co., Twelfth and Market streets, Philadelphia. Brick, cut stone, steel, 2 stories, 17x34 feet, 1 story boiler room, 16x18 feet, hot water heat, electric light, slate roof, cement floors, hollow metal doors, bond, iron stairs and iron work. Architect taking bids due June 18th.

## ANNOUNCEMENT

# The Great Northern Steamship Co.

(Incorporated)  
BOSTON. MASS.

Announces that Arrangements are Now  
Being Made for Monthly

**\$110 Round Trips to Europe**  
Boston—Southampton      Boston—Gothenburg

**\$110**

ONE WAY \$65

Connecting for  
London, Liverpool, LeHavre

**\$138**

ONE WAY \$75

Connecting for  
Christiania, Stockholm, Helsingfors,  
Danzig, Riga, Copenhagen

THE ABOVE PRICES INCLUDE RAILROAD FARES TO POINTS AS FAR  
NORTH AS STOCKHOLM

The Company plans to carry approximately two thousand passengers monthly.  
Make your plans now for a trip during the coming season.

Lives of passengers will be protected by  
**EVER-WARM SAFETY-SUITS**

which prevent drowning and protect from exposure

A round trip, with all expenses on ship-board included, at no more expense than a vacation right here at home! To meet the ever increasing demand in this country for an inexpensive and at the same time thoroughly comfortable and enjoyable trans-Atlantic voyage, is the prime object of the Great Northern Steamship Company. Organized by progressive business men who realize the exceptional opportunity offered now for inexpensive travel in Europe, the Company will cater to the thousands of in-

telligent persons who wish to visit the battlefields of France, the Shakespeare country, Scandinavia, the Land of the Midnight Sun, etc. A chance of a lifetime! So it would seem; but it is more than that. The company is building for a permanent business, setting a new standard of high-class ocean travel on a one-class basis. That this can be done at a fair margin of profit has already been proved and is further outlined in our prospectus. You'll find it extremely interesting.

**WE WILL ALSO SHOW YOU HOW YOU MAY  
BECOME A PART-OWNER IN THE MOST TALKED  
OF ENTERPRISE IN YEARS.**

✂ Cut out and mail us with your name and address. ✂

## New Jersey Contracts Awarded

**Shop Building (add.),** School of Industrial Arts, Trenton. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owners, City of Trenton, care of Mr. Fell, City Hall, Trenton, N. J. Brick, reinforced concrete, 2 stories, 60x125 feet, slag roof, concrete and wood block floors (heating, electric work and plumbing reserved). Contract awarded to J. H. Morris & Co., 211 North Montgomery street, Trenton, N. J.

**Rectory,** Trenton, N. J. Architects, P. L. Fowler & Co., Fitzcharles Building, Trenton, N. J. Owners, St. Andrew's Protestant Episcopal Church, Mr. W. Brown, Trenton, N. J. Frame, 2 stories and basement, 35x70 feet, slate roof, pine floors, hot water heat, electric light. Contract awarded to I. H. Clayton, 282 Bellevue avenue, Trenton.

## Miscellaneous Construction News

**Hotel,** Keystone Heights, Florida. Architects, Lawrie & Green, Commonwealth Building, Harrisburg, Pa. Owners, Senator Miller Hotel, Keystone Heights, Florida. Architects selected. Too early for details.

**Extension to Plant and Motor Truck Plant,** Fort Wayne, Ind. Architects, Day & Zimmerman, 611 Chestnut street, Philadelphia. Owners, International Harvester Co., care of architect. Foundations and concrete work. Architects taking bids due June 16th.

**Hall of Chemistry,** Morgantown, W. Va. Architects, Paul A. Davis & Dunlap, 1713 Sansom street, Philadelphia. Owners, West Virginia University, care of State Board of Control, James S. Lakin, secretary, Charleston, W. Va. All bids rejected. Revised plans in progress. Owners will take new bids.

**Office (alts. and add.),** 837 King street, Wilmington, \$6,500. Architect, private plans. Owners, Wilmington & Philadelphia Traction Co., 834 Market street, Wilmington, Del. Brick, 1 story, 60x20 feet, slag roof, pine floors, electric lighting. Contract awarded to Hendle & Samworth, 1600 West Fourteenth street, Wilmington, Del.

## Proposals

**TREASURY DEPARTMENT,** Supervising Architect's Office, Washington, D. C., June 9, 1923. Sealed proposals will be received at this office until 2 P. M., June 25, 1923, and then opened, for concrete sidewalks at the Public Health Service Hospital, Numbered 42, Perryville, Md., in accordance with drawings and specifications, copies of which may be obtained from the Superintendent of Construction, U. S. P. H. S. Hospital, Perryville, Md., or from this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

America stands supreme in the development and use of advertising, and advertising is the seed which by implanting desire produces the fruit of social advancement. Education promotes efficiency and efficiency in turn makes possible higher earning power, higher purchasing power and improved living conditions.

## PAINTING STRUCTURAL STEEL WORK

BY A. ASHMUN KELLY

**S**TRUCTURAL steel may come to the job with or without the priming coat of paint. The practice at one time was uniformly to coat it, but this was found in most cases to be wrong, as the scale would loosen and remove the paint, besides which the paint was usually applied by careless, unskilled workmen, and had to be removed.

By allowing the unpainted metal to remain uncoated for some time before erection the weather caused much of the scale and dirt to fall off, and when it was time to coat it the metal was cleaned with steel brushes and then it received the paint properly.

This priming coat is usually applied just before assembling the parts. The best coating is red lead thinned out with linseed oil, the paint to be mixed fresh each day, as it will stiffen or harden if left too long after mixing, say over night. It is possible to mix as much as 33 lbs. of dry red lead with a gallon of oil, this making a good workable paint, for the coating should not be a mere film. A proper mix of red lead gives a hard and yet elastic coating, one that is thick, and yet will not crack. It fills the pores of the metal and adheres well to it.

Red lead prevents rusting, and water cannot penetrate it. This is why marine underwriters favor it, and why the hulls of vessels are primed with it, as also the locks on the Panama Canal. In short, practically all structural work is protected with red lead paint.

Steel structural work should have at least two coats of red lead paint, and each coat, no matter how many, should be slightly colored, in varying degrees, so that the inspector may readily detect faulty work. A little lampblack with the red lead will do for the purpose, and this black is itself a useful addition in securing a uniformity of the thickness of the film.

To secure the best results the structural steel should be made perfectly clean of all matter that can be removed, such as moisture, grease, scale, etc. The time given to this work is time profitably spent. Then, all small pinholes, cracks, fissures between plates, poles, etc., should be filled before applying the paint. In no case should two parts of bare metal meet, as that sets up local galvanic action, which leads to corrosion. Paint therefore every part of the whole surface. White lead, a carbonate of the metal lead, and at one stage of its manufacture an oxide, should not be used for priming iron or steel, nor should oxide of zinc paint, as it also is capable of eat-

ing into the metal. All the iron ore paints contain phosphorous and sulphur, and these substances are injurious to iron or steel. Burning, however, removes these inimical properties of the ore.

Asphaltum does not make a good coating, though it is sometimes employed on bridge steel construction. It is usually thinned out with benzine, which evaporates and leaves the painted surface rough and in a condition to catch the soot and dirt, which rain and other forms of moisture act upon to form acid that acts upon the metal and brings rusting.

Old painted iron work should be cleaned by scraping and burning off, and then be given a coat of turpentine or benzine, after which it may be painted.

The usual formula for making a red lead paint for iron or steel work is as follows: Take 25 lbs. of dry red lead and stir it gradually into one gallon of boiled linseed oil, or raw linseed oil. Then strain the paint. If extra quick drying is desired, then add about a gill of drying japan. But red lead is itself a strong drier, hence it is unusual to add any drying help to assist it. The above formula will give something over a gallon of paint, and it should cover about 1,000 square feet of average surface.

Graphite and lamp black are sometimes added to red lead paint, the purpose being to cause the red lead paint to work easier under the brush than the red lead paint alone will do, for it is a very stubborn liquid to spread out. Red lead paint should be frequently stirred, for it settles badly in the pot, though there are substances, such as pulverized abseptos, that will keep the heavy pigment in suspension, without injuring its wearing qualities.

—Building Age.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

"Camouflage" doesn't pay in advertising. Don't call your cannon a bit of landscape. Be honest and gain the confidence of the public.

## As The Editor Sees It

### GENERAL MARSHALL THINKS MORE GOOD THAN HARM MUST COME FROM CURTAILING CONSTRUCTION

**R**ESTRICTION of new building operations in accordance with the stabilization program of the American Construction Council is beginning to bring inquiries from building material producers, contractors, and labor organizations. Lumber manufacturers, for example, are pointing out that prices of lumber at the sawmills are 35 per cent. less than in 1920; and the lumber retailers have put out a statement showing that lumber retail prices are about 34 per cent. less than in 1920. Similar statements have been made in regard to other building materials, and it is maintained that building trade wages have not yet generally attained to the levels of the latter part of 1920. In view of these facts the National Lumber Manufacturers' Association invited General R. C. Marshall, Jr., general manager of the Associated General Contractors of America, to explain the reasons and the objects of the restrictive program, which he does in the following statement:

"Considering the purchasing power of the dollar today, as compared with 1913, building costs are not now prohibitive

but we are menaced by dangerous inflation. According to our index figures the cost of building in the Spring of 1920 was about 55 points higher than it is now, (1913 taken as 100, 1920 was 255 and 1923 is 200) and building material prices were about 90 points higher—index figures on a 1913 base of 100 being 300 for 1920 and 210 for 1923.

"While building trade wages are at the moment about 75 points higher than in 1913, they are not quite so high as they were in the latter part of 1920 and first part of 1921, but as labor efficiency falls off with increasing wage rates, labor production costs are rapidly mounting. The trend is unmistakably toward heavy increase in the total of building costs. The building permits issued in 200 cities in March amounted to \$397,000,000, an increase of about 50 per cent. over March 1922, and the volume of building now in progress dwarfs any previous records in the history of the country, being almost 75 per cent. greater than at any other time.

"We are undertaking this enormous expansion of building with a stationary if not shrinking labor supply, on account of the immigration restriction law, and with the material industries of the country practically at the limit of their productive capacity. There can be only one outcome of such a situation if it is allowed to persist. The cost of mater-

ials and labor will presently rise to prohibitive levels, and our enormous constructive program will collapse with a crash. If history is a good guide, it will take two or three years to recover, in spite of the fact that we are still at least a year's normal building behind the housing requirements of the country.

"It is commonplace to say that all industry is vitally related to construction. If this industry tumbles from an extraordinary peak of activity to a depth of extraordinary depression, the general results will be reflected in all the country's industry and commerce.

### Stabilizing Building Costs

"To us who are so situated as to see the hand-writing on the wall, there was no other choice than to attempt consciously to check the rise in building costs before they become prohibitive and destructive. We calculate that if all building projects for speculative selling can be deferred for a few months, and also all other large construction projects that are not of an emergency nature, we shall effect something of an equilibrium between supply and demand in the construction industry, and will be able to stabilize costs at present or, possibly, slightly lower levels.

"If we do this we think that about eighteen months of exceptional prosperity can be counted on in the construc-

Philadelphia  
KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

tion trades, and that from then on the building industry will be able gradually and comfortably to meet the new construction needs of the country. As we see it, the question simply is, will the country "go easy" on new building for two or three months and thereby insure itself a year and a half or more of exceptionally good business, without a terminal explosion resulting in widespread ruin and distress; or will it insist on plunging into mad carnival of rising costs and supernormal building volume which is sure to blow up in a few months and to be followed by two or three years of ruinous prostration?

"This attempt to prevent a giddy cost peak from which there will be no way down but by a suicidal leap, is something new in what you might call applied economics. It may not succeed and there may be untoward developments, but we are convinced that nothing that may come from this conscious effort to prevent disaster will be as bad as the disaster itself. Doubtless the restrictive policy may work hardship on many industrial plants and some workers, but of course in a general program of this kind it is impossible to do individual justice to thousands and tens of thousands of cases involved.

We can only hope to attain the general good, and that present individual sacrifices will be more than offset in the compensating benefits that will ensue. So far the appeal for the deferment of construction, wherever possible, has been generally responded to. Hundreds of millions of dollars of projects have been held up and the present prospect is bright that we shall be able to flatten out the ominous impending peak."

#### *Not Injurious to Lumber*

Wilson Compton, secretary and manager of the National Lumber Manufacturers' Association, commenting on General Marshall's statement, brings out the point that most of the building projects within the scope of the restrictive program are large city apartments, office buildings, hotels, and factory buildings, which do not require relatively much lumber. The restrictions will have but little effect on the various classes of construction into which lumber largely enters. Indeed, one effect may be to promote that sort of buildings, because during the curtailment period more labor and material may be made available for them at reasonable prices.

—*American Contractor.*

"Camouflage" doesn't pay in advertising. Don't call your cannon a bit of landscape. Be honest and gain the confidence of the public.

A most important conference met in Cleveland, June 5, and the action taken should be watched in its development by every man interested in construction. A permanent national plan was evolved to provide the construction industry with sufficient bricklayers. Providing this plan works out, and there is no doubt that such a plan can be worked out, this meeting called by the Common Brick Manufacturers' Association and attended by such interests as masonry construction contractors' associations, building employers' associations, National Association of Builders' Exchanges, members of international bricklayers' union, the federal director of vocational education under the Smith-Hughes act, public and trade school representatives, representatives of the American Institute of Architects, is a mighty important event, the most important one recorded this week.

The basic consideration is the supply of building trades mechanics. The common brick manufacturers as an association are not only looking in a far sighted way to their own interests in seeing to it that men are trained to lay the product of their kilns, but they are looking in an unselfish manner to the practical benefit of the whole industry. At this conference, they called in representatives from all branches of construction. We assert this plan of training men will work out to the practical good of the entire industry. We can back our statements by the good which is actually being produced here and there now by the training schools for apprentices which have sprung up almost over night as it were. These are producing good results, though it must not be supposed that their hasty organization has in all cases resulted in 100 per cent. efficiency. Their great merit lies now in the fact that they were started to meet a crisis and that with such a sudden start they have functioned in the excellent manner they have.

A text-book, presumably for the educative guidance of bricklayers, will be prepared by Howard Briggs, who is vocational director of the Cleveland public schools, and will be published by the Common Brick Manufacturers' Association. The work done by the Cleveland bricklayers' school will doubtless serve as a guide in the actual laying out of the plan.

There are certain conditions which, through experience, have been proved essential to proper working out of apprentice system. One is that employer and employe be agreed on the justification and the necessity for the school and that they work in harmony with it. Another is that a man give full time to this work and see to it that boys and employers alike keep their contracts religiously.

HOUSE, STATE NORMAL SCHOOL,  
TRENTON, N. J.

Public notice is hereby given that sealed proposals for furnishing labor and materials

ANNOUNCEMENT

The Great Northern Steamship Co.  
(Incorporated)  
BOSTON, MASS.

Announces that Arrangements are Now  
Being Made for Monthly  
**\$110 Round Trips to Europe**  
Boston—Southampton      Boston—Gothenburg  
**\$110**      **\$138**  
**ONE WAY \$65**      **ONE WAY \$75**

Connecting for  
London, Liverpool, LeHavre      Christiania, Stockholm, Helsingfors,  
Danzig, Riga, Copenhagen

THE ABOVE PRICES INCLUDE RAILROAD FARES TO POINTS AS FAR  
NORTH AS STOCKHOLM

The Company plans to carry approximately two thousand passengers monthly.  
Make your plans now for a trip during the coming season.

Lives of passengers will be protected by  
**EVER-WARM SAFETY-SUITS**  
which prevent drowning and protect from exposure

A round trip, with all expenses on ship-board included, at no more expense than a vacation right here at home! To meet the ever increasing demand in this country for an inexpensive and at the same time thoroughly comfortable and enjoyable trans-Atlantic voyage, is the prime object of the Great Northern Steamship Company. Organized by progressive business men who realize the exceptional opportunity offered now for inexpensive travel in Europe, the Company will cater to the thousands of in-

telligent persons who wish to visit the battlefields of France, the Shakespeare country, Scandinavia, the Land of the Midnight Sun, etc. A chance of a lifetime! So it would seem; but it is more than that. The company is building for a permanent business, setting a new standard of high-class ocean travel on a one-class basis. That this can be done at a fair margin of profit has already been proved and is further outlined in our prospectus. You'll find it extremely interesting.

WE WILL ALSO SHOW YOU HOW YOU MAY  
BECOME A PART-OWNER IN THE MOST TALKED  
OF ENTERPRISE IN YEARS.

Cut out and mail us with your name and address.

to install certain Mechanical Equipment for the New Power House, State Normal School, Trenton, N. J., will be received by the Architects at the office of the Commissioner of Education, State House, Trenton, N. J., on July 2, 1923, at 3 P. M., Daylight Saving Time.

Contracts will be let in two or three contracts, as follows: (a) Engines and Generators, (b) Electrical Equipment and Wiring, (c) Refrigerating Plant.

Proposals shall be made in form required by the Architects, enclosed in sealed envelopes with bidder's name, addressed to Commissioner of Education, State House, Trenton, N. J., and endorsed, "Proposals for Mechanical Equipment, State Normal School, Trenton, N. J.," and stating the branch or branches of work covered.

No bid will be considered unless accompanied by a certified check to the order of the State of New Jersey, in the amount of 10% of the gross bid, binding the bidder to execute a contract or contracts if awarded to him. The terms of proposal with Surety required are fixed by the specifications.

The right is reserved to accept or reject any or all proposals and to waive informalities.

Copies of drawings and specifications will be on file at the office of the Architects for the purpose of estimating. A limited number of such copies will be loaned to the prospective bidders on deposit of a certified check to the order of the State of New Jersey in the sum of \$10. These drawings and specifications may be obtained by application to Guilbert & Betelle, Architects, Chamber of Commerce Building, Newark, N. J. If the drawings and specifications are returned on or before the date of submission of proposals the check will be returned, but should same not be returned, the deposit may become forfeited.

**GUILBERT & BETELLE,  
ARNOLD H. MOSES,  
Associated Architects.**

## WOLF! WOLF!

All over the nation the apparent scarcity of labor and the real lack of mechanics is causing competitive bidding that is sadly reminiscent of the vivid days of 1920. The enormous building program, and the inadequacy of railroad facilities have tended to hoist the prices of material to the accompaniment of tremendous howling by the public—but who cares or who dares to lay any blame on labor for getting all the traffic will bear?

The ruinous conditions of '20 being deeply impressed upon the memory of our solid citizenry who were swept into the maelstrom by the exigencies of the moment, only shortly later to find themselves holding the well-known bag, while the chaps who had everything to gain and nothing to lose, proceeded to gain everything by speculation—it is only reasonable to expect that same solid citizenry to be coy and extremely conservative—yes, even apprehensive of a boom that would lead to another charnel-house condition like 1920.

So this once-burnt citizenry are now advising against building. They can claim no originality in this, as the Honor-

able Herbert Hoover conceived the thought long before they did, when he advised that the government building program be held up and kept out of competition with private enterprise. These folk who are attempting to thwart the avalanche, however praiseworthy and high motivated they may be, must remember this one thing—that in times of stress, the building industry is the first industry hit; it is the last and hardest to recover, and is not on the preferred list of activities during slack periods. So it would be well to proceed with caution with a slowing up of the building program so as to avoid a complete stop. Brakes are all right but they mustn't be jammed down hard when the machine is travelling at a high rate, for like grandfather's clock it might "stop, never to go again."

The thought back of a deferred building program is that the public, if lured into a condition of stomach which ordinarily requires soda mint tablets to cure, will quit building and buying as they did in 1921. But the dear public, as the late P. T. Barnum remarked, "wants to be fooled," or bunked, as witness their mad stampede to get into line to buy when prices are high. Eventually, when the effervescence has gone, and the cold gray light of reason filters into the public head, they realize that they have been "gypped"—but instead of blaming themselves and swallowing the bitter pill with a grin, they howl loudly and with vigorous abandon.

As a matter of fact, practically no one is forced to build. They may be led into building, but no one can be driven into erecting a building, so in the final analysis, the dear public has only itself to blame for building or buying at the peak. But the long heads of the building industry know the sting of public opinion, and wish to avoid a duplication of the venomous thrusts so lately aimed at them by the short memoried and unthinking public.

There are five classes of individuals who like to see a wild cat market. The fly-by-night real estate operator likes to see it, for the higher the price, the larger his commission. He gets his, while the getting is good, risking nothing but his time, which is valueless anyway. The reputable real estate man deplores such a market, and would cheerfully murder the shyster operator, for he knows the balloon must come to earth some day, and when it does, public confidence in real estate has been spoiled, and he either has to mark down his own legitimate properties or carry them till times are better.

The loan shark welcomes a fly-away period, for he knows that the reputable loaning organizations tighten their purse

strings at such a time, and he makes loans at fancy discounts. Even when the bubble is pricked, he can't lose much, for his bonuses have been so outrageous that he can afford to take the slump markdown and still have a gilt edged investment.

The roll-top desk material man loves a period such as 1920. His manufacturers co-operate with him to unload a lot of junk at fancy prices, and the profits suffer from fatty degeneration. The dealer with an investment in yards, equipment, and material, dealing only with reputable manufacturers, hates a sky-scraping market, for when the flood subsides the roll top man retires—but the dealer with the investment stays and takes the cussing.

The soldering mechanic licks his lips at the thought of '20 conditions. He knows that he can't hold a job when things are normal, and he knows that what little he does looks better than nothing to the fatuous builder who has bid in his services, and so he putters along, killing time, and leaving a bad taste with everybody. When the rocket comes to earth, he picks up his tools and hikes—and the honest mechanic who really is trying to earn his pay, stays and takes the cut in wages and bears the opprobrium.

Labor has always claimed lilv white hands for itself. Now Labor has a chance to show that it really is clean. By digging in and doing a day's work and earning a day's pay, by honest men refusing to work on the same job with loafers, by cleaning house of the parasites who drone along and garner profitable wages demanded by regular mechanics, Labor can redeem itself and win approbation. But will Labor do it? Judging from past performances—it is to laugh!

The highly speculative builder likes a wild cat market. He operates on a shoe string of his own money, co-operates with the roguish real estate man, borrows money from the avaricious loan shark, connives with the unstable material man, pays Labor unheard of prices, sticks up buildings, unloads them at fancy prices, and fades from the picture. He should worry about the man who finds mortgages coming due with alarming and persistent regularity! He should sweat blood paying fancy bonuses renewing mortgages. He should face the prospect of losing his all by foreclosure. But he got his—and got out! Flim flam—gold brick—watch the pea, gentlemen, and tell me which shell it is under—green goods—if this speculative madness is not stopped, the building industry will soon be classed with such "con" games.

—Building Industry.

## As The Editor Sees It

### APPRENTICES AND CRAFTSMANSHIP

BY D. KNICKERBACKER BOYD\*

At the many meetings which we have had of the Philadelphia Building Congress, we have almost always come down to the one subject, that of lack of apprentices, and the need of apprenticeship training in the building crafts. These conditions seem more accentuated today than ever before, because of the recent great increase in the amount of building construction. Notwithstanding this, the facts are that during the last ten years the number of workers in the building trades has constantly decreased while, with the exception of the period following the war building itself has greatly increased, so that you see the situation we are confronted with today is quite a natural one. But it should have been recognized long ago.

Now, when we consider the problem of the apprentice in the building trades or crafts, as I prefer to call them, and debate whether the fault lies with those who, it is often claimed, are endeavoring to restrict the number of apprentices or with the employers who it is also claimed are not willing to assume the responsibility of training young men, we have before us quite a large subject. And what

\*Remarks made at the Fifty-sixth annual convention of the American Institute of Architects in Washington, D. C.

we need, as architects, I firmly believe, is to devote more attention to craftsmen and not give all our thoughts to draftsmen, although we do need still to do much for the latter.

The difficulty seems to be, notwithstanding the two claims made, that the boys do not exist in sufficient numbers who want to learn the crafts and trades. The young men of today do not seem to want to enter what they consider the "laboring" field. So why go into protracted academic discussions as to who is responsible for the lack of numbers? We need to discover the cause of the lack of interest on the parts of the boys.

We must inculcate the idea in the young men of America that the crafts do offer a future for them, and we must stimulate in their minds a desire to achieve something dignified and definite with their hands. The craving of every human being to create and accomplish can be satisfied through craftsmanship properly appreciated.

The present difficulty does not rest so much with the boys, it seems to me, as it does with many of their parents, and with most of the educational systems of the country. Traced back into the homes of the children, I really believe that the fault lies more with the mothers, sisters and sweethearts of the young men and boys, than it does with almost anyone else. These dear ladies, most of them, do not want to see their boys, brothers

or "boy friends" dressed in overalls or the clothes of workmen, and littered with mortar, plaster, sawdust, metal filings or paint. They do not seem to like that and they therefore use their persuasion on their relatives and friends to keep them from training for or engaging in this sort of work.

We, therefore, feel as we see it in Philadelphia, and as I have observed it throughout our movement elsewhere, that we can, as a group accomplish definite results, and as individual architects, achieve something by directing our energies with equal force to the present journeymen problem, as well as to the apprentice.

After all, the greatest discourager of the boy who might want to become an apprentice in the building trade can be, and most frequently has been in recent years, the father who is now working in the trades. Fathers, uncles or relatives who are employed in the so-called building trades at this time will generally not urge or encourage their sons, nephews or other young men to enter the same calling.

The journeyman of the present generation now working on the buildings we design realizes that he has lost much time in the Eastern and other sections of the country subject to cold climates, through seasonal losses of occupation, as Mr. Parker said. He has, in normal times, been subject to intermittency of employ-

**BLUE  
PRINTS**

ment, and he has been working at what is almost always rated a hazardous occupation. He is frequently working out doors, subject to attendant disadvantages as well as advantages. His task is often a very heavy one and involves a difficult piece of work, and in spite of the skill required and art he many times displays, he tells his boy not to learn that trade. These men can be the greatest enemies of the building crafts today. I think the fault lies partly with the construction groups, the public and with us as individual architects.

Locally and nationally, studies of all the difficulties involved can be made and conditions alleviated through co-operation of all, including the public by a sensible distribution of its new construction and maintenance requirements.

As for our part as individuals, if we architects recognize the fact that we are, as our very name implies, master craftsmen, it seems to me that we ought to be able each to accomplish our part in improving the status of other craftsmen by encouraging and giving recognition to the "workers on the job." It is these men who, as a matter of actual fact, assume their part with us in securing the results which we are striving for when we design our buildings and write our sometimes hazy specifications.

Many of us, if we look back through the years of our superintending, will perhaps realize all too suddenly that we have usually passed the worker by,—that he has not been given sufficient recognition for services well performed. We all have to condemn work sometimes,—but how much oftener, when it should be commended do we do so? That, it seems to me, is one of the faults to which we can address ourselves, and we can very readily correct it if we will give heed to the human side of our own industrial relations. If our contact with the workers on our buildings is such that they know that real interest and good work will cause favorable comment, we will encourage them and help them to believe that which they may often be justified in doubting,—namely, that what each is doing is, if well done, an accomplishment worthy, often to be called an art.

The consciousness on the part of each that what he does is something vitally important to the success of the whole design and fabrication will cause each to feel that he must qualify as a craftsman, and not be content to consider himself merely one of a "gang" working on a "job."

I would like to give you one typical illustration of an actual experience in this direction.

Just before I left Philadelphia I attended the opening of an exposition there called the Palace of Progress. For this exposition there has been built under my

direction one of the numerous buildings called the "model home." The management consented to use a book descriptive of the materials used, with which we should all be more familiar than we are. It was also decided to list the names of every man who worked efficiently night or day to make that building a success.

In keeping the records to give this recognition to the craftsmen and workers, I asked some of the bricklayers what the names of the men who worked with them in their particular craft. I said to them, "How about the mortar mixers and the hod carriers?" One of the bricklayers said, "My God! you don't want *their* names, do you?" (Laughter.) I said, "Why, Certainly! You men must admit that you can't successfully perform your work, nor can the architect get the best results for the owner if you don't get good mortar and if you haven't got good, strong shoulders to carry the mortar and bricks to you and place them efficiently for you. I consider those men very important to the rest of us."

The bricklayer said, "We only know them by their numbers, as 1, 2 and 3. That man over there is No. 2," (indicating). I had to go to the man and get his name personally, which I was glad to do, though it caused much astonishment on his part as to my purpose.

As a result of that talk and others, and of the fact that these men were going to be given recognition in the book, many of them who had been working day and night during two weeks said, "We will not accept any excess pay for the overtime or the night work, because our efforts to please the public are being recognized."

I have often talked to workers collectively and individually and asked them if, they should be requested to express one wish that they would like to have gratified more than any other, what that wish would be. They have all said strange as that may sound to some, that what they wanted most was some fair recognition for their work,—or as they have put it—a few words of appreciation for work well done when they try to do their best.

In that direction we, as architects, can take advantage of many of the opportunities that our calling presents. We can surely appreciate the human factor and stop and talk with the men. They can work with us and not for us, and we can both learn and teach if we say, "Well done, old man," or Tom or Dick or Harry, or whoever he may be,—if his methods and results appeal to us.

We may not always be in a position to say that they are doing their job well, for they may know it a great deal better than we do, but we certainly let them know at least that they are giving us the

(Continued from page 404)

results that we have tried to provide for in our designs and that they are correctly interpreting what are sometimes, perhaps, vague specifications which could be much improved as Mr. Jones so well told us yesterday.

It seems to me, therefore, that the problem can be rightly solved and in part almost immediately solved if we can begin at once to improve our specifications, our methods and ourselves, and by real human contact restore interest and pride of craft.

If we make the workers feel that we recognize their part as real factors in the success of any enterprise that their efforts and the results of their work form a large part of the success of our work, and the satisfaction of our client,—if we do that, the apprenticeship problem will largely solve itself.

I would like to suggest, however, in view of the points raised during this convention on the apparent lack of apprentices, that some step might be agreed upon whereby the Industrial Relationship Committee could appoint a sub-committee on Apprenticeship. In its title I would, however, include Vocational Guidance, because the fault it seems to me lies largely with the lack of guidance toward manual labor in the schools.

I believe that the Institute could do nothing of much greater value than to create such a Committee if through it a new Document might be prepared which could well be entitled "The Romance of Building," and be made available to the schools everywhere. In this booklet could be portrayed intelligently and enthusiastically, the advantages of being

a worker on a building and of having an opportunity to co-operate with architects and all other craftsmen in being of ever increasing service to the people of this country.

## REPORT OF CONFERENCE ON SIMPLIFICATION OF HOLLOW BUILDING TILE

### *Elimination of 23 of the 36 Prevailing Sizes Recommended*

At a meeting held June 19, 1923, at the Department of Commerce, the Standards Committee of the Hollow Building Tile Association reported to the Department's Division of Simplified Practice, the results of a survey which the Association had made of existing varieties in types, sizes, and weights of hollow building tile.

The survey showed 36 different sizes—each made in a wide variety of weights. The Committee recommended the elimination of 23 of the 36 sizes, and the retention of 13 as "standards" for the industry. A standard weight, with a permissible variation of 5 per cent. over or under the standard weight, was also recommended for each of the 13 sizes retained.

The Committee requested the Department of Commerce, through its Division of Simplified Practice, to call a general conference next October of manufacturers, architects, engineers, contractors, and builders to discuss the general adoption and use of the recommended standard sizes and weights.

Those present at today's meeting were: Mr. E. R. Sturtevant, Fraser Brick Co., Dallas, Tex.

Mr. H. R. Straight, Adel Clay Products Co., Adel, Iowa.

Mr. H. C. Downer, Malvern Fire Clay Co., Malvern, Ohio.

Mr. H. P. Bevier, National Fire Proofing Co., New York.

Mr. C. W. Dixon, Columbus Brick & Tile Co., Columbus, Ga.

Mr. F. J. Huse, Research Engineer for the Association, Chicago, Ill.

Mr. E. W. McCullough, Mgr., Fabricated Production Department, Chamber of Commerce of United States, Washington, D. C.

Ray M. Hudson, Division of Simplified Practice, Department of Commerce.

"This is another decided step forward in the Hoover plan to reduce the cost of building construction through the elimination of waste in industry," Ray M. Hudson, the Commerce Department's representative, declared as the session closed.

**You can't expect to do your "bit" of this busy world's business unless you enlist in the advertising ranks.**

## FACTS ABOUT MORTGAGES THAT CONTRACTORS SHOULD KNOW

The field of the first mortgage real estate bond as a popular form of investment has developed abreast of the evolution of the sky-scraper and many-roomed apartment house from the modest structures of the '90s. The explanation is two fold. In the first place, as office buildings grew in number and size and apartment houses and hotels were enlarged to meet the demands of growing cities, the amount of capital entailed in individual building operations increased. It was less easy for borrowers to get their loans, as they had before, from institutions and private investors of means. Too much money was involved. It became necessary to draw from many sources. It became essential, also, to give all participants in a mortgage an equal degree of protection, and so the same process was followed as in case of a railroad loan of many millions of dollars. First mortgage loans were split up into pieces, just as a railroad loan was divided, and investors were able to acquire an interest of either large or small amount.

The second factor assisting in the developing of first mortgage real estate bonds was the earning power of buildings constructed to produce a regular income. In the old-fashioned conception of a mortgage the primary consideration behind a mortgage loan was the security afforded by land and building values. That was the chief thing in the lender's mind. The production of revenue from a building was the borrower's affair. If it was sufficient to cover interest and ultimately provide for the principal payment all well and good. If it fell short, the money would have to be raised from some other source or the mortgage was foreclosed. Final appreciation of the fact that the earnings of a well-constructed, well-located apartment house or hotel would not only insure interest payments but also provide for the gradual retirement of the loan, imparted a higher investment quality to real estate mortgages than they had enjoyed before. The element of risk was pretty well reduced to simple calculations in arithmetic plus a conservative valuation of land and building selected as security for a mortgage under which bonds were issued.

A great gap separates the modern way of handling real estate loans from the cumbersome and rather troublesome method which the investor had to follow a half century ago. In theory the mortgage on real estate is the simplest sort of an investment; in practice it is different. Its simplicity is attested to by the fact that mortgages existed in the very dawn of history, shown by the records left on

## ANNOUNCEMENT

# The Great Northern Steamship Co.

(Incorporated)

BOSTON, MASS.

Announces that Arrangements are Now  
Being Made for Monthly

**\$110 Round Trips to Europe**

**Boston—Southampton**

**Boston—Gothenburg**

**\$110**

**\$138**

**ONE WAY \$65**

**ONE WAY \$75**

Connecting for  
London, Liverpool, LeHavre

Connecting for  
Christiania, Stockholm, Helsingfors,  
Danzig, Riga, Copenhagen

**THE ABOVE PRICES INCLUDE RAILROAD FARES TO POINTS AS FAR  
NORTH AS STOCKHOLM**

The Company plans to carry approximately two thousand passengers monthly.  
Make your plans now for a trip during the coming season.

**Lives of passengers will be protected by  
EVER-WARM SAFETY-SUITS**

**which prevent drowning and protect from exposure**

A round trip, with all expenses on ship-board included, at no more expense than a vacation right here at home! To meet the ever increasing demand in this country for an inexpensive and at the same time thoroughly comfortable and enjoyable trans-Atlantic voyage, is the prime object of the Great Northern Steamship Company. Organized by progressive business men who realize the exceptional opportunity offered now for inexpensive travel in Europe, the Company will cater to the thousands of in-

telligent persons who wish to visit the battlefields of France, the Shakespeare country, Scandinavia, the Land of the Midnight Sun, etc. A chance of a lifetime! So it would seem; but it is more than that. The company is building for a permanent business, setting a new standard of high-class ocean travel on a one-class basis. That this can be done at a fair margin of profit has already been proved and is further outlined in our prospectus. You'll find it extremely interesting.

**WE WILL ALSO SHOW YOU HOW YOU MAY  
BECOME A PART-OWNER IN THE MOST TALKED  
OF ENTERPRISE IN YEARS.**

Cut out and mail us with your name and address.

clay tablets by the Babylonians. And while the process of placing and retiring such loans was refined in some particulars as the centuries passed, still the holder of a mortgage had the same tasks and difficulties in 1880 A. D. as in 1880 B. C. He had to collect his interest; he had to allow renewals from time to time if the borrower would not or could not retire the principal; he had to run the risk of depreciating security behind his loan, if buildings ran down or land values declined; he had to check up the payment of taxes and fire insurance premiums; he had to take over a property now and then through foreclosure.

The details of collecting interest and safeguarding equities are looked after by big investors by systems commensurate with the money involved; but for the average investor in real estate mortgages the first mortgage bond, issued by a responsible bond house, removes a great deal of work and worry. He does not have to collect his interest, for that is done for him. He does not have to wonder whether the security behind his bond is depreciating, for under the method now followed by the more conservative underwriting firms, the security is bound to increase from month to month and year to year until the loan matures. And he does not have to fuss with renewals, for the reason that his bond falls due on a definite date and is paid off without delay.

There are several kinds of mortgage bonds, but in general, the same principle is followed by investment brokers to protect the interest of bondholders. The procedure usually followed now is to issue bonds secured by a mortgage on a particular property, such as an office building. Assume that the structure is to cost \$1,000,000 and the land on which it will be situated is appraised at \$400,000. The builder will negotiate with a banker for a first mortgage loan of, say, \$900,000 (about 65 per cent. of the value of the completed property), and will make other arrangements for raising the remaining \$500,000. Instead of seeking a single investor with \$900,000, or two investors with \$450,000 each, the mortgage banker will deposit the original mortgage and its accompany papers with a trustee and issue bonds for an amount equivalent to the size of the mortgage. These bonds may be in denominations of \$1,000 \$500 and \$100, thus providing amounts convenient for almost any investor. Instead of the entire loan maturing at one time, it will be arranged so that certain amounts become due each year, with the result that the investor has a choice of maturities as well as denominations.

The investor has no effort to make except to buy the bond of the size he wants. The collection of interest and principal,

checking payments of taxes and fire insurance premiums, as well as negotiations in making the loan, such as appraising the property, examining the title, etc., is attended to by the banker. A well-established concern has a wider experience than any individual investor can obtain, is able to command the services of experts in each department and is able to supply the investor with a security singularly free from risk or annoying details of management.

A prevailing policy, and one which increases the safety of real estate mortgage bonds, is that of requiring the borrower to make monthly payments in a sinking fund established to meet semi-annual interest and annual retirement of a part of the mortgage. The original mortgage remains as a lien against the property until the last bond has been retired; hence, as bonds are paid off the equity which the remaining bonds have in the property steadily increases. This operation is worthy of illustration.

Suppose that under a certain mortgage \$60,000 in principal and \$60,000 in interest are due in a given year. The total of \$120,000 must be provided in twelve monthly installments of equal size—\$10,000. The aggregate income of the building, of course, is much in excess of \$10,000 a month, as it was on the basis of receipts of considerably more than the bare mortgage requirements that the loan was negotiated. In the first six months as bond coupons mature, \$30,000 is paid out of accumulated payments. At the end of the year \$30,000 more interest and \$60,000 for principal payment are due. There is no such strain as might fall upon the borrower if the full principal payment and a half year's interest had to be provided near the end of the year, and at the same time the lender's position is as strong in any one month as in any other month. Monthly payments make it the first business of the owner of the building to meet the requirements of the bond owners.

First mortgage real estate bonds sell at par. The rate of interest varies from  $5\frac{1}{2}$  to 7 or  $7\frac{1}{2}$  per cent. The same money market influences which shape the amount of interest paid on a railroad, public utility or manufacturing company loan govern the real estate mortgage market to a degree. But, in addition, factors peculiar to communities in which the building securing the mortgage is erected bear upon the rate. Rates in the South are higher than in the North and Middle West, for the reason that Southern borrowers of many classes are active bidders for capital to finance industrial as well as municipal and housing developments.

The principal concern of the buyer of first mortgage real estate bonds is not the rate of interest nor the security behind his investment. It is the reputation

and conservatism of the underwriting bankers. When all is said and done, it is upon the banker that the bond buyers must rely for accurate appraisal of values of property securing a loan, for enforcement of the mortgage provisions and for the proper handling of maturities.—*National Builder*.

#### A FEW DON'T FOR HOME BUILDERS

Don't kick about the cost for "extras" if you order them.

Don't assume that the lowest bidder is always the most satisfactory.

Don't take anyone's words about "lump-sum" prices—investigate before you build.

Don't change your mind after the house is half built. Changes cost money.

Don't expect solid gold door knobs when the allowance for all the hardware is only \$50.00.

Don't think because your neighbor's house was built before the war at a cost of \$5,000 that you can duplicate it today at that price. Labor and materials have gone up since then.

Don't expect your architect to do his work for nothing. He must be paid for the work he does. He probably knows more about building houses than you do. Trust him and don't deceive him as to what you really can afford to spend.

Don't think that the dream house you have in mind, or the plan you have partially decided upon, is the one that will best fit any property. Study your lot, your neighborhood, your street frontage, and the types of homes surrounding.

Don't expect that your house won't settle, the ceilings crack and the doors sag, if your house is not properly braced, framed and nailed.

Don't forget that four nails are more than twice as good as two, and are better insurance against sagging doors, cracked ceilings, warping woodwork.

Don't forget that your local dealers, contractors and supply men are equipped to give you very great help and a lot of valuable information. Their reputations are at stake. Most of these men consider their reputations far more important than the materials they use.

Don't make the mistake of building from sketchy plans, or no plans at all. Nothing is more expensive than rule-of-thumb planning, or hit and miss building. Railroads cannot operate trains without time tables. There is no quicker way to wreck your purse than building without an accurate buying and building schedule. This means carefully prepared plans, that are complete in every respect.

—*The Small House*.

# Sale of Buildings and Improvements

at

CODDINGTON POINT

and

NAVAL TRAINING STATION  
NEWPORT, R. I.

A  
U  
C  
T  
I  
O  
N

At 10 A. M. Standard Time, July 17 and 18, 1923

Approximately 200 buildings and improvements, located at Coddington Point and two buildings at the Naval Training Station, Newport, R. I. will be offered at public auction on July 17 and 18, 1923.

These buildings must be torn down and removed. Excellent facilities for removal are available since Coddington Point is situated on the N. Y., N. H. and H. R. R. on Naragansett Bay with good warfage. Removal by truck is made possible and desirable due to good roads.

Large quantities of piping, wiring, fixtures and other improvements are included in the buildings, but no land is offered.

Sale to be held under the auspices of Gerth's Realty Experts, Inc., 505 Fifth Avenue, New York City. Catalog No. 508-A covers all details of the sale and may be obtained from the Auctioneer or the undersigned.

### MORE HELP FOR HOME BUILDERS

By HAROLD CARY in *Collier's*, The  
National Weekly

Ernest Flagg, who built the great Singer building, is now designing small houses. He has put up more than 500 attractive houses at a saving of one-third their ordinary building cost. He has given the greater part of his life to the working out of ways and means to strip small houses of their sham; to make them cheaper and more substantial, and vastly better looking.

In the face of rising costs of both materials and labor, Ernest Flagg, one of America's two or three greatest architects, is having houses built at a saving of one-third the cost ordinarily required. By the use of his methods of design and construction a builder can save 30 to 40 per cent. of the cost price of a modern house of five to twenty rooms.

The figures are not merely on paper. Buildings are being put up of stone with large fireplaces, with all modern conveniences, for \$10,000 which would cost you under present conditions, with ordinary methods, a full \$15,000.

They are not ready-cut, or sectional, or poured concrete, or done on any large-scale factory-production scheme. They are individual, with walls of masonry a foot and a half thick, or more.

There is no need to cup hand at ear to hear a chorus of disclaimers. That

chorus is always heard because, as human beings, we are so fond of that weak human phrase: "It can't be done." But it is being done and nothing prevents its being done almost everywhere in the United States except ignorance of the means, dogged stubbornness, conservatism, and the old belief that what was a good way for our fathers must be the best way for us.

It is against such prejudices that Ernest Flagg has gone ahead. His was the daring genius that erected the first great tower on Manhattan Island. For years it was the highest commercial structure in the world, rising 612 feet above the street. For years this skyscraper, the Singer Building, was a symbol of American business enterprise, and today it ranks among the most beautiful pieces of architecture in the world. So in a great new development of art, Flagg pointed the way and created one of the wonders of the world, yet the critics of architecture will not admit that the Singer Building, great as it is, is his real monument.

They point to the sheer loveliness of the Corcoran Art Gallery in Washington, D. C., and are willing to stand on the belief that no structure in the world far exceeds it as a work of architecture and design. The Naval Academy at Annapolis is also from his board, as are many other private and public buildings of great worth. Unquestionably most cri-

tics would include Flagg among a choice of the three greatest American architects, probably bracketing this son of a Brooklyn minister with Cass Gilbert and Stanford White.

### "Build 'Er the Old-fashioned Way"

There has been little advance in fundamental building ideas for generations. While design has been improving since the day of Mansard and his amazing roofs, while the telephone, electric lights, modern plumbing, the automobile, and countless other engineering improvements have been winning universal approval, we have stuck like a burr to old-fashioned ideas that are, indeed, completely outworn. You see, building a house is an enormously important undertaking in most family lives. It is the biggest investment of a lifetime. A mistake or a bad idea may be tragic. "Build 'er up in the good old-fashioned way!" you tell your contractor, and he proceeds to build it in the bad old-fashioned way.

To do anything new takes courage. Only a violent upset puts a mind in a receptive mood for something out of the ordinary.

But while Flagg was designing large public buildings he was playing and experimenting with small private houses. It seems probable that his deepest interest really lay in improving the dwellings of American householders. He was working out ways and means to strip them of sham; to make them cheaper,

PRINTS**

more substantial, and vastly better-looking. He was, perhaps, working to overcome the fact that fully 90 per cent. of American houses are built entirely without the aid of an architect: working against the prejudice that to have an architect is to increase greatly your cost of building.

#### *Why Do Houses Have Attics?*

When I visited Flagg in his architectural "laboratory," at Dongan Hills, Staten Island, I found this big, ruddy-faced, white-haired man bang in the middle of a new project. He was building a house for one of his friends and at the moment I hove in sight was chipping rock, trying to uncover a hidden beauty in the stone that was being used. He started right in, hammer and tongs, explaining rapidly and clearly those departures which were being used in this house, and which were already proved in other buildings to be a stunning success.

"The object of this work," he began at once, "is to improve the design and construction of small houses while reducing their cost."

Now I wanted so eagerly to know some figures that I could not wait, so I told him about the foundation wall which was being built for me up in Westchester County at a contract price of 45 cents a cubic foot. Before me was a Flagg foundation wall, a thing of real and permanent beauty. "How much is that costing?" I asked.

He called the foreman in charge of construction. "You figured the cost in that wall yesterday, didn't you?" Mr. Flagg asked.

"Yes, sir," said the foreman. He pulled a sheaf of papers out of his pocket. "Here they are, sir. It's just six cents a cubic foot."

And I think that it was from then on that I belonged to the group of admirers of Ernest Flagg.

Wood has been so cheap in the United States that we have used it almost everywhere. Stone has been little used because of its supposed greater cost. It is cheaper by far in the long run, of course, and now since wood is becoming scarcer and more expensive and since there are the new ways of utilizing it, Mr. Flagg is interested almost exclusively in using stone for walls.

He went on with a magnificent discourse about the need for applying the fundamental principles of art to design.

Why do houses have attics? They are frightfully expensive storage space. Mr. Flagg's houses do not have any. Many of his living rooms run to the peak of the roof. If second floors are to be used, then bedrooms run to the peak—and they are as cool and comfortable as any bedrooms with vacant attics above them. A little "ridge dormer" rides on the roof tree and keeps the

room as cool as an attic air space, or cooler. It is windowed and screened and operated with a cord from within.

#### *Saving One-third of Cost*

It looks well on the outside and adds light within. It is an invention which enables you to see all the space under the roof; which enables one-story houses to be built with walls only five feet above the ground; two story houses with walls only twelve feet above the ground. It makes easy of achievement the low-lying house that every layman and architect dreams of and so rarely achieves. And remember that since the cost of modern frame buildings is nearly 45 cents a cubic foot, a full-sized attic in a medium-sized house of six or seven rooms will cost you somewhere near \$1,800.

The houses built by Mr. Flagg have no cellars!

A cellar usually costs about 20 per cent. of the total cost of a house. It was first used to "keep the house dry," and, scientifically speaking, kept it damp. It was also used as an ice box, and as such is used no more.

Unless thoroughly damp-proofed, all cellars are moist—who likes to live in a cellar?—and this wet air permeates the house, just the way escaped coal gas in the basement does. By having furnace and coal bins above ground a great deal of effort is saved in housework, and the mass of the house is increased to make it more impressive. The space between the floor and the ground, which Flagg covers with waterproofed concrete, is dead air space, and houses so built are as warm and dry as houses with big, damp-proof cellars. The cost of the layer of concrete on the ground is quite insignificant. These are facts, proved in use, scientifically correct. It is the conservatism of all of us, the prejudices, that make them hard to believe. As Mr. Flagg says: "When houses were first built in the Back Bay section of Boston without cellars, people were afraid to live in them, but experience proved them to be most sanitary."

The most spectacular and unbelievable innovation is the Flagg partition, another invention. The ordinary partition is built by putting up two-by-fours along the line. These are covered up with either metal or wood lath. Then three coats of plaster are applied, and on top of the last one is put the finish. The result is a partition which is a series of flues for fires. Once started in a wall, a fire quickly becomes disastrous, and it is in addition a fine nesting and hiding place for vermin. They are not sound-proof—why should they be since they have dead air space just like the sound box of a drum? Moreover, they take a lot of space. They are six inches

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

Plans in progress.

**Store and Residence**, Atlantic City, N. J. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City. Owners, Board of Education, H. H. Young, 25 South Bartram avenue, Atlantic City, N. J. Brick, 2 stories, 45x97 feet, slag roof, concrete floors, rolled steel sash and skylights, fire doors (heating, lighting and plumbing reserved). Plans in progress.

**Atlantic City Vocational School (add.)**, Atlantic City. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City. Owners, Board of Education of Atlantic City, H. H. Young, 25 South Bartram avenue, Atlantic City, N. J. Brick, steel, concrete, 5 stories, 34x114 feet, slag roof, concrete floors, electric light, metal window guards, waterproofing dampproofing, iron stairs and work. Plans in progress.

**Store and Apartment**, Glassboro, N. J. Architect, A. B. Gill, Law Building, Camden, N. J. Owner, Martin Sherwood, care of architect. Brick, 2 stories, 43x43 feet, slag roof, pine floors, steam heat, electric light, store fixtures. Architect ready for bids.

**Apartment**, Dover and Atlantic avenues, Atlantic City, N. J. Architects, Dobbins & Schmidt, Segel Building, Atlantic City, N. J. Owners, Shapiro, Knoll, Gold Co., Atlantic City, N. J. Brick, steel, 3 stories, 45x95 feet, slag roof, hardwood floors, vapor heat, electric light, tile and marble work. Owners taking bids.

**Residence**, Haddonfield, N. J. Architect, C. R. Peddle, 136 South Fourth street, Philadelphia. Owner, Arthur H. Holl, Haddonfield, N. J. Brick, 2½ stories, 30x60 feet, hot water heat, electric light, tile trimmed, slate roof, hardwood floors, tile work. Owner taking sub-bids.

**Glass Houses (5)**, Millville, N. J. Architect, R. W. Pollock, 8 South Hicks street, Philadelphia. Owners, Whitall Tatum Co., 410 Race street, Philadelphia. Concrete and steel, 1 story, electric light, dirt floors, rolled steel sash. Owners building.

**Anchorage Cable Bents**, Philadelphia, Pa., and Camden, N. J. Architect, private plans. Owners, Delaware River Bridge Joint Commission, J. K. Costello, secretary, 806 Wid-

ener Building, Philadelphia. Furnishing, fabricating, painting and erecting of steel, anchorage cable bents, approximately 1,900 tons of steel work, bond. Deposit, \$25. Refund, \$25. Owners taking bids due July 18th, 1.30 P. M. (standard time).

**Store and Apartment (alts. and add.)**, 41 West State street, Trenton, N. J. Architect, Walter Hankin, 39 East State street, Trenton, N. J. Owner, J. S. Vaughn, care of architect. Brick, 3 stories and basement, 20x80 feet, slag roof, pine floors, hollow tile, hot water heat, electric light, tile work. Architect taking bids due July 5th.

**Residences (6)**, Laurel avenue, Trenton, N. J., \$24,000. Architect, private plans. Owner, William H. Hayes, 659 Edgewood avenue, Trenton, N. J. Frame, 2½ stories, 14x42 feet, slate roof, pine floors, electric lighting. Owner will build.

**School**, Pleasantville, N. J. Architect, Bertram Ireland, Guarantee Trust Building, Atlantic City. Owners, Pleasantville School Board, C. Smith, secretary, Pleasantville, N. J. Brick, concrete, 1 story, 56x90 feet, slate roof, hollow tile, metal lath, roof ventilators, waterproofing, dampproofing, iron work. Lowest bidder: J. Green, Pleasantville, N. J.

## New Jersey Contracts Awarded

**Electro Pneumatic Signal Tower**, Camden Terminal, Camden, N. J. Architect, S. T. Wagner, Reading Terminal, Philadelphia. Owners, Atlantic City Railroad, care of Philadelphia & Reading Railroad, Twelfth and Market streets, Philadelphia. Brick, cut stone, steel, 2 stories, 17x34 feet, one story boiler room, 16x18 feet, hot water heat, electric light, slate roof, cement floors, hollow metal doors, bond, iron stairs and work. Contract awarded A. L. Carhart, Penfield Building, Philadelphia.

**Storage House (add.)**, Trenton, N. J. Architect, William Klemann, First National Bank Building, Trenton, N. J. Owners, Trenton Malleable Iron Co., New York avenue, Trenton, N. J. Brick, 2 stories add., 74x30 feet, slate roof, concrete floors, electric light, steel sash, fire doors. Contract awarded to S. W. Mather & Son, Greenwood and Canal, Trenton, N. J.

**Residence**, Park avenue, Trenton, N. J., \$4,900. Architect, private plans. Owner, W. J. Harris, care of builder. Frame, 2½ stories, 20x30 feet, slate roof, pine floors, electric lighting. Contract awarded to Arthur Holford, 50 Bismark avenue, Trenton, N. J.

**Church (alt.)**, Woodbury, N. J. Architect, Emil G. Perrot, 1211 Arch street, Philadelphia. Owners, St. Patrick's Roman Catholic Church, care of Rev. C. G. McCorriston, Woodbury, N. J. Stone, steel, cut stone, cut one story, 72x27 feet, slate roof, electric light, metal lath, pine and cement floors, limestone, ornamental iron work. Contract awarded to Joseph B. Best, Woodbury, N. J.

**Store and Apartment (alts. and add.)**, 423 Broadway, Camden, N. J. Architect, A. B. Gill, Law Building, Camden, N. J. Owner, Bernard Brinn, care of architect. Brick, 2 stories, 22x17 feet, tin roof, hardwood and pine floors, hot water heat, electric light, tile work, general interior alterations, metal ceilings. Contract awarded to Victor Bezahlar, 1027 Atlantic avenue, Camden, N. J.

**Schools (electric work and fixtures)**, Camden, N. J. Architects, Lackey & Hettle, 5 Hudson avenue, Camden, N. J. Owners, School Board of Camden, A. Austermuhl, secretary, Camden, N. J. Electric work and fixtures, contracts awarded: Grant School, Friend and Linden streets, Peterson Electric Co., Camden, N. J.; Garfield School, Twenty-ninth and

Cramer streets, Peterson Electric Co., Camden, N. J.; Erevad School, Seventh and French streets, Peterson Electric Co., Camden, N. J.; McKinley School, Thirty-fifth and Mickle streets, Peterson Electric Co., Camden, N. J.; Bergen School, Fifth and Mt. Vernon streets, West Jersey Elec. Co., 905 Division street, Camden, N. J.; Lincoln School, Twelfth and Kaighn avenue, West Jersey Elec. Co., 905 Division street, Camden, N. J.

## Miscellaneous Construction News

**Bank Building**, Claymont, Del. Architect, W. E. Hance, Hollyoak, Del. Owners, Claymont Trust Co., Claymont, Del. Architect taking bids due July 7th.

**Church and Sunday School**, Fredonia, N. Y., \$125,000. Architects, Charles Bolton & Son, Witherspoon Building, Philadelphia. Owners, First Methodist Episcopal Church, Fredonia, N. Y. Brick, 1 and 3 stories, 125x60 feet, steam heat, electric light, slate roof, hardwood floors. Contract awarded Meister Cons. Co., Dunkirk, N. Y.

**Church**, Buffalo, N. Y., \$200,000. Architects, Charles Bolton & Son, Witherspoon Building, Philadelphia. Owners, Trinity Methodist Episcopal Church, Buffalo, N. Y. Stone, 1 and 3 stories, 175x70 feet, steam heat, electric light, slate roof, hardwood floors. Contract awarded to Robert E. Williams, Buffalo, N. Y.

**Club House**, Elmhurst, Long Island, N. Y. Architects, The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, Queensboro Lodge, No. 878, B. P. O. E., Elmhurst, Long Island, N. Y. General construction, refrigeration, heating, electric work, plumbing, swimming pool. Contract awarded to George McEntee, 103 Park avenue, New York City.

(Continued from page 420)

through, and space in almost any kind of a house costs at least \$6 a square foot. In using up space alone ordinary partitions thus cost \$3 a running foot.

The Flagg partition is all plaster and but an inch and three-quarters thick. It is fire- and vermin-proof, less subject to damage than ordinary ones because the plaster is thicker and quite as sound-proof.

Along a beam where the partition is to go are hung lengths of jute scrim like the material of burlap bags. The edges are basted together by twine with a bagging needle. At door openings and at walls, as well as at top and bottom, the scrim is attached with ordinary staples. Thus a curtain is formed. Now two plasterers, one on each side, go to work, facing each other, and put on the first rough coat, each working against the other. If only one plasterer is available, a laborer can hold a board up for him to work against. The curtain of plaster now must hang plumb, like a pendulum. The bottom hangs in the base-board. When the first coat is dry two more are put on in the regular way. And that is all there is to the Flagg partition, all lath and lumber and a great deal of labor being eliminated.

Partitions like these have been used for several years in New York apartment houses. They have been tested by the New York Fire Department under official test for the Building Department. They were made into the sides of a room eight by twelve feet, and the room was filled with cordwood soaked in kerosene to a height of two feet. The room was ignited and made into a roaring furnace and allowed to burn for an hour. Water through a fire hose at a pressure of forty pounds to the square foot was applied to the hot partitions at a distance of four feet. One slight bulge and one short crack developed. How long would the ordinary partition withstand such a test?

For greater strength, to carry loads, a bearing partition can be made in exactly the same way except that Portland cement mortar is used for the first coat instead of ordinary patent mortar. Of course in the ordinary small houses the weight of floors above is carried by walls, beams, and floor joists. "Economy in building," said Mr. Flagg, "consists in the aggregate of a great number of savings, which when considered separately may seem trivial, but which when combined are important."

### Mushroom Stone Walls

Nevertheless, there are a few more details that anyone can adopt, some of which are expressions of the fundamental artistic philosophy of this great architect.

The most important of these is the method of building a wall, the use of which to a large extent explains the difference in cost of the two buildings just mentioned, which, of course, are of stone. A rubble wall is built which Flagg calls "mosaic rubble," because the stone is set in dry, like mosaic work. It is constructed, not with masons at \$10 a day, but with ordinary labor at \$4 or \$5. The wall is built in a form in much the way concrete is poured into a form. The flat side of the stone is laid flush with the outer face of the form and concrete is shoveled in behind. No mortar is placed between the stones, but they are laid in dry and mortar is squeezed into the joints afterward when the forms are removed.

In practice forms are made of four-by-four uprights with holes for toggle pins and three-eight-inch planks are placed in position on the inside and outside of the proposed wall. Two feet of wall is constructed by the laborers placing stones and filling in with concrete and left overnight. The next morning the three-planks are slid up and another height of wall built and so on until completion. Concrete corner stones or cut stone for the corners is used. The forms are all "take down" and can be used over and over again. As the wall

grows in height a runway is built to carry the material up for placing.

### Fire-places That Actually Heat

When the wall is completed it is "pointed" or the chinks filled up. This is fast and easy work for a mason, who merely holds his board at right angles to the wall and pushes the mortar off into the holes. The result is a perfect rubble wall as fine as one built by a mason in entirety. And then one thing more—perhaps you don't want a stone finish on the inside of your house. Flagg has found that it is not necessary to erect two-by-fours and then add lath before plastering. No, he simply applies plaster-board to the damp cement in his kind of wall on the side, and the stuff sticks there. Then the plastering is done on the board in the usual way; the latter being a nonconductor prevents condensation and eliminates dampness inside from this cause. All trim—those ornate, molded bits of wood over and around doors and windows—is eliminated. The real member, such as the honest window frame, are made a little more carefully and then allowed to show.

American stairways, ornate and bulky, meet with Flagg's disapproval. They were one of the most expensive fixtures in a house, and to eliminate them he has designed a circular stone stairway made of cement blocks which is both beautiful and utilitarian. It takes up about one-quarter of the space and costs relatively little.

Fireplaces do not heat well. All the "B. T. U.'s" go up the chimney, it would seem. In the house which was building on Staten Island Mr. Flagg had designed the most original fireplace I ever have seen. It was recessed hardly six inches in the interior gable wall, and the only real chimney in sight was on the roof. The finished job, according to the drawings, was to form a hood out over a tile and brick flooring, so that the fire was open on three sides. The hood, resting on tile, is to be made of bronze, dull and rich, and is to extend clear to the roof tree, almost like half a cornucopia. It is going to be a stunning affair, and the chief *motif* of the room, but its purpose is utilitarian, not decorative. It is to be a hot box! It is really to heat the room as no fireplace I know of has ever heated a large room. This idea is an evolution from the Franklin stove and also from a little porcelain stove he once made use of in a German hotel.

(Continued Next Week)

"Camouflage" doesn't pay in advertising. Don't call your cannon a bit of landscape. Be honest and gain the confidence of the public.

## As The Editor Sees It

THE semi-annual report of building operations in Philadelphia for the first six months of this year, published in full on other pages of this issue of the GUIDE is evidence that Philadelphia is experiencing the greatest building boom in its history. Great increase in building is noticeable in all types of building, especially in dwellings, and in all sections of the city.

In the first half of the year 1922, permits were issued for 6,498 new buildings at an estimated cost of \$44,785,830. In the first six months of 1923, permits for new buildings totaled 6,791, at an estimated cost of \$62,740,480. In 1922 additions, alterations and repairs for the first six months totaled 3,868, costing \$7,247,765; this year the same class of work, 3,888, costing \$11,441,240. Total work of all kinds including new buildings, additions, alterations, repairs and miscellaneous for first half of 1923 there were issued permits for 11,905 operations, at a cost of \$74,617,295. In 1922 the first half year had permits for 11,613 operations at a value of \$52,429,145.

The increase in building was not confined to any one month, but every month showed a larger number of permits issued this year than in corresponding months of last year. March showed a greater increase than any other month, and broke all monthly records in the history of the Philadelphia Bureau of Building Inspection. In March, 2,615

operations costing \$21,064,685 were begun. Never have the first six months of any year exceeded the total for the first half year of 1923, \$74,617,295. From the following tables we find the first six months of 1923 exceeded the total estimated cost of building for the entire year of every year on record in Philadelphia excepting 1922.

Year	Operations	Estimated Cost.
1909 .....	17,294	\$ 42,881,370
1910 .....	16,383	37,866,565
1911 .....	16,215	40,030,985
1912 .....	14,907	37,173,635
1913 .....	14,813	38,763,850
1914 .....	15,709	35,419,605
1915 .....	17,712	39,444,125
1916 .....	15,613	49,896,570
1917 .....	8,977	34,016,408
1918 .....	5,950	15,452,670
1919 .....	14,509	65,088,750
1920 .....	12,512	55,305,400
1921 .....	14,654	42,790,780
1922 .....	22,588	114,881,040

The greatest increase in the six months from January 1 to July 1, 1923, over the same period in 1922 occurred in dwellings of the two story type. In 1922, 4,744 operations costing \$21,256,015 were begun; in 1923, 4,892 operations costing \$25,530,830 were started. Three story houses for the same period fell off slightly from the high record of 1922, only 250 operations costing \$3,325,725 were started this year. Last year in the first

six months 301 three story houses costing \$3,519,905 were started. A perceptible increase in the number and value of garages was recorded the first half of this year, in 1922 919 costing \$1,837,470; this year, 1,125 costing \$2,213,000.

Manufactories show a decrease in number, but a large increase in value. In first six months of 1922, 61 manufactories costing \$2,354,310, were started; in 1923, same period, 49, costing \$4,312,600. Schools again showed an increase from 9 costing \$3,665,150 in 1922, to 10 costing \$4,794,755. Tenement houses showed a large increase from 23, costing \$1,252,000 in 1922, to 62, costing \$3,436,840. The largest class of buildings in value, next to dwellings, was office buildings, in which 29, costing \$8,070,200, were begun.

In two story dwellings the forty-second and fortieth wards show the largest number of buildings started. In the forty-second ward a slight decrease in number compared to first half of 1922 is noticeable, 1,841 dwellings having started in 1922 and 1,727 in 1923. The fortieth ward showed a slight increase so far in 1923, 578 to date compared to 551 in 1922.

If 1923 maintains the present percentage of increase for the next six months, the total cost of building in Philadelphia in 1923 will far exceed the record of any year in the history of the city. The building boom manifested in the first six

KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

months of 1923 was confined not only to Philadelphia but existed throughout the entire country. There exists today, however, a lull in building work in Philadelphia as shown by the records of the Bureau of Building Inspection for June which shows a decrease of \$4,819,363, as compared with the corresponding month last year.

Many large projects and a considerable quantity of residential work is held up, due to high costs, particularly of labor. The falling off in quantity of building has been observed by material houses which have shown a tendency to be less stiff in prices. The recession in building is a wholesome condition as the result will be a more sensible appreciation on the part of labor of what it now enjoys, and a more normal distribution of building demand over the year.

### THE NEED TO CARRY ON

American fire losses, after the war, began to climb with astounding rapidity towards the half-billion mark. Last year they reached this point—reached it and kept on soaring until they registered a total of \$521,860,000. For \$521,860,000 is the estimate, made by the Actuarial Bureau of The National Board of Fire Underwriters, of the 1922 aggregate.

This sum, as retiring President John B. Morton reminded those in attendance at the fifty-seventh annual meeting of the Board, rises far above even the total for 1906, which was swollen abnormally by the burning of San Francisco. It represents the largest fire loss ever recorded by any nation for a single twelve-month. Moreover, no great conflagration contributed to this total.

What, then, will account for this monstrous figure? Are there in operation any laws, natural or economic, which tend to make this mounting fire loss uncontrollable? Inflated property values have played a part in raising the total; likewise, the congestion of population in a comparatively small number of cities. But losses by fire have greatly outstripped the growth in population. In 1912, for example, the United States Census Bureau reported a total population of 95,410,503, and the per capita fire destruction was \$2.16. By 1922, a decade later, the population had increased but 15%, while the average individual share in the burning toll amounted to 4.75—a jump of 120%. The contrast between this figure and that recorded for Great Britain during the same year—72 cents!—is shameful.

Inescapable, therefore, is the conclusion that the largest part of this humiliating American fire record in 1922 was the product of public carelessness. Carelessness in America is on a gigantic scale, a scale such as could obtain only in a coun-

try where the memory of days of abundance still is vivid—much too vivid, alas, for our immediate and future good. Our vision mistakes a shade for something palpable. But in Great Britain, and throughout Europe generally, the days of plenty are remote; they departed so long ago that even the tradition of them is misty, is almost forgotten. Loss of natural resources is of course a deplorable thing; still, it is not without compensation, for protection of every kind of property against waste by fire has become, in those lands, a settled rule of conduct to which is born each succeeding generation. Every man feels himself to be the guardian of what remains. So it must become in America; and it will inevitably.

Dismal the present situation appears, but there is not a little encouragement in the certain knowledge that, without the vigorous fire prevention effort of recent years, the 1922 exhibit would have been worse than it was—worse by many millions of dollars.—*Safeguarding America Against Fire.*

(Continued from last week)

Screens? Since he always uses casement windows opening inward, instead of using screen frames that are taken down once a year, Flagg tacks on a copper screen permanently. You can hardly see it from the inside, and it should last as long as the house. Used this way, it is cheaper than ordinary framed wire screens. Leaders to catch the roof water? Not any. He builds a little cement walk close to the foundation wall all the way round to act as a safety, frost-proof blanket. It prevents the rain water from wearing off the ground. He says that leaders are ugly and often spoil the symmetry of an otherwise well-designed house. They are not really necessary, and he uses them only where absolutely necessary over a doorway or along a terrace and then as little as possible. Saves a lot of money too.

*Out of Ruts by Horse Sense*

He makes one of the cheapest and best roofs you ever saw, and they are beautiful. He uses plain roll roofing. This he cuts into nine-inch strips, laid with only a two-inch overlap. But under the overlap is the nail, and running from each nail to the edge of the roofing strip above is a metal clip which holds down the edge of that next strip above so the wind can't lift it. The weather then makes streaks down the line of the clips and you have a stunning cross-hatched roof, laid at half the cost of shingles. He showed me one in perfect condition that has been up for fifteen years.

To me there was a real thrill in seeing

Electric awarded to George Blair, 311 Ardmore street, Trenton, \$982. Heating and ventilating awarded to Burns, Lane & Richardson, New Brunswick, N. J., \$8,897.

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

Man and the giraffe are the only two living things that can't swim naturally. Throw a day-old kitten into the Mississippi and it will paddle its way to shore. The giraffe can't swim because he's not built that way. Man can't swim, just because he is afraid. The chances are that the reason you are not in the swim—financially or otherwise—is because you are afraid.—Glen Buck.

(Continued from page 436)

all this and in hearing this great architect! "People ought to know about the success of these things," he said to me. "The ideas and the work out of the plans are so simple. They mean so much. Anyone who will put his mind to it can think of many more. To work a real revolution that will so greatly lower costs doesn't require anything but a little daring to climb out of the old ruts and the application of a little horse sense. The old ways aren't necessarily best, and an agnostic attitude—the 'show me, I'm from Missouri,' point of view—doesn't hurt anyone."

But my thrill over Flagg and his work was like the thrill I had as a child when I read "Huckleberry Finn," and had my first ride in an automobile and saw my first Shaw play at the age of nineteen—oh, yes, I got it too when I made my first long-distance telephone call.

That is the quality of Ernest Flagg and his work.

We still lack housing and there is still unsatisfied demand for industrial building. Some of our schools are deplorably crowded. There is much public work planned which is not done.

In spite of this, there is an incipient lull in construction. Contractors are advising, architects are advising, and the advice is to the point that construction costs are too high to build. Sometimes we get to arguing about all this and we say, "by the law of supply and demand," or by "economic principles," and in trying to be systematic we travel around in meaningless circles.

What is the real point of responsibility for the present situation? The one and only answer is lack of workmen, skilled and unskilled. That is the whole answer all in one short sentence.

Will deferring projects make more mechanics? Hardly, although if it can be carried to a logical conclusion it will string out the work. But the trouble will be that it will not work out well. In a lull, other industries will pick up some of the men, and builders who do not join you in "lulling" will see to it that they get men.

In the meanwhile rents are high and housing scarce. If we had more workmen we could use them very profitably. In Europe, in England, there are building tradesmen who should be filling the temporary gap in our American supply.

The thought of the construction industry must be directed to this point and the voice of the industry must be raised in one long effective howl for such a constructive amendment of immigration laws as will admit building tradesmen to this country. There is little good to the world

in their suffering for work in their own countries while we are suffering for their services over here. Even if we do make a mistake and let in one or two radicals, we probably will not injure their morals by letting them associate with some of our choicest selected "snowballers."

From organized labor's viewpoint it would seem that the entrance of some skillfully selected building tradesmen would be a good thing. As it is now it is the laboring man who is most afflicted by high rents, and when immigrants other than builders come in they take up housing room but they do not produce living room.

A great boatload docks at Ellis Island and shortly is landed in New York. What does this boatload mean? It means a further strain upon that class of housing which is most strained now. How many builders in the whole steerage? Not any so selected on the other side. The selection is on some sort of a Volstead percentage basis.—*American Contractor*.

### TAKE THOUGHT FOR THE FUTURE

At this time almost every contractor is busy, whether he be large or small. How long this happy state of affairs will continue nobody knows, but nearly all authorities agree that there should be plenty of business for the contractor until late fall at least.

Without wishing to pose either as prophets of gloom or wielders of the wet blanket, we do feel that this is the time for a few words of caution. Out of the experience of history men have learned that for every period of activity there will come a corresponding period of inactivity. Are you preparing for it? Everybody knows that the average contractor lives in the present and has little or no thought for the future. He has won that reputation among business men. When times are good and he has plenty of work he is a free spender. Many times he spends all of the expected profit from a job before it is earned and then mortgages the future. The inevitable result is that when the lean times come he is entirely unprepared. He lets his accounts go behind, he curtails his expenses and cuts his organization, forgetting that in a very few months he will be busy again. How much more sensible it would be if he would lay out a budget of his necessary and proper expenses for the year in advance and then lay aside cash or easily convertible securities during his periods of prosperity and then draw on that reserve during the slack period.

The construction business is made up of a succession of hazards; one might al-

most say it is a gamble. Of course that makes it fascinating; but the wise ones don't take the long chances unless they are forced to do so. There is a great deal of pride in doing a big business; in seeing your name in the papers as the successful bidder on a large number of jobs; in buying a great amount of materials and employing a large force of men; but it is not good business unless you are getting a profit from each job. A firm with a large overhead is compelled to do a large volume of work, and sometimes it is very difficult or perhaps impossible to get a great many jobs without shaving your profits below the danger point. It is an axiom of the construction business that just at the time when you have figured a very small profit and must earn it, that very time is when you are likely to encounter a series of bumps which will result in a loss. There is the alternative of keeping the overhead down and figuring only the desirable jobs with the determination to include a profit or go without the job. Unfortunately there are a large number of contractors who cannot bear to wait. They feel that they must be doing some work. Accordingly, they figure work at cost; they figure on getting all the breaks, when they know that that is impossible. The result is always the same. If they are small operators, each new job has to pay for finishing the last, and they dare not stop. If they did they would be bankrupt. Among the larger contractors the reckoning at the end of the year shows that the profits from two or three profitable jobs have had to offset the losses from a number of bad ones, and the net profit is smaller than it would have been if they had loafed half of the year and done only the good jobs.

One of our general contractors, when asked, in the late fall of 1921, if he was busy, replied, "I have just taken two good-sized mill jobs. All through spring and summer I sat around and watched my competitors breaking their necks and shortening their lives with worry trying to do a lot of work and eke out a meager profit. I shall make more money in the next four months than they did during the entire year."

Do you want to be a big fellow and worry yourself into an early grave, or will you be satisfied with less blaring of trumpets and a sure and comfortable income? Think it over.—*The Associated Contractor*.

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

Modern Plumbing  
Electricity

and now

NOKOL

Approved by  
National Board  
of  
Fire Underwriters

You wouldn't build a house today without providing electricity, modern plumbing, gas for cooking and those other home comforts we have all come to regard as necessities.

A Nokol Automatic Heating System, installed in any house, makes a better house to live in and an easier house to sell.

Investigate now.

Circular mailed on request.

## What If Your Nearly Completed Building Should Burn?

There are two fires every minute, over a million a year. There is nothing to save your building from being next. When so much is at stake, and when the cost of protection is so trifling, should not the voice of self-interest insist that protection be provided? Ask your agent for a North America Builders' Risk Policy. He can get it for you.

## As The Editor Sees It

### EXTRAS! EXTRAS!

By GEORGE A. CHAPMAN, A. I. A.

*Secretary-Treasurer*

The Architects' Small House Service  
Bureau of the United States, Inc.

**E**XTRAS, extras. If you have built a home you probably know what extras mean, not only in added expense but in delays, discussions, disagreements and disappointments.

If you haven't built a home but are planning to do so, look out for extras, if you don't want your home to cost more than you expected.

Probably no part of home building is more exasperating or disappointing than the "extras" to a man of modest means, who often cannot afford to have his home run two or three hundred dollars above the sum set aside for the venture.

Sometimes the home builder feels that the architect has wilfully misled him as to the amount of money necessary to build his home because it is only human to lay the blame on some other head than our own.

### *Keeping Down the Extras*

Sometimes the home builder will bitterly blame the contractor for the extras. It will seem to him as if the contractor who appeared at the start as a fine fellow has suddenly turned into a modern pirate; that he seems bound and determined to make up all possible losses on the job by including them in the exorbitant charge

for the apparently simple little changes and additions the home builder wants made at the last minute.

The above is about the average home builder's viewpoint, but let's see how the average architect and builder look on "extras" and see if there is not some way to keep down building costs by cutting out the extras.

The architect and contractor are quite as much opposed to the so-called "extras" as is the owner. To them extras are a great nuisance. And the additional money cannot make up for the waste, lost time and worry incurred. We are discussing, of course, only thoroughly reliable, honest building.

### *Why Extras Cost Money*

The architect can't quite see why the owner—and this includes Mrs. Owner—cannot make up his mind as to what he—or she—wants and "stick to it."

Changes—changes—changes. Perhaps Mr. and Mrs. Owner, out calling some night, find they like the stairway in their friend's house better than the one designed for their new home. Or Mrs. Owner may wake up some morning with the decision that she "never can get along with just one closet in the front bedroom." So they call on the architect, or the contractor and request the change to be made.

If the house design has been made this will mean new or revised drawings. If

the house is under way, the architect must see how the change will affect all of the correlated parts of the work, such as, the plumbing, heating, electric work etc., which are usually let under separate contracts.

Sometimes an architect plans a house once, but owing to the owner's changeableness, he does enough work to cover the designing of two houses. The added cost for all this work on a commission basis, seldom, if ever, compensates him for the actual additional work. Really, Mr. Owner can frequently "run Mr. Architect ragged," with changes and alterations.

The contractor is in much the same boat when it comes to changes, which, in the main, as I have said are the greatest causes for "extras."

He is delayed waiting for new drawings—orders for materials already placed must be countermanded—new and different materials must be obtained—which all mean delay—delay. And when he has a force of bricklayers, carpenters, plasterers electricians and other specialized workmen at today's top-notch wages, waiting around for work, you can imagine that such delays cause him sleepless nights. His whole building program has been disrupted.

### *You Must Pay the Bills*

If special millwork or other specially manufactured parts are already complet-

**DRAWING  
MATERIALS**

Philadelphia  
KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

ed, a change may mean a complete loss of the finished work, because the mill or manufacturer will expect to be paid for it.

You may be sure that you will be the fellow that, in the end will have to foot the bill. The contractor may realize full well that you, Mr. Owner, will think he is an accomplished robber, a regular Jesse James, holding you up with a bill instead of a gun, but what can he do about it? He is in business to make a legitimate profit, as everyone is—and just to be a good fellow, he simply cannot pay out his own hard-earned money for changes that you order—too late.

Is it possible to eliminate the "extras?"

It can be done away with just like any other nuisance, provided that the three most interested parties in every building operation, that is, the owner, the architect, and the builder, set themselves definitely and in a logical way so to do, and provided that all three are honest in intention and deed.

Also each one must function in his own definite sphere. Let the owner own; the architect design and specify; and the builder build. Don't butt in on the other fellow's job.

Let's get down to fundamentals—let's analyze the situation.

First: What is a contract?

Briefly, a contract, so far as it applies to building, is an agreement between an owner and a builder wherein the builder agrees to furnish all of the labor and material (no more or no less shown) on the plans and described in the specification prepared for a certain building and for which the owner agreed to pay a definite sum (no more or no less).

Second: What is an "extra?"

(a) An extra is the performing of labor or the furnishing of materials (or both jointly) in excess of that definitely stipulated in the contract.

(b) An extra (or a credit) is involved when a change is made in either the quantity or quality of the labor and materials as originally contracted for. Errors in the plans and specifications quite frequently cause "extras" or ("credits").

(c) There are in addition to the above certain provisions in all contracts as to "extras" which are conditioned upon possible circumstances outside the control of either parties to the contract, such as accidents, fires, cyclones, strikes, etc., which, since they are remote and do not ordinarily affect the contract, may be left out of the discussion.

Third: What will eliminate "extras?"

(a) Complete harmony and co-operation of owner, architect and builder, each acting in accordance with the contract agreement within his prescribed field.

(b) Duties of the owner.

1. Determine as definitely as possible the general requirements and details of

the building to be designed and transmit these instructions to the architect in an intelligible manner.

Remember that the architect is not a mind reader.

When the sketches, working drawings and specifications are submitted for approval, be sure you understand them thoroughly.

It is not evidence of "lack of culture or education" to admit inability to read plans and details (architectural drawings) or interpret the technical terminology of specifications.

The architect can always illustrate and explain points in doubt.

2. Arrive, with the advice of the architect, at the maximum amount to be spent and eliminate if need be extravagances and non-essentials until a building of good construction and design is arrived at within your means.

The architect will assist in simplifying your desires to fit your pocket book.

Most owners collect more and conflicting ideas—which they set down as necessities—than can ordinarily be included under a single roof.

3. Give the architect sufficient time to prepare complete plans and specifications.

"Rome wasn't built in a day."

Remember that the architect must first build your home on paper before the builder can estimate upon or build from his plans and specifications.

4. Insist on complete, definite proposals based on the complete house including the plumbing, heating and electrical work.

To the sum total of these, add for such incidentals as are not usually included, such as light fixtures, decorating, shades, draperies, furniture, rugs, grading, walks and drives, planting, etc., and see your finish before you start.

With the advice and assistance of your architect, invite only those contractors to submit proposals who are competent and honest and have definitely demonstrated their ability to build the kind of building you have in mind.

Don't let the incompetents, and their name is legion, even submit estimates—you simply "can't get water out of a stone."

"Hand pick your contractors before you take estimates and then you are safe in awarding contracts to the lowest bidders—those really entitled to the work.

5. Having signed contracts with the various contractors, give no orders or directions to them.

All these must be transmitted through the architect who, as executive in charge of the work, will know at once whether such suggestions involve extra work and material, and thus you will be fully ad-

Drawings and specifications may be obtained from custodian of building or at the office of the supervising architect.

(Continued from page 452)

vised and can avoid an extra if you choose.

#### (c) Duties of the architect.

1. Make sure that the owner understands every detail of the provisions of your plans and specifications.

So illustrate and explain your work that he has a definite, clear mental picture of the house your drawings call for. When owner and architect fully comprehend each other, half the battle is won.

2. Complete plans and details and complete, definite specifications actually cost less to produce, in the end, than slipshod documents which must constantly be supplemented and corrected. Remember that the owner is justified in feeling that you are the responsible person if he is put to added cost through errors or omissions in your work.

3. All directions, approval or disapproval of the work to the contractors should be in writing (conversations are easily distorted or forgotten).

4. Allow no changes or substitutions unless the owner's approval is obtained in writing or he is advised in writing.

5. See that all provisions of the contract are fairly carried out.

#### (d) Duties of the contractor.

1. Carry out all provisions of the contract "to the letter." If difficulties arise, advise the architect (preferably in writing) he is employed by the owner to assist you.

2. Insist that all directions come from the architect in writing and by all means

do all your business with the owner through him.

3. Hand pick your sub-contractors. Don't expect to get good work from those who are incompetent and inexperienced, whose work always reflects detrimentally upon you.

4. Don't eternally try to substitute, unless you are convinced some other material is more than equivalent, or that specified is found to be not readily obtained.

5. Work in close co-operation and harmony with other contractors on the work and again THROUGH THE ARCHITECT as executive.

6. If changes are suggested affecting the cost, submit definite estimates in writing to the architect at once before any work is done that the owner through the architect may be definitely and immediately advised.

What has been set down here about "extras" and added expense in home building are truths. Every architect and contractor knows from experience that the one reason why building expense runs higher than estimates is due to "changes." If these suggestions seem too complex and involved and if they do not appear to apply to a little home, particularly if the home is yours, you are fooling yourself at the start. Remember that every dollar you spend represents a dollar invested in materials, labor, equipment. You want to make that dollar count, you want to keep your building costs down, you want full value for your money, then heed the advice of those who know and first determine upon what you want in your home, what it will cost and then stick to it. Don't make changes.

## A NEW HOTEL IN YOUR TOWN

### II. Determining Its Size

*The second in a series of articles that traces, step by step, the phases through which the hotel project in the medium size city should pass before it becomes a successful reality.*

BY W. L. STODDARD, Architect

*Reprinted Through the Courtesy of "Hotel Management"*

**L**AST month we left Mr. Jones, Blankville's young manufacturer who had been stung by the hotel bee, with a board of directors on his hands—appointed by the local chamber of commerce—and with instructions from that august body to go ahead and do whatever was necessary to give Blankville a new, modern hotel.

Readers will remember that the committee of which Jones was chairman was composed of a banker, a lawyer, a newspaper editor and a wholesaler. It was up to them to start the ball rolling, and when they faced each other over the conference

table they found that they had a unique and totally different ideas as to where they should begin.

Fortunately for Blankville, however, they were good enough business men to recognize their own limitations, so it was not long before they became convinced that there was only one logical course they could pursue—namely, to call in expert technical advice.

\* \* \* \* \*

Let us now leave Jones, his board of directors and the people of Blankville—all of whom are typical of a thousand towns of 20,000 to 50,000 population throughout the country—and proceed to analyze in a more matter-of-fact way the considerations that affect the launching of the average hotel in the average community.

We have chosen the determination of the new hotel's size as the first matter for discussion. Other articles will take up the selection of its site; its cost and financing; the nature of the understanding entered into by the owners and the architect; adapting the hotel to the needs of the city, and the selection of an experienced and successful lessee.

The average board of directors or chamber of commerce committee appointed to initiate a hotel project is seldom qualified to make an intelligent decision as to the size hotel their city will stand. An experienced hotel man—and preferably the man desired as the new hotel's lessee—should be called in. If he managed hotels in cities similar to the one in question—and managed them capably—it is more than probable that he can "size up" the town's hotel possibilities much more accurately than can the owners.

This does not mean, of course, that the directors' views should be ignored. Particularly is this true if a sound, progressive retail merchant, who from the nature of his business should be thoroughly familiar with the ins and outs of the town's inhabitants, is a member of the board. The counsel of men of this type is often invaluable, for they are usually in a better position than others to advise as to how much local support and patronage the new hotel will be able to count on.

Then, too, the other board members—if they are men who have kept closely in touch with their city's development—can also contribute something worth while from their experience—namely their knowledge of the manufacturing, trade or agricultural lines along which the town is expanding. If for example, the city is primarily an industrial one, a smaller number of commercial travelers and fewer tourists can be expected than if it is principally a trading center. Here, then, is another limiting factor the promoters should take into consideration. Probably, however, more out-of-town

buyers could be persuaded to patronize the new hotel in the typical manufacturing city than would be the case in a trade or farming center.

#### *Gauging Local Interest*

The greatest advantage that the board of directors can bring to the problem of determining the size of the new hotel lies, however, in their ability to gauge the interest and patronage that the townspeople themselves will bring to it, and to estimate what effect the institution will have as a stimulus to the city's commercial and social activities. It goes without saying that the directors should do all in their power to arouse the interest of their fellow townsmen to its highest pitch and to imbue in them lasting enthusiasm for the new establishment both as a retreat for them to use personally and in its capacity of stimulating the community's civic pride and development.

Another important factor bearing on the size of the new hotel is the city's location with reference to the surrounding country. Is the town the natural center of interest for near-by activities—whether manufacturing or farming? Is it on a main-line railroad? Does a well-known automobile highway run through it? If these are the conditions it will, of course, support a hotel with a larger number of rooms than would be the case in a city less favorably situated.

Another point worthy of mention in this connection is the fact that a well located community, with sufficient modern hotel facilities, is a logical convention center. A new, modern hotel will frequently bring state and local conventions even if it is not quite as conveniently situated as some other city in the State. This is a point which the board of directors and the hotel's prospective manager should take into consideration. It will be discussed more fully in the article on adapting the hotel to the community's needs which will appear later in this series, but it is mentioned here because the matter of whether or not conventions can be anticipated has a direct bearing on the size of the new hotel.

#### *The Danger in Drawing Outside Comparisons*

The board of directors, in the course of their work, will probably inspect hotels in other cities. If they do this with the idea of drawing comparisons between populations and the number of hotel rooms in various communities, they will be playing with fire. Too many factors enter into the problem of fixing the size for the new hotel to make comparisons with other cities of any great value.

Here is a case in point: In 1917, the O. Henry Hotel of Greensboro, N. C., was opened to the public. It had 175

bedrooms and there were approximately 100 more hotel bedrooms in the town. Greensboro was then a city of 30,000 population, which gives an approximate average of one hotel room to each 109 inhabitants. The hotel was a success from the start. It is, for one thing, situated in a main-line town and—even more important—the people were *leading* the hotel from the word go. Ninety more rooms were added in 1920 (the population had increased to 40,000 in the interval) and the hotel has done a capacity business ever since it opened. The city is now giving consideration to the building of another hotel in order to take care of increased business.

Compare this hotel experience with the following which, except for the name, is also an actual one. Right in the midst of the temporary post-war boom, Rich-town (also 30,000 inhabitants) decided to build a new hotel. A site off the main thoroughfare was selected and no expense was spared to make the institution a "monument" to the community. This hotel had 175 rooms—the community totalled 125 more—but still it could not be successfully operated. Fancy prices had to be charged for one thing, because of the high initial cost of the structure, and there was not a large enough number of commercial travelers or local patrons—particularly when the boom period ended—who could afford to pay the prices necessary. The first lessee of this hotel found it impossible to meet his rental charges out of revenue and sold his lease at a much lower rental, and as the owners of the hotel were also interested financially in the operation both the lessee and stockholders suffered.

How will the town's present hotel accommodations affect the size of the new house? Not one iota in my opinion *unless* one or more of these hotels is also thoroughly modern and up-to-date. I have seen it happen so often that I am thoroughly convinced a new, modern hotel will create business for *all* the hotels in town. I make this statement with the reservation that the townspeople must themselves be heart and soul behind their town and its hotels—as many of them as possible should be stockholders in them. Time and again the effect of a new house has been to stimulate the "hotel idea" in a town's inhabitants—to the benefit of *all* the local houses. Then, too, a new hotel will frequently attract a larger out-of-town clientele than it can alone accommodate, and always a city's population has increased far more rapidly than it ordinarily would have, had not a new hotel been built.

#### *Two Fundamental Factors*

Just what size, then, in the light of all these factors, should the new house be? That is an impossible question to answer

categorically. The following two axioms, however, I believe to be fundamental:

*First:* It is not a sound financial proposition to build a modern fireproof hotel of less than 100 bed rooms. Because of the public space required in a hotel of any size, it takes this minimum number of rooms to produce sufficient revenue to insure the interest on the investment. In making this statement, I am, of course, not speaking of "freak" situations where because of abnormal advantages of one kind or another, a modern hotel of less than 100 rooms has proven profitable.

*Second:* It is a safer business proposition to build conservatively and allow for later expansion than it is to become over-enthusiastic at the start and perhaps be left with a "white elephant."

In every case with which I have come in contact, it has been possible to utilize the plot in such a way as to provide properly for future additions.

Another important point that has a direct bearing on the size of the new hotel is the anticipated revenue from stores and concessions. This revenue should, in my opinion, be equal to the interest on at least 25 per cent. of the cost of the building. The typical ground plan will show how stores can in most cases be worked into the general plan. It is also obvious that the hotel's location with relation to the city's retail center is important in this connection. This phase of the problem will be discussed more thoroughly later.

### GOOD ARCHITECTURE SHOULD EXPRESS THE SPIRIT OF THE COMMUNITY\*

BY CARL F. GOULD

*President, Washington State Chapter, A. I. A.*

The American Institute of Architects, composed, as it is, of local chapters distributed throughout the entire United States, has a cohesive strength and is of value to the various communities and to the country at large just to the extent that each individual is impelled by that apparently indefinable impulse to create in our physical necessities, orderliness and beauty. Just what is it that puts the spirit into the architect and keeps him at his work day by day when he knows from the beginning to the end of his profession that he cannot obtain what all the world seems most to desire—worldly increment. To an outsider who may happen to be present at one of our conventions such subject as building ordinances, competition codes, employment of labor, schedule of charges, etc., would

\*Paper read before the Washington State Chapter A. I. A.

appear to be those which are uppermost in our minds. These subjects are always discussed with a fervor and intensity of feeling by cultured and intelligent men, while the very inner reasons for our existence are apparently ignored. This may be due to the fact that the intimate things of the spirit we never allow to appear in the foreground of our consciousness; it may be we cannot find words that adequately give our feelings expression. We hesitate, while the most obviously secondary things slip easily into words and inhibit an expression of our real feelings.

We cannot easily describe the fervor of feeling of bringing into being something that the world wants—whether it is a shelter for a family or a place in which to worship or a bridge for our traffic to cross upon—but there is a fundamental impulse which when expressed and we see its accomplishment gives a sense of satisfaction. When, however, to these creations we add an element of what is recognized as beauty, the pleasure of creation is greatly intensified. This ingredient of beauty, which is the very soul of our profession, we seldom or ever allow ourselves to consider. I remember so well some years ago at a convention held in Washington, D. C., an address by Lloyd Warren, who died recently, in which he said that the artist in the architect must be in command. I recall also an inspiring statement made at the close of our convention two years ago by Dr. Suzzallo, president of the University of Washington, that we, the architects, were the custodians of beauty, a thought which places an uplifting responsibility upon us and one which we should treasure. It must be just this desire of creation in terms of beauty that puts the spirit into our profession and makes it possible for us to endure its hardships and the frequent lack of public esteem.

I am going to try to analyze for a moment a few of the ingredients of which this term "beauty" in architecture is composed. I realize my utter incapacity for doing this, and beg you not to grow impatient. I shall limit myself to the discussion of a few of the inherent elements in a building which are not usually considered factors in determining its beauty. I shall not discuss proportion or the charm and quality of detail, which we so often think of as the only medium of expressing architectural beauty. These can be best illustrated by taking you for a moment upon a trip to a far country. The very wonder of the Egyptian pyramids draws us to them. We are lifted out of the monotony of our own life into the realm of the spirit of universal man in their presence. No people ever strove harder to divert more of their hard-earned economic wealth to make effective and give beauty of expression to

their belief in the life of the soul than the Egyptians. In the presence of the sheer size of these pyramids an emotion is aroused just as were aroused the emotions of the Egyptians 5000 years ago. Realize for a moment that their mass laid down upon, for instance, the 40-story Smith Building, would completely encompass it and rise many feet beyond its height. It is by the very extent of the mass alone that we are impressed. The wonder which is engendered by this external mass may also be engendered by internal space, such as the interior of St. Peter's at Rome, the Pennsylvania Station at New York, and to a less degree by the interior of the Forestry Building at the university. Sheer size is one of the means by which the architect can create an emotional appeal, and it must be taken into account as a factor or element of beauty. The Egyptians expressed the spirit of their race in terms of horizontality, the stability of line of their temples, of the unbroken silhouette against the sky, of the unpierced walls, of sturdy columns with their flat roofs and sombre interiors. Stability, endurance, finality, are the feelings we have in the presence of these big hypostyle halls. These were the architectural elements to which the Egyptians attached importance, and to them these were the essence of their life, and it is these appealing emotions of the ages which we travel many thousands of miles to obtain.

For a moment let us enter into the spirit of the mediaeval architectural expression, and we develop a series of entirely different emotions. The moment we set foot in the most marvelous of all buildings, a cathedral of the Gothic period, the eye does not travel horizontally as in Egypt, but follows up the attenuated clustered supports into the mysterious maze of pointed forms overhead. The whole seems not borne by earth, but something hung in the air. The weight of tradition is not upon us; a precedent plays no part. A vibrant atmosphere grips us. Imperfect in its incompleteness, maybe, but aspiring to infinity. Such is the emotional appeal that the great architects of the middle ages gave to the world a thousand years ago and to which we still respond.

The cool splendor of Greek architecture neither attempts to impress us by its sheer mass nor by its aspiring quality, but through the intellectual relationship of its parts and the exquisite refinement of all its elements, which can only be perceived and enjoyed by the highest type of mind; while beauty to the Roman was not primarily expressed in terms of refinement of parts, but by sumptuousness of detail and by a variety of forms, principally by the use of the arch and the vault.

These are all qualities which we usually do not consider as pertaining to beauty, but without which the monuments of the past could not have emotionalized the world down through the ages.

Until we can in our present forms of building attain to something which in its inherent mass expresses an intention which is a natural outcome of our present life and civilization, can we really hope to give to the world an architecture which will be of permanent beauty. At the present time we are so overlaid with a confusion of impressions and emotions that we have apparently no dominating one which gives a direction to our thought and from which the architect can obtain positive inspiration. On the one hand we find a structure like the Woolworth Building, piercing the air with a vibrant vertical effect, apparently satisfying all the elements which make for beauty, an inspiration which one would think would be followed. A new office building, however, is constructed in its vicinity, notably the new telephone building, the most costly office building in the world, made up of a series of super-imposed Greek marble temples, having no apparent intention of and totally contradicting its magnificent neighbor.

We have our court houses, post offices and our libraries expressing calm horizontality; we have our institutions of learning, expressing verticality; our city streets are made up of contradicting elements, and beauty exists only in isolated buildings here and there, not in the coherent relationship of a building to its neighbor. An eminent Frenchman in a recent interview states that "it is disconcerting to turn from manifestations of American architectural genius to the unsightly streets nearby, in the building of which all consideration apart from the strictly utilitarian would seem to have been banished. Houses big and small, handsome and hideous, pretentious and insignificant, ornamental and sordid, huddled side by side in jarring promiscuity, mute testimony of the stern material necessities and the preoccupations of the past. One is tempted to liken New York architecturally (he continues) to a garden overgrown with gigantic weeds, cleared in parts to make room for fair, well-trimmed avenues. Yet on all sides I see such strong evidence of a swiftly developing national artistic temperament that I am convinced the present blemishes will in due course be swept away."

(Continued Next Week)

"Camouflage" doesn't pay in advertising. Don't call your cannon a bit of landscape. Be honest and gain the confidence of the public.

## As The Editor Sees It

### ANALYSIS AND INTERPRETA- TION OF THE 1923-24 BUILD- ING PLAN

BY ALLEN E. BEALS

*of The Allen E. Beals Corporation*

Building construction as a national in-  
dustry appears to be mired in prosperity.

There is something indefinable in the  
wind that is making a boggy condition  
still more soggy. Captains of industry,  
believing that reaction follows action as  
truly in economics as in physics, are  
casting about for a way out of a quag-  
mire that may assume dangerous pro-  
portions before they reach the floundering  
stage.

When excess of demand produces, in  
proper time, excesses of supply, stabil-  
ization of price ensues. If the pendulum  
swings too far in favor of excess of sup-  
ply stagnation results.

The puzzling thing about the situation  
as it has developed during the first half  
of 1923 is that, although there has  
seemed to have been plenty of chances  
for supply to catch up, it still lags be-  
hind. But the tantalizing thing about  
the phenomenon is that no one will say  
that demand has been fully satiated; yet  
it is unmistakably waning.

After several years of intermittent ex-  
cessive demand and depression, supply  
of basic building commodities throughout  
the Eastern portion of the United States,  
at least, remains from a month to a

quarter of a year behind demand. In-  
vesting builders see in any present sur-  
cease from construction work, under ex-  
isting conditions, only a temporary res-  
pite, with possibilities aglow for still  
higher construction costs later on. If  
present building plans are pushed to ac-  
tive operation, the market will be forced  
to pay more for what it wants or go  
without. When the market decides to go  
without, prosperity is hampered, credits  
freeze, because the market becomes  
chilled, and demand accumulates to still  
further confound the builder of a later  
year.

Investing builders of the East, and ap-  
parently a large section of the West find  
themselves asking each other either in  
convention hall or office building cor-  
ridors: "What is the way out?"

Building construction as an industry  
is, at the close of the first half of the  
year, approximately \$2,000,000,000 be-  
yond normal. Building material produc-  
tion is proceeding at approximately  
\$900,000,000 beyond its topmost record in  
1916. Building labor only fills seven-  
tenths of the national demand, under the  
circumstances, hence "cost of construc-  
tion" rather than "cost of materials"  
is the dominant mire-producing factor,  
because labor heretofore has been able  
to command wages in proportion to its  
control of the building situation. In  
other words, labor today holds the East-  
ern building construction situation with-

in its power to say whether it stays  
mired or not.

True analysis of the situation of the  
hour must start from causes created by  
the war. It is the natural result of a  
surplus of gold already in possession of  
the United States Government and of  
enormous credits that represent many  
more billions than we already have con-  
trol of.

There is nothing to indicate at this  
time any incident in international poli-  
tics than can loom large enough to ar-  
rest this inflow of gold. Quite on the  
other hand, returning visitors to Europe,  
who are in a position to obtain authori-  
tative information regarding the prog-  
ress of diplomacy and commercial nego-  
tiation say they were assured that the  
settlement of the problem of the Ruhr  
is a probability of the near future.

Be that as it may fundamentals con-  
trolling the future of building in the  
Eastern part of the United States are  
sound. There is no decomposition set-  
ting in at the core as far as economists  
can see. The approach of the Presiden-  
tial election, however, is beginning to  
have its usual retardent effect upon in-  
vestment money.

The rigors of the campaign may even  
cause a temporary shrinkage of com-  
mercial money and may slow up institu-  
tional and endowment money for build-  
ing construction investment, but just so  
long as bonds and similar forms of se-

curity bring 4, 4½, 5 and 5½ per cent., while first-class mortgages bring 6 per cent. and a bonus, there will be no basic lessening of demand for building material, there need be no reduction in building material, equipment or appliance production schedules, nor need building material, equipment or appliance factory expansion programs be postponed.

The worst that can happen to the building construction industry is a shift of dominant type of building construction, from habitational to commercial, institutional and industrial.

It has been a surprise to economists that commercial and industrial building construction has lagged so far behind housing. The tax exemption ordinances and other artificial means of stimulating a type of construction only partly accounts for the exhibit. But there is ample evidence that an overbalanced construction market is not always beneficial, notably the action of the New York Board of Aldermen in this year modifying the tax-exemption ordinance it passed on June 26.

It is a safe statement to make that even realty authorities now question the wisdom of carrying this emergency legislation to the extent it has been carried, namely, to a point where speculative multiple family housing enterprises have so raided the market for labor that wages have been forced far beyond established wage rates and have torn asunder the morale of the building construction craftsmen of New York that only a general building construction reaction can now cure. It has also been instrumental in artificially creating a demand for materials that the plant resources were unable to supply, thus keeping construction costs for legitimate builders, and even private home owners, so far out of their reach that they have been forced out of the market in many instances.

Every day in the year the population of the United States increases by 4,620 persons according to the Census Bureau. At five persons to the average family and a family to an apartment or home, there is here represented a daily demand in the nation for 924 habitations. It takes from six months to a year to erect a modern apartment house and from four to eight months to erect a dwelling.

Just after the war, when the Department of Labor launched on behalf of the United States Government a "build now campaign," it was announced that this country was short a million homes. According to competent authority, there have since been erected up to the opening of the 1923 building season 798,110 homes, including apartments, flats and dwellings, but not including apartment hotels and asylums. Had the country been

able to supply men and materials for these remaining 201,890 homes, there would still remain a demand for 808,800 apartments or homes as represented by the requirements of the normal daily population growth of the country.

To demonstrate the extent of expansion required of the industry to meet this sudden demand, let us pick out one basic building material commodity of which it may truly be said: "It enters in some form into practically every type of construction effort of man."

Cement meets this test. It supplies the best illustration of what it has meant for building material manufacturers to meet, not only the normal national growth of a country but its emergency war needs for a dependable building material, easily portable, pliable and reliable in the finished job, and, later, to meet not only building construction needs of all kinds, but in addition, the nation's road and other engineering requirements as well.

In order first to obtain the proper relation between building construction requirements and engineering requirements for cement let the following be noted: Cement used for farm buildings throughout the United States .92 per cent. of production; housing construction, 5.17 per cent.; industrial buildings, 25.18 per cent.; highways and engineering work, 69 per cent.

This representative building material, then, increased its production at manufacturing centres as follows:

	Barrels Per Year.
1915 .....	85,000,000
1916 .....	91,000,000
1917 .....	92,814,202
1918 (war) .....	71,081,000
1919 .....	80,777,935
1920 .....	100,302,000
1921 .....	98,239,000
1922 .....	113,870,000

Still, even with such a showing in building material demand as is here revealed (and it compares favorably with other basic building materials in proportion to the universality of their respective uses) there are companies who are practically sold out for the remainder of 1923. In other words, if they had more mill capacity they could sell still more cement.

The direct cause of the present stalemate in the building construction industry lies in the fact that at no time save in 1921, has building material production ever had even a chance to catch up with demand, and then it could not do so because of fuel and railroad difficulties, legislative investigations and other political disturbances that chilled credits to building material producers and left them still further unprepared for the

Henry Hess, D. D., Drexel Hill, Pa. Architect taking sub-bids due as soon as possible. George H. Evans taking bids on carpentry and mill work and masonry.

**Road Reconstruction**, Pennsylvania. Owners, State of Pennsylvania, Department of Highways, Harrisburg, Pa. Owners taking bids due August 7th at 10 A. M. for reconstruction of following roads. Plans, \$2.50 per set.

Beaver County, Appli. 2578, Center and Hopewell Townships, 2,303 feet. One course reinforced concrete. Certified check, \$1,000.

Delaware County, Route 133, Marple and Newtown Townships, 16,310 feet. Either bituminous surface course on concrete foundation, or one course reinforced concrete. Certified check, \$2,500.

Delaware County, A-1242 and 1249, Trainer Borough and Lower Chichester Township, 7,881 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$1,500.

Erie County, R-295, A-2316, 2317 and 2318, Elk Creek and Conneaut Townships and Cranesville Borough, 23,775 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$4,000.

Erie County, R-86 and 272, A-2327 and 2328, Fairview Township and Fairview Borough, 23,775 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$4,000.

Indiana County, A-2431, Burrell Township, 612 feet. One course reinforced concrete. Certified check, \$1,000.

McKean County, R-95, Spur A-2273, Wetmore Township and Kane Borough, 14,953 feet. One course reinforced concrete. Certified check, \$3,000.

Monroe County, A-2452, Pocono and Paradise Townships, 7,051 feet. Bituminous surface treated macadam. Certified check, \$1,000.

Northampton County, A-2227 and 2228, Upper Nazareth and Bushkill Townships, 15,527 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$3,000.

Northampton County, A-2355, Lower Mt. Bethel Township, 34,422 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$4,000.

**Resurfacing Roads**. Owners taking bids due August 7th at 10 A. M.

Butler County, Route 73, Center and Butler Townships, 11,202 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$2,000.

Fayette County, Route 247, Dunbar Township, 10,855 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$2,000.

Greene County, Route 111, Franklin Township, 12,017 feet. Either bituminous surface course, Spec. "D" (base course to be reconstructed by the State Highway Department and is not included in the proposal). Certified check, \$1,000.

Tioga County, Route 196, Richmond and Covington Townships, 13,977 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$2,000.

**Road Reconstruction**, Pennsylvania. Owners, State of Pennsylvania, Department of Highways, Harrisburg, Pa. Owners taking bids due August 8th at 10 A. M.

Dauphin County, Route 1, Halifax and Upper Baxton Townships, 3,199 feet. One course reinforced concrete. Certified check, \$1,000.

Delaware County, A-2573-74-75, Springfield, Marple and Upper Providence Townships, 18,206 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$3,000.

Erie County, R-258, A-2331-32-34, Mill Creek, Summit and McKean Townships and Middleboro Borough, 27,876 feet. Either bi-

tuminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$4,000.

Erie County, R-258, A-2357, Washington Township, 7,731 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$1,500.

Lehigh County, Route 163, Slatington Borough, 3,666 feet. Concrete and brick. Certified check, \$1,000.

McKean County, Route 211, Appli. 2369, Otto and Foster Townships, 15,654 feet. One course reinforced concrete and hillside vitrified brick. Certified check, \$3,000.

Monroe County, Route 167, Appli. 2195, East Stroudsburg Borough, 6,397 feet. Either vitrified brick on concrete foundation or bituminous surface course on concrete foundation. Certified check, \$2,000.

Northumberland County, Point Township and Montour County, Mahoning Township and Danville Borough, Route 2, 15,659 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$3,000.

Northumberland County, Appli. 2222-23-24, Washington and Plainfield Townships and Bangor Borough, 42,580 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$4,000.

Susquehanna County, Appli. 2513, Montrose Borough, 1,030 feet. One course reinforced concrete and hillside vitrified brick. Certified check, \$1,000.

York County, Route 124, Appli. 2178, Dover Borough, 3,749 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$1,500.

**Road Resurfacing**, Pennsylvania. Owners taking bids due August 8th at 10 A. M.

Armstrong County, Route 69-70, South Buffalo Township and Butler County, Route 70, Buffalo Township, 14,368 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. Certified check, \$2,000.

Fayette County, R-247, Perry Township, 12,994 feet. Bituminous macadam (penetration method). Certified check, \$1,500.

Northampton County, Route 175, Upper Nazareth Township, 20,005 feet. One course reinforced concrete. Certified check, \$2,500.

Washington County, Route 108, North Strabane Township, 7,272 feet. Either bituminous macadam (penetration method) or bituminous surface course on reconstructed base course. Certified check, \$1,000.

**Building (alts.)**, Third and Locust streets, Harrisburg, Pa. Architect, C. J. Lappley, Cotterel-Ebner Building, Harrisburg. Owners, Security Trust Co., J. O. Porrmann, president, premises. General alterations, tile and marble work, bronze work. Preliminary plans in progress.

**Residence**, York, Pa. Architect, H. E. Yessler, Rupp Building, York, Pa. Owner, F. H. Bierman, 646 Cleveland avenue, York, Pa. Brick, 2½ stories, 26x39 feet, slate roof, hardwood floors, vacuum heat, electric light, tile work. Architect will be ready for bids in one week.

**Tuberculosis Hospital Building**, West Mountain, Scranton, Pa. Architect, David H. Morgan, 426 Connell Building, Scranton, Pa. Owners, County of Lackawanna, Ranson Township, Scranton, Pa. Brick, concrete, cut stone, steel, 2 stories and basement, 97x46 feet (plumbing, heating and electric separate), slag roof, cement, yellow pine and composition floors, hollow tile, roof ventilators, damp-proofing, terra cotta, ornamental iron work, floor hardener, bond, rolled steel sash, tile and marble work, metal lath, steel lumber. Architect taking bids due August 1st.

**Orphanage**, Orwigsburg, Schuylkill County, Pa. Architect, Paul Monaghan, 1713 Sansom street, Philadelphia. Owners, St. Francis' Orphans' Asylum, on premises. Brick, cut stone, steel and reinforced concrete, 3 stories and basement, 270x72 feet, wing 86x55 feet, 40x51 feet, slate composition, promenade, tile roof, cement, oak and maple floors, metal lath, rolled steel sash and skylights, roof ventilators, waterproofing, bond, iron stairs and work (heating, plumbing, electric, elevators, kitchen equipment, bakery and laundry equipment reserved). Architect will take new bids in a few months.

## Pennsylvania Contracts Awarded

**Junior High School**, Seitz avenue and Berwick street, Easton, Pa. Architects, William Michler and J. W. Shnyder, Drake Building, Easton. Owners, School District, City of Easton, R. E. Peifer, secretary, 30 North Second street, Easton, Pa. Stone, 2 stories and basement, 110x235 feet, maple floors, concrete floors, hollow tile, metal lath, safety treads, roof ventilators, metal weather strip, waterproofing and dampproofing, rolled steel sash, bond, floor hardener, iron stairs (heating and ventilating, plumbing and electric wiring separate bids). Contract awarded to Benjamin Rymon, Phillipsburg, N. J., \$285,324, but not yet signed.

**Allentown Central Office Building (int. alts.)**, Loudon and Hale streets, Allentown, Pa. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Bell Telephone Co., Seventeenth and Parkway, Philadelphia. Steam heat, electric light, metal lath, tile, marble and terrazzo work, hollow metal sash and doors, kalamein doors, bond, iron work and stairs, carpentry and mill work, plumbing, hardware, hollow tile, cork and tile floors, kitchen equipment. Contract awarded to Franklin M. Harris Co., 1520 Parrish street.

**Manufacturing Building**, Ambler, Pa. Architect, Harry F. Rishel, care of owner. Owners, American Chemical Paint Co., J. H. Gravel, 1126 South Eleventh street, Philadelphia. Brick, reinforced concrete, slate, 82x98 feet, 2 stories (heating, elevators reserved), slag roof, cement and plank floors, rolled steel sash, bond, iron work. Contract awarded to Behling Bush Co., Drexel Building.

**School (alts. and add.)**, Reading, Pa. Architect, Fred Muhlenberg, Liberty Bank Building, Reading, Pa. Owners, Lee Stewart School, care of architect. Brick and frame, 2 stories, 20x50 feet, composition roof, hardwood floors, steam heat, electric light, general interior alterations. Contract awarded to William R. Fromm, 706 North Thirteenth street, Reading, Pa.

**Road Work**, Pennsylvania. Owners, State of Pennsylvania, Department of Highways, Harrisburg, Pa.

York County, Route 216, Section 3, A-2175, Lower Chanceford Township, 26,812 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. \$235,182.78. Contract awarded to Comerford Const. Co., Fifth and Sansom streets, Philadelphia.

Clarion County, Routes 214 and 311, A-1940, Sligo Borough, 5,187 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete, \$55,397.20. Contract awarded to Thomas W. Munro & Co., Dubois, Pa.

**Convent**, York, Pa. Architect, Edward Leber, Hay Building, York, Pa. Owners, St. Mary's Parish, Rev. George J. Breckel, 309 South George street, York, Pa. Brick, 2½ stories, 30x60 feet, slate roof, hardwood floors, electric light. Contract awarded to F. H. Wagaman, York, Pa.

**Factory**, Stewartstown, Pa. Architect, H. E. Yessler, Rupp Building, York, Pa. Owners, Hopewell Furniture Co., on premises. Slow burning construction, 3 stories, 86x150 feet, slag roof, electric light, elevators, rolled steel sash and skylights, fire doors, waterproofing, iron stairs. Contract awarded to J. Wickersham, Breneman Building, Lancaster, Pa.

## New Jersey Construction News

**School**, Northfield, N. J. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City. Owners, Northfield School Board, Pleasantville, N. J. Brick. Preliminary plans in progress.

**Industrial School**, Atlantic City, N. J. Architect, Bertram Ireland, Guarantee Trust Building, Atlantic City. Owners, Atlantic City School Board, H. Young, secretary, Atlantic City, N. J. Brick, 3 stories, 43x125 feet, reinforced concrete roof, hardwood floors (heating, electric work and plumbing reserved), rolled steel sash and skylights, roof ventilators. Plans in progress.

**Stores (alts.)**, Michigan and Atlantic avenues, Atlantic City. Architects, Dobbins & Schmidt, Segal Building, Atlantic City, N. J. Owner, care of architects. New front, copper work, plate glass, general interior alterations, tile and marble work. Plans in progress.

**Residence (alts. and add.)**, Trenton, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owner, Dr. Horace D. Bellis, 437 East State street, Trenton, N. J. Brick, 1 story operating room addition, composition floors, tile work, general interior alterations. Plans in progress.

**Apartments**, Atlantic City, N. J. Architects, Dobbins & Schmidt, Segal Building, Atlantic City, N. J. Owner, H. Hoffman, 1809 Atlantic avenue, Atlantic City, N. J. Brick, stone, 3 stories, 42x80 feet, slag roof, hardwood floors, hot water heat, electric light, tile and marble work, metal lath, waterproofing, ornamental iron work. Plans in progress. Owner will sub-let.

**Apartment**, Atlantic City, N. J. Architect, V. B. Smith, Guarantee Trust Building, Atlantic City, N. J. Owner, Mr. Brilliant, States avenue, Atlantic City, N. J. Fireproof, 6 stories, 40x112 feet, slag roof, hardwood floors, metal lath, tile work, hollow tile, electric light. Architect will be ready for bids next week.

**Boiler House and Laundry**, Atlantic City, N. J. Associate architects, H. A. Stout, J. V. Mathis and J. H. Vaughan, Guarantee Trust Building, Atlantic City, N. J. Owners, Atlantic City Hospital, care of Mr. J. Moore, South Ohio avenue, Atlantic City, N. J. Brick, concrete and steel, 2 stories, 50x55 feet, slag roof, concrete floors, electric light, rolled steel sash and skylights, fire doors, waterproofing and dampproofing. Plans in progress. Architects will be ready for bids in ten days.

**Bank Building**, Eighth and Ashbury avenue, Ocean City, N. J. Architects, P. A. Davis, 3rd, and Dunlap, 1713 Sansom street, Philadelphia. Owners, Ocean City Title & Trust Co., Ocean City, N. J. Stone and rock, steel and concrete. Plans completed. Architects will be ready for bids in two weeks.

**Residences (2)**, De Klyn street, Trenton, N. J., \$6,000. Architect, private plans. Owner, Fred Reiger, 1228 South Broad street, Trenton, N. J. Brick and frame, 2½ stories, 14x40 feet, slate roof, pine floors, electric lighting. Owner will build.

**Pumping Station**, Audubon, N. J. Architect, private plans. Owners, Borough Commissioners, J. W. Zanger, Director of Highways, Northeast Corner Central and Marchant

streets, Audubon, N. J. Furnish and installing two vertical centrifugal sewerage pumps. Owners taking bids due July 24th, 8.30 P. M. (daylight saving). Commissioners' Chamber, School No. 2.

**Road Work**, Absecon Boulevard, Atlantic City, N. J. Engineer, County Engineer, 626 Guarantee Trust Building, Atlantic City, N. J. Owners, Board of Chosen Freeholders of Atlantic County, Atlantic City, N. J. Asphalt block on concrete, 106,000 square yards surface, 109,000 square yards concrete base, bond. Owners taking bids due August 8th.

**Bridge**, Independence, Warren County, N. J. Engineer, John L. Vogel, 772 Broad street, Newark, N. J. Owners, State Highway Commission of New Jersey, A. L. Grom, Trenton, N. J. Steel, 3 span, bond. Owners taking bids due August 2nd.

**Water Works**, Stone Harbor, N. J. Engineer, Joseph L. Sweigard, 1120 Lincoln Building, Philadelphia. Owners, Borough Council of Stone Harbor, N. J. Pumping station, reinforced concrete reservoir, artesian wells, bond. Owners taking bids due August 6th at 9 P. M.

## New Jersey Contracts Awarded

**School**, Pleasantville, N. J. Architect, Bertram Ireland, Guarantee Trust Building, Atlantic City. Owners, Board of Education, C. Smith, secretary, Pleasantville, N. J. Brick, concrete, 1 story, 56x90 feet, slate roof, reinforced concrete floors, hollow tile, metal lath, roof ventilators, waterproofing, dampproofing, iron work. Contract awarded to J. Green, Pleasantville, N. J.

**Factory**, Trenton, N. J., \$80,000. Architect, private plans. Owners, Hamilton Rubber Mfg. Co., Mead and Prince streets, Trenton, N. J. Reinforced concrete and brick, 4 stories, 72x274 feet, slag roof, electric light, elevators, roof ventilators, rolled steel sash, fire doors, iron stairs. Contract awarded to Karno-Smith Co., Broad St. Bank Building, Trenton, N. J.

**Parochial School**, Seventh and Federal streets, Camden, N. J. Architect, F. Ferdinand Durang, 1220 Locust street, Philadelphia. Owners, Immaculate Conception Roman Catholic Church, care of Rev. J. Fitzgerald, Camden, N. J. Stone, 2 stories and basement, 110x65 feet, slag roof, pine floors, steam heat, electric light, iron work. Contract awarded Sutton & Stephenson, 1317 Washington avenue.

**Annex**, Metuchon, N. J. Architect, Emil G. Perrot, 1211 Arch street, Philadelphia. Owners, St. Joseph's Novitiate, Metuchon, N. J. Brick, cut stone, castone and steel, 3 stories, 105x43 feet, slate roof, composition, cement and pine floors, roof ventilators, slate roof, metal ceilings, iron work and stairs, floor hardener, bond, kalamein floors, rolled steel sash. Contract awarded Walter J. Meagher, Perth Amboy, N. J.

**Manufacturing Building**, Jefferson street, Camden, N. J. Architect, private plans. Owners, McAndrew & Forbes, Third and Jefferson streets, Camden, N. J. Brick and steel, 1 and 2 stories, 60x160 feet, slag roof, cement floors, rolled steel sash and skylights, fire doors, iron work. Contract awarded to Barclay White Co., Presser Building, Philadelphia.

**Apartments and Stores**, 1551 Hamilton street, Trenton, N. J., \$40,000. Architect, private plans. Owner, Sarah A. Bendal, 1158 Hamilton street, Trenton, N. J. Brick, 3 stories, 45x62 feet, slag roof, hardwood floors, hot air heating, electric lighting, tile work. Contract awarded to Griffith & Watkins, 322 South Cook street, Trenton, N. J.

**Residence**, 1850 South Clinton street, Tren-

ton, N. J., \$6,500. Architect, private plans. Owner, W. W. Smith, care of builder. Frame and concrete block, 20x32 feet, tile roof, hardwood floors, electric lighting. Contract awarded to Carl Poinsett, 37 Maple avenue, Trenton, N. J.

## Miscellaneous Construction News

**Residence**, College Park, Frederick, Md. Architect, Edward Leber, Hay Building, York, Pa. Owner, Thomas H. Haller, College Park, Frederick, Md. Brick, 2½ stories, 40x30 feet, slate roof, hardwood floors, vapor heat, electric light, tile work. Plans in progress.

## Proposals

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., July 18, 1923. Sealed Proposals will be opened in this office at 3 P. M., August 2, 1923, for remodeling and refinishing certain rooms in the Post Office and Court House, at Philadelphia, Pa. Drawing and specification may be obtained from the Custodian of the building or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

## GOOD ARCHITECTURE SHOULD EXPRESS THE SPIRIT OF THE COMMUNITY

(Continued from Last Week)

The selection of the type of architecture with which we express a building for our client is seldom if ever based on a deep conviction rarely if ever does the client bring any intelligent reason to bear on why he wants one type of building rather than another; the only demand he makes is that it be entirely dissimilar to any building in the vicinity. How, then, is it possible for us to obtain beauty in the total effect of our buildings if we cannot agree on any singleness of purpose. Is it not true that in this Northwest corner of the United States, with Canada touching us on the north, here is a certain individuality apparent which might be translated and expressed in architectural terms? Are we not as a group quite different in feeling and sentiment from the people of California? Is not the habit of mind of our people different from that in the south? Are not the variations in our climatic conditions a partial cause for this difference? What little historic background we have is not the same. Do not our conditions more closely approximate those of Northern Europe, whereas California approximates the conditions of the Mediterranean basin? If this is true, the horizontality, the calmness, and the massive walls belong to California, while the vibrant verticality, the small extent of walls with large window area, are characteristic of us. Therefore, it seems to me that if our clients do not help to bring

unity out of chaos, it is not our duty to attempt to do so by conscious agreement? However beautiful an individual building may be, if it does not conform to the conditions of the community in which it is placed it does not contain the fundamental elements of beauty. Even if the most beautiful building in the world, such as the Taj Mahal, were transported to the British Isles, it would be an exotic thing, just an object d'art which would be in a museum case.

It seems to me that we architects should strive to discover or evolve or transport an architectural type which most nearly seems to fit our conditions and accept it as a basic point of departure, and each one of us as best we can evolve and apply such a type, until either we or those who come after us are able to wield it into a form which perfectly expresses our community, as did the temples of the Egyptians and the Churches of France each express the spirit of their communities.—*Architect and Engineer.*

(Continued from page 468)

great rush that was due in 1922 and in 1923.

The country has come to a point at present when it is taking a second breath for a fresh start in building construction activity. Scanning the market, it shows a disposition to discount multiple housing as a commercial building type and to look toward business construction, factory expansion, municipal and engineering works as the bigger market of the immediate future.

It has been a puzzle to students of building construction trend to note commercial and industrial construction lagging so far behind in activity, but it should be remembered that this type of construction seldom anticipates demand, like housing and municipal improvement. It takes at least two years of prosperity to force factories into bigger space. Loft building and office building space is not usually in acute demand until the factories have a larger capacity to keep moving, thereby requiring branch offices to keep closely in touch with their markets. Danger of railroad congestion necessitates warehouse space and lofts for showrooms. Both of these conditions press heavily upon hotel accommodation and theatres and fine stores for visiting buyers and sales executives and their families.

But all this prosperity hinges upon the individual with money to spend. He is the man with an annual spending limit of \$5,000 a year. When he is flush he buys, or saves and invests his money in a home. These \$5,000 a year "backboners" would be putting up a great many more homes if construction costs were not so high. They are waiting for

conditions to even themselves up and they want to know how long it is going to take.

Answering his inquiry answers at the same time the query of many a sales manager throughout the land who is getting out his semi-annual report to the executives at home.

Those of the building construction and allied industries will note these cross-currents that have brought about this quagmire condition in the industry and, bearing in mind the following, they can apply their own deductions to their own particular business and thus draw their own conclusions as to their future policies:

If they depend upon the housing market for their chief sustenance, it is safe to counsel waiting at least until after the October renting season. If their line is in heavy competition and has a multiple family use, the best plan is to advise against expecting an active market until after the Spring renting season passes.

Commercial and industrial construction projectors have waited long since the war to ascertain whether the era of national prosperity is firm or fickle. As far as national and international monetary conditions are concerned, they show that the buying power of the American public cannot be greatly curtailed so long as the chief market for American goods remains in America itself.

When international markets develop (and they are even now reserving the old order of things by sending American cement to Europe as ship ballast), it will intensify rather than diminish American buying power and at the same time create a greater tax upon American factories which must expand, a fact that will intensify rather than retard American prosperity.

There must be expected, however, some slight reaction in the tendency of the public to freely spend. People are beginning to wonder how long this easy income and equally easy outgo can last, and the shrewd ones are beginning to think of the times when money will not come so easy. There is a big bump of precaution in a Yankee's head, and the forthcoming disturbances in domestic politics is going to encourage him in his policy to cut down his expenditures.

This slowing down process is already noticeable, even in larger Eastern construction projects. The process may continue for the forthcoming six months. The possibilities of a change in national Administrations also may force some temporary tightening of credit here and there for purely precautionary reasons.

But this does not disturb in the least fundamentals that will survive whatever turn domestic politics may take. The demand for new building construction

has been shown to still exist, but the capacity of building material plants to meet that demand is not there. It cannot be there until it has had a chance to catch up with demand. Bigger markets for building commodities await them, and the quicker the industry can catch up with the national construction stride the quicker will be restored the long-deferred hope of stability in the building business.—*New York Times*.

#### CONCRETE FLOOR TESTS

The hollow tile and reinforced concrete floors of the Arlington Building, Washington, D. C., occupied by the U. S. Veterans' Bureau, were tested by loading them and measuring the deformation.

In this structure, the tiles were placed in rows and spaced four inches in each direction. Reinforcing steel was placed in these spaces near the bottom of the slab in the panel and near the top of it across the supporting beams. The concrete was poured around the reinforcing bars and into the open ends of the tiles.

The building was intended for a hotel but was later turned over to the Government for the use of the Veterans' Bureau. The original design load of 75 pounds per square foot was increased to 100 pounds per square foot and the increased strength obtained by a two-inch layer of concrete over the tops of the tiles.

The panels of the floor were loaded with wand bags up to 380 pounds per square foot and the stresses in the steel and the concrete measured. The maximum stresses developed in the steel reinforcement were about 27,000 pounds per square inch and those in the concrete about 1,600 pounds per square inch. The effect of time under load was to increase the stresses in the reinforcing steel from 15 to 20 per cent. This was particularly pronounced in the first 20 hours and was comparatively small later.

The panels tested varied in the ratio of length to width. It was found that with the increase of that ratio, the stresses in the reinforcing steel at the bottom of the slab and those at the top of the slab (across the girders) increased in the direction of the short span and decreased in the long one. The stresses in the girders were lower than those in the slab.

The factor of safety of the structure was greater than two. This factor is the ratio of the maximum load the structure can sustain to the load which can be safely allowed when the building is in use.

These tests are described in Technologic Paper No. 236 of the Bureau of Standards, copies of which can be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. The price is 15 cents.

#### BURNING PENNSYLVANIA HOMES

*Dwellings in State Valued at \$13,950,715 Destroyed by Fire in Five Years—Loss of Life Involved*

In view of the persistent shortage of housing facilities in Pennsylvania as in every other State, it is not a little alarming to learn from figures made public by the National Board of Fire Underwriters, through its Actuarial Bureau, that Pennsylvania burned, during the five-year period of 1917-1921, dwelling house property valued at \$13,950,715. This was only a portion of the total fire destruction in Pennsylvania; it represents a per capita dwelling fire loss for the State of \$1.59. At \$10,000 each, 1,395 comfortable homes could have been constructed with the money thus thrown away; and the scarcity of suitable housing accommodations in Pennsylvania materially relieved.

It appears further that the total loss in dwellings for the entire country, during this term, exceeded a quarter-billion dollars, standing at \$321,453,878. Chief among the originating causes cited by the Board as responsible for this unexampled destruction were "Defective Chimneys and Flues," "Sparks on Roofs" (usually wooden shingle), "Stoves, Furnaces, Boilers and Their Pipes," "Electricity" (misused), and "Matches-Smoking."

"Significantly enough," said W. E. Mallalieu, general manager of the National Board, in commenting upon the losses, "four of these five causes long since were pronounced by fire prevention engineers to be 'Strictly Preventable,' for sheer carelessness in some form is, of course, at the bottom of an overwhelming majority of all blazes in dwellings as in every other type of structure.

"More appalling by far than even the enormous financial loss, however, is the record of the thousands of fatalities involved—an utterly purposeless waste of life from which Pennsylvania, unfortunately, was not by any means free. Statistics are not available to show what proportion of the 15,000 deaths from fire—which in this country is the average yearly toll—occurred in residences, but fair estimate would place it well above 50%. That dwelling house fires are so frequently attended by loss of life—the victims usually being women and children—points clearly to the fact that fire prevention rightly begins at home. It cannot begin too soon.

"Fires are occurring in American homes at the rate of 359 in each twenty-four hour period—a fresh outbreak every four minutes. If, as so often has been stated, the home is the ultimate bulwark of American institutions, then there would seem to be a grave national menace in this continu-

ous assault by fire. Yet it is a danger that need not be suffered. It can be checked by the exercise of carefulness individual and public, for an average of three out of every four fires result from negligent habits or from ignorance of hazardous conditions."

#### HOW TO MAKE WATERTIGHT CONCRETE

Concrete made from properly selected aggregates, combined with portland cement in suitable proportions, when thoroughly mixed to the right consistency, carefully placed, and adequately protected during early hardening, will be watertight under all ordinary conditions.

Watertight concrete means good concrete. A few fundamental principles of good construction should be carefully observed. These can be summarized as follows:

1. All portions of the structure should be strong enough to resist the head of water, either internal or external, to which the concrete may be subjected.
2. Use clean, well graded aggregates.
3. Use a relatively rich mixture, a 1:2:3, or better 1:1½:3.
4. Use the minimum amount of mixing water that will give a workable, plastic consistency; not over 6 gallons per sack of cement.
5. Mix the concrete thoroughly, at least 1½ minutes per batch mixer.
6. Place the concrete carefully in layers 6 to 12 inches deep, spading or rodding it thoroughly to prevent the formation of stone pockets or voids.
7. If possible place the concrete in one continuous operation to avoid construction joints. If placing is interrupted, be sure to get a good bond between the fresh concrete and that placed previously.
8. Keep the concrete warm and damp for the first ten days.

In tests conducted by the U. S. Bureau of Standards, thin slabs of a lean (1:6) portland cement mortar and 1:1½:2 concrete were subjected to a water pressure of 60 pounds per square inch. This pressure is equivalent to a 138-foot head of water. Although water penetrated through 1⅝-inch limestone slabs in periods ranging from 20 seconds to 20 minutes, it took 3½ hours for water to penetrate through a two-inch slab of 1:6 mortar, while at the end of 24 hours, when the test was terminated, the two-inch slab of 1:1½:2 concrete was still dry.

Hundreds of concrete tanks are being used for the storage of fuel oil, which is lighter than water, and these tanks are oiltight, and of course watertight. Concrete basements, pits, bridges and tanks will also be watertight if proper care is taken in their construction. Experience and tests have shown that proper practice will make watertight concrete.

## No Matter What Kind of Construction, it Should Be Insured

Your building is always in danger of fire. When you have so much invested in inflammable material, why should you take a chance?

The cost is small. Your agent can arrange to increase the value of the policy as the building progresses. Ask him about a North America Builders' Risk Policy. He can get it for you.

## As The Editor Sees It

### HOW THE ARCHITECT PRODUCES HIS EFFECTS\*

BY DR. WARREN P. LAIRD

Dean School of Fine Arts, University of  
Pennsylvania

THE architect does not produce his effects through wastefulness, through excess, through prodigality or improvidence. He is aiming to produce something that will satisfy not alone scientific judgment, that will not simply bear strains and endure the asperities of time and weather, but he is trying to satisfy something that lies beyond that scientific judgment and that exists in the mind and heart of man—a love of the beautiful. He is trying to give something to the observer which will satisfy the intelligence in the first place and which will go beyond that and satisfy the craving for beauty.

Among the few things that we architects believe and teach is this proposition: that beauty is not to be had at mere money cost; that it is not always, and perhaps not often, necessary to go beyond the economic requirements of a building to make it beautiful. On the contrary, making a building beautiful is a question of good taste and good judgment in the employ of material; shown in the selection of materials that will harmonize in color; that have good tex-

\*An address before the Engineers' Club, Philadelphia.

ture and will please the eye by their surface character and by the selection of ornament that will be appropriate and well placed.

Under the severities of his training, the architect comes to learn that the process of making a thing beautiful is the process of simplifying it. I wish I could show you the process through which the student passes, in which we harrow his soul by requiring him to leave things out, whereas his instinct is to put things in to make his building beautiful. Ordinarily the simplest things are the most beautiful.

Sometimes there is a deliberate effort to make a thing sumptuous and rich and gay, but that is an essay in a certain kind of design. The result may not be satisfactory because it is a great deal more difficult to make a very extravagant thing beautiful than to give that quality to a simple thing.

The architect's great concern, then, in his work is design, or composition; that is to say, the arrangement of the parts into a whole. In designing his plan, he has in mind not merely the distribution of spaces into a convenient arrangement, or the nature of the structure which is to support the roofs and to separate those spaces, but also of something that he must carry along at the same time; he has in mind always the producing of something which will develop into a form of beauty.

It is one of the commonplaces in architecture, in the judgment of designs in architectural competitions—I think that is not commonly realized—that the jury will attach greater weight to plan than to elevation; and if there is a slight difference in merit between two plans, it would take an extraordinary badness in the elevation of the better of those designs, and an extraordinary beauty in the elevation of the second best design to give that second best plan the first place in the competition.

The best architectural jury will look first at the plan, to see whether it is going to produce the utility that will meet the purpose, and whether it is going to be economical in its construction or not. They feel a security in doing that because of the fact that a good plan will produce a good elevation in competent hands. Hence the architect's major responsibility and the thing that occupies most of his time and study is the problem of providing something practical, something that will satisfy economic requirements, and he can best produce a work of beauty out of those conditions.

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

## TO SURVEY SEASONAL OPERATION IN CONSTRUCTION INDUSTRIES

Savings, not only to the building industry and its workers, but to the public generally are expected to result from the activities of a committee on seasonal operation in construction industries, the appointment of which by Herbert Hoover, chairman of the President's Conference on Unemployment, has just been announced by the Department of Commerce. This saving should be reflected in lower relative cost of dwellings and other buildings. The members of the committee are:

Ernest T. Trigg, manufacturer, of Philadelphia, chairman; John W. Blodgett, manufacturer, of Grand Rapids, Mich.; John Donlin, President, Building Trades Dept., American Federation of Labor, Washington, D. C.; L. F. Epich, President, National Assn. of Real Estate Boards, Denver, Col.; A. P. Greensfelder, contractor, St. Louis, Mo.; John M. Gries, Department of Commerce, Washington, D. C.; Otto T. Mallery, public works expert, of Philadelphia, Pa.; Rudolph P. Miller, engineer, of New York; James P. Noonan, President, Brotherhood of Electrical Workers, Washington, D. C.; William Stanley Parker, architect, of Boston, Mass.; and Edward Eyre Hunt, secretary. Mr. Trigg, as chairman, has called a meeting of the committee for July 10 and 11 to lay out plans for a thorough study of the facts.

Previous surveys have indicated that most construction activity is concentrated in seven to ten months of the year, which means that building trades workers can not find work in their trade during several months, and that contractors' organizations and equipment, architects, engineers, building material producers, and others connected with construction, must usually remain idle for similar periods. This idle time represents waste, and direct losses to the construction industries themselves, their workers, and the public.

The committee was formed in the hope that by examining the facts and proposed remedies, it might be able to suggest sound solutions, and obtain general co-operation in effecting them. It is the general impression that seasonal building has been due perhaps more to custom than to weather, and it is expected that the investigation will throw light on this and other important points.

## WHAT IS GOOD FURNITURE?

"The first principle of a piece of good furniture," says Marian Moore, "is its successful performance of the duty for which it is intended. If it is a chair, it must be able to support the weight of a person, so that it can really serve as a

chair and not only as a decorative feature. If it is a table, it must be solid enough to hold the things one wishes to place upon it, whether it be a reading lamp or a frail little box of gorgeous coloring. Some pieces are intended for no other use than decorative purposes, and as such should really be decorative and not merely messy as to line and color.

"Good pieces never go out of style. Good pieces, whose line, design and excellent performance of duty have made them indispensable, have been in style for centuries and will remain in style through centuries to come as exemplified in the Windsor chair, the John Hancock desk, tip table and other Colonial furniture as well as adaptations of early English and French furniture.

"As the modes of living change, the ever-growing desire for comfort, beauty and convenience leads to improvements in furniture as in everything else. For example, overstuffed furniture has come into vogue with the increase of good wearing materials, both serviceable and beautiful and moderate in price; the day-enport bed was invented when living quarters became less spacious; reed furniture came into vogue when sunrooms became almost as numerous as homes, and there are many other recent innovations which make our modern homes more beautiful and comfortable."

—Keith's Home Building.

## BEAUTIFYING YOUR GROUNDS

Where there is little room around a house, vines count for more than they do on a larger place. Vines are not used anywhere to the extent they should be. If the house is of frame construction, a stout wire can be fastened where a vine is wanted, or, better still, a light trellis made of two-inch by one-inch slats. Such slats generally look better if the strips run only vertically and horizontally without any special pattern, though this is not always so. On stucco houses in many states there is one vine which can be used without wire or trellis. It is a self-climber. This is Engelman's Woodbine or Ampelopsis Engelman.

In the treatment of the small home yard, a narrow walk is better than a wider one. A direct walk is better than one which wanders over the lot. If the distance from the street is short and no trees or bush come in the way, it is sensible to make a walk straight.

—The Small Home.

# Cantonments to Go!

*Buildings together with Fixtures  
to be offered by Auction*

Camp Dix, N. J., August 17th

Fort Humphreys, Va., August 24th

Camp Meade, Md., August 28th

Building and wrecking contractors, plumbing, heating and electrical contractors, faced today by high wages and exorbitant building material costs, can broaden their margin of profits by participating in the dismantling of these three important Army Cantonments.

These properties, which are to be offered for sale by Auction on different dates, consist of a total of 2,204 miscellaneous temporary structures which will yield approximately 39,127,142 feet BM lumber; more than 4,000 radiators of various sizes; 123,485 lin. feet of piping,  $\frac{3}{8}$  to 4 inch; over 2,000 toilet bowls and tanks; 600 odd sinks of various kinds; 589,107 feet of various gauge electric wire and hundreds of heaters, ranges, hot water tanks, etc.

A catalog has been prepared on each Auction, and all of them may be secured by writing to the Q. M. General, Room 2026 Munitions Building, Washington, D. C., or the three official auctioneers conducting these sales. The Camp Dix Auction is to be conducted by Gordon & Williams, 432 Fine Arts Building, Detroit, Mich.; the Fort Humphreys sale by John J. Erwin, 582 Newark Street, Jersey City, N. J.; the Camp Meade Auction by Bryan L. Kennelly, 149 Broadway, New York City.

The boxes on the opposite page list the major items at each cantonment.

*Specifications of sales may be obtained by writing the Quartermaster  
at respective cantonment.*

*The Government reserves the right to reject any or all bids.*

# ARTMENT

Board of Lancaster, H. J. Newell, Administration Building, Prince and Chestnut streets, Lancaster, Pa. *Founded 1792*

## No Matter What Kind of Construction, it Should Be Insured

Your building is always in danger of fire. When you have so much invested in inflammable material, why should you take a chance?

The cost is small. Your agent can arrange to increase the value of the policy as the building progresses. Ask him about a North America Builders' Risk Policy. He can get it for you.

## As The Editor Sees It

### HOW PAINT AFFECTS INTERIOR ILLUMINATION

By SAMUEL G. HIBBEN, *Illuminating  
Engineer*

Very few people are fully aware of the surprising influence that colors, densities and surface finishes of paint may have upon both the quality and amount of artificial or even natural indoor illumination. In fact, it has been only within the past year or two that careful study has been undertaken along this line, and we can fully expect that architects and engineers will continue to take more and more interest in the subject, as we gain in knowledge of eye comfort, economics of night lighting, and costs of maintenance of lighting systems and interior surfaces.

A few months ago an engineer made up two gray shades, using different tinting colors in producing them. Then the two grays were coated upon wood and metal, and samples when dried tested for their light reflecting properties. Even though the color match was perfect, yet one of the paints invariably absorbed more light than did the other. The obvious conclusion was that most all ingredients in paint have a decided influence upon their efficiency as light reflectors, and that colors or tints alone are not the sole criteria of illuminating efficiency.

Further studies have been made that

lead to other interesting and valuable conclusions, but in order to better understand the inter-action of light and interior surface coatings, the following points should be kept in mind.

Light, such as from an electric lamp, penetrates further into some surface films than in others. If light reflects from a dense surface, or as it would do from a highly glazed paint, it would naturally remain unchanged in color. This action may be seen by reflecting a ray of white light from a sheet of red glass, and observing that the reflected ray still remains uncolored, i. e., white. But if the light penetrates somewhat into the surface, it will be redirected back with a change in color, just as the ray of white light which passes through the sheet of red glass will emerge red. The ordinary mixture of ochre and oil applied to a tin roof will illustrate this coloring action of the painted surface upon light, because here the diffusely reflected light of the sun will be decidedly pink.

The commercial application of this fact is full of possibilities. If a merchant desired to secure artificial illumination in a store which would approach or approximate daylight in color-quality, he might use the daylight blue Mazda lamps in the lighting units, but might absolutely counter-act the color correcting action of the blue glass of the lamps or the enclosing globes by using a yellow or red shade of interior paint. Conversely, in

a residence room, most people, particularly the feminine folk, prefer a warm, cozy atmosphere, and the original while light of either day or night illuminants can be made slightly golden or less harsh and cold by carefully selecting ceiling and wall colors of rich cream, old ivory, or tan.

No good paint salesman would allow a jeweler to use gray or green colors in a room where pearls were sold; neither would he recommend yellow or red walls to surround display of cut-glass, silverware or diamonds. If an office in a modern city skyscraper had a northern or north sky exposure, it usually should be finished in cream rather than gray or greenish colors. If rooms face the south, and have a large amount of direct sunlight, the dictates of eye-comfort say use light grayish-green colors on walls.

Some of the greatest mistakes in painting are those which arise through a misunderstanding of the laws of light reflection. One very favorite and wrongly used expression, when speaking of reflected light is that "the angle of reflection equals the angle of incidence." Every one should carefully note that this law holds true for only the surfaces, like mirrors, polished metal, or modified conditions, like a highly polished and varnished surface. The actual fact is that when light is reflected from a matt, stippled or depolished surface it will be spread out much, and the majority of it will be redirected back

**DRAWING  
MATERIALS**

Philadelphia  
KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

normal or perpendicular to the painted surface regardless of the direction from which it originally came. For this reason it is of no benefit to have glossy finishes of painted surfaces in fact, the amount of light reflected therefrom is usually no greater than that reflected from a matt surface, and shiny surface finishes create bright images of light sources, hence augment glare.

Paint colors have a tremendous effect upon the quantity of usable illumination. In smaller roomers this effect is so great that one may well emphasize it repeatedly.

Suppose we have two small rooms, one finished in a dirty yellow color that has a reflecting value, or co-efficient of 70 per cent.; the other finished in medium cream color with a co-efficient of 80 per cent. The direct light on the table in the first room would be increased (by virtue of multiple interior reflections) by 3.3. The increase in the second room would be 5.0. If a 150-watt Mazda lamp furnished sufficient illumination in the first room, then a 100-watt lamp would furnish about the same illumination in the second.

The cost of painting with a good cream color would be no greater than applying the darker yellow, yet in the darker interior the cost for lighting power to produce the same illumination would be 50 per cent. greater.

It will at once occur to any thoughtful person that it may pay to refinish a dingy or dirty interior, because thereby the useful illumination can be so greatly increased, or the lighting costs so greatly reduced. Savings in electric power usually can more than offset costs for painting.

Painting for light is a very vital subject. The proper cleaning of painted surfaces is likewise important, but that will be sufficiently interesting in itself to form another article.

—Paton's Monthly.

### TESTS POINT WAY TO SAFER ELEVATORS

*Seventy-five Per Cent. of Fatal Accidents Preventable United States Bureau Finds*

About three-fourths of all fatal elevator accidents are found to occur at the hoistway door, either because of the door being opened when the elevator is not there or because of the elevator starting when the door is open. These accidents can be prevented by a reliable interlock, as when such a device is used the elevator must be stopped at the floor before the door can be opened and the door must be closed before the car can be started again.

During the past year the Bureau of

Standards has been conducting tests to determine the reliability of the various types now on the market. The devices have been given endurance tests under normal conditions, they have been tested in a corrosive atmosphere, in a dust laden atmosphere, without lubricator, and under conditions of misalignment likely to occur in practice.

The tests were conducted at the request of the City of Baltimore, and will permit city governments to base their approval of such devices on actual performance tests instead of on visual inspection alone. The results have also been made available to the manufacturers of the devices tested, and in most cases they have improved their designs in accordance with the suggestions offered.

### QUICK-SETTING LIME BLOCKS DEVELOPED BY BUREAU OF STANDARDS

A cast lime building tile for use in making partitions has been developed at the Bureau of Standards by the Fellow of the National Lime Association. The material of which it is made sets so that it can be removed from the mold at the end of ten minutes. After twenty minutes it can be handled, and after seven days it has a compressive strength of one hundred pounds per square inch. It can be sawed, and nails can be driven into it.

The material is composed of five parts by volume of ground quick lime, ten of hydrate or slaked lime, and one of wood fiber. It is found to cure best when outdoors exposed to the weather. The new tile is about twenty per cent. heavier than gypsum tile of the same size, and experiments are being conducted to see if the core volume can be increased without too great a sacrifice of strength.

The quick setting lime of which the tile is made was developed several months ago by the Bureau of Standards, and can also be used for other purposes. Difficulty is found in shipping it, however.

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

The impractical dreamers are not the architects, but the clients themselves, as a rule.

## A NEW HOTEL IN YOUR TOWN

### III. Selecting the Site

*The third in a series of articles that show step by step, the phases through which the new hotel project in a medium size city should pass before it becomes a successful reality.*

BY W. L. STODDART

Architect

Reprinted Through the Courtesy of  
"Hotel Management"

LAST month we discussed the factors that should be considered in determining the number of bedrooms that can be incorporated in a new hotel in order to best meet the requirements of the particular city for which such a building is being considered. When once this question has been settled the next logical step toward inaugurating the new hotel is the selection of its site.

If it were possible to draw comparisons between the relative importance of the various phases that enter into the creation of a new hotel building, I would put the choosing of the proper site at the head of the list. It is possible, and frequently happens, that an undersized hotel or a hotel that has been extravagantly built or incorrectly planned, will show a profit as long as it has been centrally located in the town. Such hotels will not, of course, return the interest earnings on the investment they should but, nevertheless, many examples of both of these cases have come to my attention and I have even known of hotels that were too large for the communities in which they are situated that have "gotten by." On the other hand, more hotel failures can, in my opinion, be attributed to locations unadapted both to hotel and business requirements than to any other one cause.

One of the first points to be considered in selecting the new hotel's location is to choose one that is of the correct size and shape to allow for proper planning and that is also adaptable for future additions. In this connection, please recall the axiom mentioned in my last article—namely, that it is best to be conservative at the start as to the number of rooms to build. At the same time provision should be made for a future wing of typical

floor rooms to meet the volume of business as the growth of the city requires. Remember, too, in this connection that in most cities the building laws do not permit the erection of structures of more than a certain number of stories—12 in many cases. As a general proposition, also bear in mind the fact that it is more economical to build upward than outward. It has frequently happened, however, that hotels have been built as high as they could be under existing laws and have still needed room for expansion, but due to the fact that foresight had not been used when the property was originally purchased and the hotel planned, unnecessary expenses—oftentimes not warranted by the returns on the investment—have been forced on the lessees and owners because of their lack of judgment or experience.

This should not be taken to mean that it is necessary to purchase more ground space than the hotel will need at the start, but it does mean that sufficient ground should be purchased and the building then so planned that future extension may be made at the minimum of expense when required—or the promoters should be careful to see to it that the property adjoining the hotel's site will be available at a reasonable figure later on.

### Who To Consult in Choosing the Site

There are in general four people whose judgment is particularly valuable when it comes to selecting the site for the new hotel. The first of these is the prospective lessee. If he is an experienced hotel man (as he, of course, should be) he will be in a better position than any one else to gauge the possibilities, from a business-getting standpoint, of the various sites under consideration. The architect with experience in the building of hotels should be the next man to be consulted in this connection. With his highly developed judgment, both from an artistic and practical point of view, he should be in a position to advise as to which of the various sites will prove the most profitable from a business point of view and the most practical as to planning and design.

One or more of the city's leading retail merchants should also be consulted. After all, a hotel offers a commodity for sale just as does a retail store. In most cases the men in this line are best posted on the trend of the city's business and future growth and know the best location for attracting the largest possible patronage. Another important group of men whose judgment is well worth securing is that of the officials of the chamber of commerce and other civic or business associations of a like character. If they are "on their toes," it is probable that they have kept in close touch with the trend and character of the

city's development and can furnish valuable pointers as to where the hotels should be located so as to take the utmost advantage of future growth and harmonize with other plans that they have fostered for the development of the municipality.

A word of warning as to one, unfortunately, too common mistake to be guarded against in selecting the site of the new hotel. This is the question of individual or selfish interests as opposed to the general interest of the entire community. It goes without saying that the community's best interests are the only ones that should be considered in the carrying out of a hotel project. New hotels increase surrounding property values more quickly than any other type of building, and when it comes to selecting the site, the board of directors will probably have a number of proposals suggested to them which will be made to look particularly attractive because of the ulterior purposes in the minds of their promoters—but the judgment of the experienced hotel operator and the business man, who have only the city's best interests in mind, should be given first consideration and should outweigh all other arguments.

The above are the more general factors that should be taken into consideration in choosing the site for the new hotel. The following points are more specific, but all are of equal importance insofar as the returns to the management for its efforts and to the stockholders for their investment are concerned.

I wish first to make it clear that this discussion is confined to hotels which will be primarily commercial or civic in character, although the points apply in a general way to all hotels. They are, however, particularly applicable to commercial establishments, and because of the fact that the commercial or civic hotel is the backbone of the hotel industry in this country, and in order to be more specific, I am limiting this discussion to hotels of this kind.

#### *The Specific Points to Consider*

In the first place, the new hotel must be *accessible*—accessible with regard to railroad stations, street car lines, the main automobile highway the town's business district and its residential section. It should be built at or near the center of converging business and residential thoroughfares. These factors are all of the utmost importance, and while it is improbable that every one of them can be fulfilled in an one city, when taken together they constitute the ideal that should be kept in mind when the various sites are being considered.

If the hotel's site is properly selected with reference to the above factors, the question of *revenue from sub-rentals*

will automatically take care of itself. In a previous article of this series I stated an axiom to the effect that the income from sub-rentals should at least equal the interest on 25% of the cost of the building. Another way of stating this axiom in approximate terms is to figure that the income from sub-rentals should equal the taxes and interest charges on the property—or, if the property is leased, the annual rental charge. If this procedure is followed it will be seen that the cost of the site selected is of secondary importance. The *best* site should be selected regardless of cost and the hotel's income from sub-rentals automatically adjusted to carry the cost of the property.

I said above that a site should be selected which would adequately provide for later expansion. In any case the size of the property should be ample to take care of all ground floor and main public room requirements and allow for guest room expansion over the service or kitchen wing of the hotel. This does not mean an unbalanced investment, as the ground floor rentals and economy of future construction more than offset the temporary additional capital investment. In this connection let me add that in entering into a lease with an operator, it is possible to make an arrangement whereby the latter will agree to pay an increased net return on the investment after the additional guest rooms have been built. This question of lease will be discussed more fully in a later article.

I also stated that when a new hotel is opened to the public the value of the surrounding property increases very rapidly. As a matter of fact, this question of increased property values should be regarded from both viewpoints—namely, from that of the new hotel and from that of the other adjacent property. I mean by this that the neighborhood in which the new hotel is built should be one where property values are on the increase, and if the factors mentioned above are followed, this will automatically be the case.

#### *The Best Location*

The best location for the new hotel is one that is conveniently close to, or even directly on the line of growth of the city's retail business and at the same time on the main street leading out toward the residential center. In my opinion, it is usually better to build the new hotel on a site that is slightly beyond the present retail center—in the direction of the best residential district—rather than directly in it. For in every case the retail center follows the trend in residential building, and it is, of course, better to let the business district catch up to the new hotel than to leave it behind.

In connection with the above discussion, the new hotel, which is now being

planned for Tacoma, Wash., provides an interesting and complete example, in that the selection of its site illustrates all of the above mentioned points. In all, eighteen different sites were submitted to the hotel's board of trustees and in their report to the stockholders all of these sites were illustrated and the stockholders asked to vote for their first choice. The following are some comments which will illustrate the advantages and disadvantages of the three best sites submitted:

*Site No. 1—9th Street—between Broadway and Commerce Street.* This, in my opinion, was the best of the sites considered and I am glad to say that it was the one finally selected. Tacoma's retail district converges at the intersection of South 9th Street with St. Helen's Ave. and Broadway, and the best residential section is reached via Broadway and St. Helen's Ave. This site, therefore, fulfills practically all of the specifications mentioned above. Both Broadway and St. Helen's Avenue are main thoroughfares, there is plenty of parking space for automobiles on the Broadway and Commerce Street frontages and few possibilities for congested traffic.

Moreover, the size of the property—100 feet on South 9th Street, and 200 on Broadway and Commerce Street—provides ample frontage for the main public rooms. At the same time the entire ground floor space below these main rooms is given over to stores—a total of over 24 rentable spaces. A final point in its favor is the fact that the north or inside property lines provides for a later addition of 125 rooms, should the volume of business warrant.

*Site No. 2—Corner of Pacific Avenue and South 10th Street.* This is also a desirable location for the reason that it is well centered in the city's lower business section and because it gives ample space for the erection of a hotel of the size that Tacoma needs. The plot is also well proportioned for the designing of a modern and artistic hotel building, and there is sufficient space for a future wing at the rear of the property. The ground floor rentals would also be high in this location. But because of the value of the ground floor space on Pacific Avenue, it would be necessary to place the main lobby and other public rooms at a distance of about 11 feet above the sidewalk level, and without the opportunity of having the main entrance lead directly into them. Furthermore, this site is situated too far distant from the best residential section, and the trend of business would be away from it rather than toward it.

*Site No. 3—Corner of Broadway and South 9th Street.* While this site has the same advantages of location that were set forth regarding Site No. 1, the shape and size of the property would not per-

mit of an adequate hotel building for Tacoma's needs. The lobby and lounge would be cramped unless they were placed along the Broadway side of the building toward South 10th Street, and in this event it would be necessary to locate the service end of the structure on the South 9th Street corner—the most desirable and conspicuous part of the property. In order to secure the necessary number of bedrooms on this site it would be necessary to build at least 12 stories and with a hotel of this height, the columns in the lower public rooms would, in my opinion, be objectionable because of their size. (This statement is made on the assumption that reinforced concrete would be used. If a structural steel frame had been decided on, the cost to the new hotel would have been materially increased.)

\* \* \* \* \*

The above examples illustrate the many intricate and varied factors that enter into the problem of selecting the best location for the new hotel. This is no easy problem to decide, nor is it one that can be settled off-hand. But if the board of directors, in consultation with the prospective lessee, the experienced hotel architect and the civic bodies, will carefully weigh the above pros and cons, and make an unbiased decision in the light of all the "evidence," they can be assured of building their hotel where it will enjoy maximum patronage and bring a remunerative return on the entire investment both to the lessee and the stockholders.

The next installment in this series will take up the cost and financing considerations.

#### FINDS ALUMINUM PAINT MAKES RADIATORS LESS EFFICIENT

The aluminum or bronze paint generally applied to radiators greatly reduces their effectiveness and makes it necessary to have a larger surface for the same heating effect, according to experiments performed by Dr. W. W. Coblentz, of the Bureau of Standards. Dr. Coblentz finds that the heat radiated from an aluminum painted radiator surface is less than a third of that emitted by a radiator of the same size painted with a non-metallic paint, enameled, or simply allowed to rust.

On the other hand he finds that aluminum paint is a very effective means of reducing the amount of heat transmitted through a thin material. Applied to the under side of a tent or awning it reduces by three-fourths the amount of heat from the sun which gets through the cloth, while it used on the cover of an automobile or ice wagon it cuts in half the heat let through and makes the temperature inside the vehicle more nearly

that found in natural shade, thereby making it much more comfortable.

#### DOVE DAMPERS FOR THE FIREPLACE

A properly designed throat damper affords the means of regulating the fire. The damper consists of a cast iron frame with a lid hinged so that the width of the throat opening may be varied according to size of fire. There are a number of patterns on the market, some of which are designed to support the masonry over the fireplace opening.

Regulating the opening according to the kind of fire prevents waste of heat up the chimney. Closing the damper in summer keeps flies, mosquitoes and other insects from entering the house by way of the chimney. In houses heated by furnaces or other modern systems, fireplaces without throat damper interfere with even heating, particularly in very cold weather.

An open fire must be supplied with air and the larger the fire the greater quantity required; an extra wide fireplace may pull air from distant parts of the house. This air heated by the expenditure of fuel in the furnace is carried up the chimney and wasted. With a throat damper open only slightly a slow fire can be kept going without smoking the room, reducing materially the waste of heat.

The throat damper should be as wide as the fireplace so the side walls should not be drawn in until the throat is passed. The placing of the damper varies with the type, but generally the bottom of the frame is built into the brickwork at the level of the top of the fireplace opening forming the throat and supporting the masonry above it.

The use of dome dampers became necessary on account of smoky fireplaces, and before the introduction of these dampers, the individual workman used his own judgment as to the opening of the chimney throat, and likewise its size when entering the chimney proper, and resulted in the direct cause as to why a fireplace would dawn in one chimney and not in another.

A perfect dome damper regulates the opening of the throat at the top of the fireplace, the height of the throat the slant given the throat and the size of the opening of the throat into the chimney leaves a smooth lining to the throat, is the shape of and covers the full size of the fireplace, insuring a perfect draft.

It should be simple in construction, free from complicated mechanism and of sufficient weight to bear handling and transportation. The size of the base opening of these dampers should be in accordance with regular fireplace openings, and to obtain the best results the

damper should have a base opening as near the size of the fireplace as possible.

Every fireplace no matter how large or small the house, should have a damper. A fireplace dome damper is not a luxury but an absolute necessity. The first cost is the only cost. But in reality there is no cost, for in one season of cold weather a dome damper pays for itself in fuel saved.

This saving is not alone in the fireplace, but the major saving is in the furnace or heater. Heat which stays in your rooms instead of being sucked out through the fireplace flue faster than the firebox can be filled with fresh fuel.

Another point to be considered is that no arch bar is needed, that the chimney throat can't go wrong and the time required to lay up a throat is entirely saved. It is reasonable to believe in using a dome damper there is an actual saving which should not be overlooked by a builder.

Some dome dampers now in use have attachments whereby the door can be opened from the face of the fireplace. One of the most popular has a square rod running through the tile or brick facing encased in a brass tube so the operation is free and easy. The rod being operated by a brass handle and the rod in turn operates a cam which it attached to the door.

It requires but a three-quarters turn of handle to open or close the door, and handle will always indicate position of door. It is so constructed that the door automatically locks itself at any desired opening while operating the handle.

The mechanism is exposed inside the dome so as to be able to adjust the damper rod to proper position after face of fireplace is completed. The door can be removed or replaced at will without removing any screws or works, permitting free access to the flue while building or when cleaning. This attachment is simplicity itself, and a screw driver is the only tool necessary to attach it to the body of damper.

The only road to advancement is to do your work so well that you are always ahead of the demands of your position. Our employers do not decide whether we shall stay where we are or go on and up; we decide that matter ourselves. Success or failure is not chosen for us: we choose them for ourselves.—H. W. Mabie.

Repetition tends to create habit, the more often we see, do or hear a thing, the quicker we are likely to be influenced by it. The consecutive appeal of a number of advertisements will develop certain memories and associations tending to overcome the natural habit of procrastination.—Making advertising pay.

President, Associated General Contractors  
of America

TO either the individual citizen who works with his hands or the individual who employs labor, the question of immigration at first glance appears extremely simple. The self-interest of one dictates that no more workmen shall enter the country to increase the competition for employment and reduce the scale of wages, while the self-interest of the other demands that additional labor shall be brought into the country to increase competition for employment and lower the cost of production. Between these two views is a distinct conflict of interest that in earlier years might have been settled by the test of might, but which today must be settled with due regard for the welfare of the country as a whole. The rank and file of citizens commonly designated as the public, has acquired an impertinent habit of demanding a voice in matters which affect its interest and thus the settlement of the immigration question becomes a little more complex.

The question is far from simple, and those who have given it the deepest study

President, John W. Cowper Company,  
Buffalo, N. Y.

find it even less simple than those who have spoken with little knowledge. Practically every action that has been demanded by either labor or employer is involved with complications, either in this country or abroad, which have placed a difficult problem before the country's legislators. It appears highly improbable that these gentlemen will be stampeded into taking precipitous action one way or the other, and it is now up to each group of proponents or opponents of this or that immigration policy to show the reason for their respective stand.

### Most Benefit to Greatest Number

Few employers are so shortsighted as to favor a return of unrestricted immigration which would open the gates to a flood of undesirable aliens, yet it is doubtful if a decision based solely upon the opinion of employers would bring in that number only which is best for the country as a whole; likewise, it is doubtful whether the restriction that labor desires to see established would be that which could serve the best interest of the majority of citizens. It appears only sensible, therefore, that the question of immigration should be handled in a scientific manner under the guidance of long range vision and under the policy of the most benefit to the greatest number. In fact, this principle of handling the immigration question is that most commonly advocated, and there is no logical objection to its theory, but a real difficulty, in

fact, a great many real difficulties have obstructed the formulation of a practical working plan.

Practically every trade association of the country has been giving the immigration question study, many of them in co-operation with the Department of Labor and different legislators who are seeking an answer to the question. So far, the answer has not been found, nevertheless, there are certain facts and fundamental principles that must finally govern the issue.

In the first place, we know that certain industries are undergoing a shortage of labor, which has reduced the volume of production and has enabled certain industries to indulge in the pleasant pastime of what we designate as "profiteering." Until those industries get more labor, it is highly probable that the general public will get less for its money.

### Have We Enough Workers?

The statement has been made by various men of intelligence, as well as by many of little knowledge, that there are at present enough people in the United States to perform all necessary work, and they would probably be right if the seasonal and cyclical movements of industry could be wiped out, but the fact remains that native Americans decline with increasing disdain to wield a pick and shovel, and there is little doubt in anyone's mind that these implements must be wielded or industry will cease.

Therefore, since the clerical class does not care to work with its hands, even at higher pay, the only answer appears to lie in additional immigration.

What industry in general, and construction in particular, needs most of all is diggers, shovelers, lifters, pushers and grunTERS to do the work that Americans will not do. All educational methods are producing clericals and intellectuals at sufficient speed, and certainly we must have the brawn and muscle to support them.

The present 3 percent. limitation of the immigration law, which was enacted to stop a threatened flood of immigration after the war, has actually reduced the alien workers of the country. Emigration has exceeded immigration, and this in the face of an enormous industrial expansion. That the country should not suffer a loss in its number of workmen is generally conceded, and the necessity for a change in the present law has become so apparent that a new law will undoubtedly be enacted by the next Congress. This fact is well known by labor, and it is already busy. It is important, therefore, that employers take care to point out their side of the immigration question.

It is not likely that any group could stampede through an immigration law even if it so desired, but it is essential that information bearing on all angles of the question should be placed before the legislators. The course of events at Washington during the past two years leads one to believe that legislation in that city moves somewhat in the manner of molasses on a level sidewalk and constant attention is necessary to keep it from spreading in all directions.

#### *A Selective and Elastic Law Necessary*

The new law, whatever its details, should be selective and elastic in its operations, a policy which depends upon successful administration for its effectiveness and it is probable that such administration can only be carried out through some sort of an immigration board.

Such a board by co-operation with the Departments of Commerce, Labor and Agriculture and commercial agencies, could obtain accurate information concerning the supply and demand of labor in any section of the country. This board should be invested with a power to raise or lower the number of aliens to be admitted, or even to prohibit immigration entirely if economic conditions and the welfare of the country warrant. It is through the medium of some such scientific board that we may hope to maintain a balance between the supply and demand for labor which is the real point of the controversy over immigration. The essential action is to determine by rational and scientific means when this balance is established.—*The Constructor*.

Wider use of metal window sash and frames is foreseen as a result of a series of scientific tests to determine the best window for the modern office building. After an extensive investigation the new \$15,000,000 thirty-two story Michigan Avenue skyscraper, the future home of S. W. Straus & Co., in Chicago, will be equipped throughout with metal windows.

The installation with metal instead of wood is in line with the effort of the Strauss organization to provide the new structure with every facility for efficient construction and economy of operation.

The tests have determined that through the use of metal windows, 3.6 square feet of glass can be added to each window, thereby increasing the amount of daylight throughout the building. As each typical suite would have two outside windows, the amount of additional glass for the admission of daylight will be more than 7 square feet for each typical suite.

In light of the investigation it was found that the metal windows are more attractive, easier to operate and in fact productive of 10 per cent. more daylight than the older type of wood window construction.

#### ALL BUILDINGS A MATTER OF PUBLIC CONCERN

Mr. W. H. Tusler, a Minneapolis architect, and chairman of the publicity committee of the Minneapolis chapter, American Institute of Architects, recently gave expression to the following, anent public concern in good architecture:

"Every building that is constructed is a public matter and as all buildings are seen, society has a right to demand that none be ugly.

"The building department of any city requires that no buildings be unsafe or dangerous to health; economy requires that they be not wasteful of space or ill suited to the purpose for which they are created. The investor realizes a well designed building is a better investment and a well constructed building is a more economical investment.

"All building undertakings are better, more valuable, if they are beautiful. Bad planning, waste space, poor means of circulation, fire hazards, usually result in loss of income, higher percentages of taxes to income and increased insurance rates.

"The average client is unequipped to design or direct the construction of his building. His attempt to do so is as certain to court disaster as would be his untrained efforts to supplant his physician for his own cure.

"The practice of architecture requires business executive ability of a high order. Inasmuch as the owner's financial

(Continued from Page 516)

interests are deeply involved in the architect's action, the integrity of the latter must be above question. The development of a well equipped architect demands long and careful study and preparation."—*Architect and Engineer*.

#### SMALLER HOUSES AND INCREASED CONVENIENCE AIM OF MODERN ARCHITECTS

Love in a cottage was once considered the highest form of newly wedded bliss. The young matron with a small house all her own was monarch of all she surveyed and was taken as a fitting representative of the feminine side of American life. She was traveling in the steps of her mother, grandmother and frequently her great-grandmother.

The growth of cities and the consequent high prices demanded for building sites, even in comparatively small cities, have wrought a change in a great many features of American life. Housing is one of them. The bride of today, if her house is in a growing city, more often than not, now goes to housekeeping in an "apartment." This "apartment" may be anything from two or three rooms up to a half a dozen. The old type of kitchen gives place to a kitchenette not much larger than a good sized clothes closet in a house of by-gone years.

The old time American house, usually built of wood, with agreeable surroundings, was usually a building of rather generous dimensions. What it lacked in

conveniences it made up in size. It has a huge kitchen, one or more big porches, frequently a lawn adorned with more or less shrubbery and a few trees, and nearly always a generous kitchen garden in the rear. Such an establishment was deemed a fitting representative of the independence and comfort of American life. "Flats" belonged almost exclusively, in this country to New York, and flat dwellers were regarded with a certain amount of pity more or less kin to contempt.

Life in a "flat" was thought to be not much better than life in a tenement. It was supposed to represent crowded and unwholesome conditions and to smack of the over-crowding of European cities.

Growing industry, expanding commerce, increasing population in cities and advancing prices in real estate have changed all this. Apartment houses, two-family houses, terraces and other forms of dwellings designed to save space and increase revenue, have almost engulfed the old One-family house, denuded its setting of shade trees and shrubbery, shorn it of its kitchen garden and obliterated its lawn.

A great deal of the building ingenuity of the present day is naturally expended on such structures. Builders are recognizing, as a matter of course, that houses designed to accommodate two or more families must be equipped with conveniences and appliances for saving labor and insuring comfort. They are also recognizing the present-day demand for cozy quarters—that is, for rooms far smaller than those of the old single-family house type.

As an outcome of this demand bed rooms are no longer 24x24 feet in dimension, but are more often 10x12 feet. Bedrooms of these dimensions are accepted today as filling every requirement of modest comfort and great convenience. Bed rooms even as small as 9x11 feet are considered adequate for one or two persons.

Old fashioned parlors and drawing rooms have gone the way of hoop-skirts and stove-pipe hats. They are reminiscences of the past. The present day living room, about 16x24 feet in size is regarded as having generous dimensions and sufficiently large for the average family.

Relatively small rooms and compact arrangements have made it necessary for the builder of today to be alive to the distribution of doors and windows. Housewives are careful to note whether rooms "furnish well" or whether that air of cosiness so much desired in small quarters is missing.

The window or windows and doors in each of the bed rooms must be placed so that they do not interfere with the arrangement of furniture. This is also true of the family living room and the small dining room. Architects are therefore finding it highly necessary to make a study of each room finished and furnished before completing his plans. In the old type of house space was usually so generous that, if doors, windows and closets were not happily placed, there was nevertheless sufficient room available for placing furniture to good advantage without seriously interfering with avenues of ingress or egress.

Arranging doors, windows and closets so that the bed must be placed with its foot directly opposite a window is not in accordance with the desire of the housewife of the present day. Such an arrangement means that the sleeper on awakening is greeted by the glare from a window or a draught of cold air blowing directly on the face.

The woman of today also is far from being satisfied with a living room in which the windows or doors are so placed as to make it difficult to place a davenport or other large piece of furniture which taste or convenience dictates should have a place in the furnishings of a room. The dining room though small must lend

# Unified Equipment Built for the Small Kitchen

Range, refrigerator and cabinet units with the sink arranged on one wall

By J. L. WIENER, Architect

*Vice-President, Cabranette Corporation of Chicago*

*The modern woman demands an efficient kitchen—a kitchen in which conservation of time and effort is the keynote. The architect must meet her demands in kitchen design. The author of this article, who is a deep student of home design points out the reason why.*

Range and broom closet units on one wall with refrigerator unit and sink on opposite

**"R**UNNING a home is running a business!"

Whether or not we believe that statement, we must recognize that it is the modern woman's idea and that she will select a home or an apartment that seems to offer the best facilities for the business of housewifery.

When a woman considers buying or renting a home, she looks first at the kitchen. In reality it is her "workshop" where her most productive effort is put forth.

To a woman's mind, the kitchen offers possibilities for creative work—the pleasure of "making something" which offsets the more or less humdrum labor which other parts of the house demand.

But just as the workshop equipment of 50 years ago has become obsolete, so is the kitchen equipment of a generation ago not suited to modern conditions.

The modern woman demands a modern kitchen. Let us for a moment consider why.

The last hundred years have witnessed the appearance and development of several factors which have vitally affected home management.

The growth of large cities, with the resultant concentration of population in limited areas, has increased rents and caused the development of apartment houses which are, of course, nothing more than co-operative homes where the rent is pro-rated among the tenants.

Dust and dirt-creating agencies have been concentrated in and around the centers of population, and this has increased the time and effort required for washing and dusting in the home, particularly in the kitchen.

The domestic labor supply has de-

modern woman is the greatest factor in bringing about a modernization of the home equipment.

Then, too, the increase in food and fuel values has made necessary drastic economies in the kitchen. These economies are accomplished by the employment of

mechanical devices for cooking, washing and cleaning, thus eliminating domestic help, which must be housed and fed.

The question of woman's health is more pressing than it was when outdoor occupation helped to maintain her vitality. Today she must conserve her energies for the sake of herself and her family.

This brief review of the economic and social changes which have affected home operation, shows clearly the reason for the need for a modernization of the kitchen.

According to domestic economists, the ideal kitchen to meet modern needs must be well light-

ed and ventilated. The equipment, which must include the stove, the ice box, the sink, the kitchen cabinet, chairs, and perhaps a table, if space permits, must all be so placed as to decrease the effort necessary for their combined utilization, and must be composed of easily-cleaned materials which will resist wear and corrosion.

The preparation of food must be accomplished quickly and efficiently, and the business of cleaning must be done with a minimum of effort.

Because of these reasons the semi-

This is the kitchen in the home of John Howard Payne, who wrote "Home, Sweet Home," one hundred years ago—a typical kitchen of our great-grandmother's time

creased, while compensation for domestic service has gone up several hundred per cent. This condition has made it necessary for the woman to perform herself many of the unpleasant tasks that were once done by cheap labor.

The modern woman takes an active part in business and public affairs. Many women aid their husbands or sons and daughters in commercial work. This tendency demands that less time shall be spent in the maintenance of the home without a lessening of its efficient operation. Perhaps this dual capacity of the

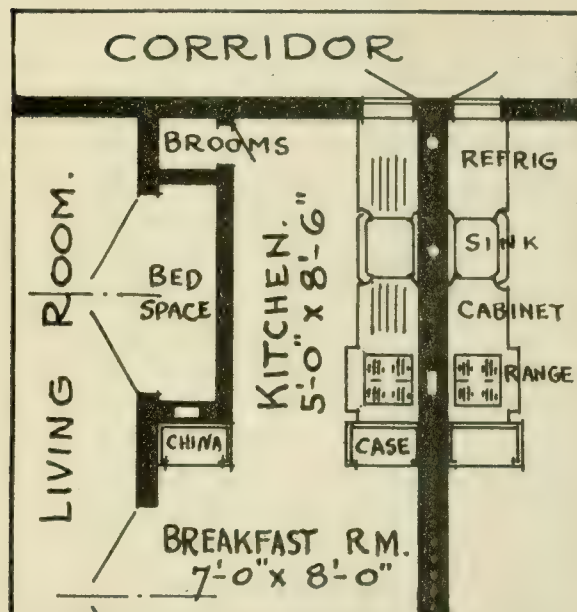

Range, broom closet and large refrigerator units, with additional storage space above

furnished apartment in which the kitchen equipment is built-in for the tenant's use, has of recent years become much in demand.

In order to meet this demand, and the other requirements in modern kitchen arrangement, architects are designing special equipment for apartment use. An efficient unit, which meets modern needs in every way and occupies a minimum of space, has been devised by the Cabranette Corporation of Chicago. Seen in the illustrations reproduced herewith the various utilities are a combination made up of smaller and interchangeable units to form a variety of layouts. In the construction of these units conservation of space and operating effort is truly the keynote. The materials used are carefully selected for their wearing qualities and cleanable surfaces.

As shown in the accompanying sketch and as described below a complete

Showing the kitchens of two adjoining apartments with plumbing contained in the wall between

kitchen of full-sized units may be assembled in a space 8 feet 6 inches by 5 feet. This means that the housewife practically does not have to move from her position to reach anything in her kitchen.

There is a full four-burner stove top with a standard 18-inch combined oven and broiler beneath. Adjoining the oven and separated from it by a well insulated steel and asbestos wall is the pot and pan compartment with a drawer for cutlery immediately above it.

The drain board performs the two-fold purpose of drain board and table top. Directly underneath this table top is a bread board. Above the table top are glass bins for coffee, flour or sugar.

Cupboards extending the full width of the equipment are supported on brackets attached to the base of the equipment.

A modern apartment building, with 160 apartments. Rentals average \$200 per room, per month. Fugard & Knapp, architects

However, each different unit has the high closet or cupboard attached to that unit so that they may be placed at the disposal of the architect. There is a double bottom in the high closet above the range unit, which is well insulated with asbestos against the heat from the stove top. This cabinet also forms a hood over the stove top, the fumes of the cooking being carried off by a vent in the back splasher underneath the cabinet.

On the top of the refrigerator, which is of 75-pound ice capacity, is placed another combination porcelained, iron drain board and table top. The cabinets above are fastened to the refrigerator by means of brackets, and directly

underneath this cabinet is a row of tilting bins, which may be used for vegetables, flour, packages, etc.

Summarizing this description of the Cabranette Kitchen Units, it will be seen that it is possible to place the following utilities within a room containing only 42 square feet.

A 72-inch sink with two drain boards; a 26-inch, four-burner range top; an 18-inch oven and broiler; a 75-pound refrigerator (3 door); 24 lineal feet of shelving; a pot and pan storage compartment; a cutlery and utensil drawer; glass bins for flour and sugar; metal bins for packages, vegetables, etc.; a bread board; spice jars, etc.

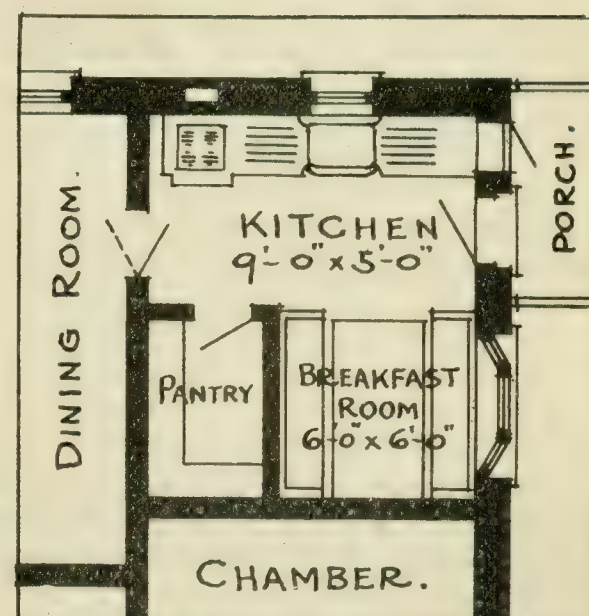

In apartment houses where it is important to conserve space, a great saving of money can be effected by placing the kitchen equipment on one wall and the equipment in the two adjoining apartments back to back.

The sketch showing the kitchens of adjoining apartments illustrates this point. It is possible then to place all of the plumbing in the wall between and use one plumbing stack for the two adjoining apartments.

With the two-wall arrangement the same units can be assembled in an even smaller floor space, having the same features as the one-wall arrangement, but one drain board must be replaced by a square porcelained enameled table top. These tops are furnished for either the range or refrigerator units.

The kitchen of the small house is usually a room about 9 feet by 11 feet. In the sketch shown below, advantage is taken of the use of a compact arrangement of the kitchen units by devoting the remainder of the floor space of the room, not required for the kitchen, to a storage pantry and a breakfast room, all within the space formerly used exclusively for the kitchen.

All units are full sized and are furnished either right or left hand. It is the

Gaining a breakfast room and pantry by the use of condensed equipment in a bungalow kitchen

arrangement of parts that gives the compactness that cannot be gained by any other equipment.

The units are made of "Armco" ingot iron sheets, ranging from 16 gauge to 24 gauge. It would be impossible to construct units such as these with any other material, and no other finish except porcelain would withstand the heat of the oven or the wear that such equipment is subjected to. The ease with which it may be kept clean is a most desirable feature. All exposed surfaces have a porcelained finish and are of 20 gauge metal. The oven parts vary in gauge in accordance with American Gas Association standards. All units are of the same height, 6 feet 9 inches, which makes it possible for an architect to adapt these units to his plan in a variety of ways and if the plan is not made to accommodate the units, the units can be placed to accommodate the plan. Of course, if the architect starts out with certain definite units in mind, he can effect a great saving in the cost of his building. It is, therefore, well for an architect to consult with the owner and definitely decide what equipment to use before going ahead with his plans, just as he definitely decides to use a 5 foot 6 inch bath-tub before he lays out his bath-room.

As an example of the type of apartment building that modern conditions have made popular, and where such a kitchen unit just described is ideal, let us consider a structure recently erected in Chicago, on the universally-known Lake Shore Drive. The building is eighteen stories high, of steel frame, fireproof construction and contains 160 apartments of one, two and three rooms, each with bath. The three-room apartments will be let completely furnished with hotel service at a monthly rental of from \$575 to \$775 each.

The kitchens of the apartments will be equipped with kitchen units built by the Cabranette Corporation of Chicago.

This building was designed by Fugard & Knapp, architects, and built by the McLennen Construction Company, and represents the highest type of apartment house architecture and construction.

Thus we see the problems of modern construction not only require inventive genius, but ability to combine utilities to conserve space and decrease labor in order to satisfy modern economic demands.

—*Pure Iron Era.*

(Continued from Page 525)

itself readily to its purpose and must be arranged so that a sideboard or buffet will not be an incumbrance; a convenience instead of an intruder.

The combination living room and bedroom equipped with a folding bed which is really invisible when not in use, has

become an accomplished fact and is accepted as solving a part of at least of the problem of economically housing a small family and at the same time furnishing exceedingly comfortable quarters. The one room apartment with a small bath room and kitchenette, with a pullman table as a kitchenette feature is meeting with much favor among both landlords and tenants.

The combined bed room and living room is about half as large again as the usual small apartment house bed room. Dimensions of such rooms are frequently 12x18 feet or sometimes 12x16 feet. A good deal of architectural ingenuity has been expended on structures whose upper stories are divided into rooms of this type.

Old ideas of apartment houses were that they must be several stories in height to be adequate revenue producers, but it has been found that in moderate sized cities at least, the two-story brick building substantially constructed with store rooms on the ground floor are good money earners and desirable places of residence.

Cities in Ohio and other central states are specializing in buildings of this class.

—*National Builders' Bulletin.*

#### ARCHITECT AND ENGINEERING

The relation in an architect's practice which the two elements, construction and design, shall bear to one another, has always been somewhat confusing. It has not been an infrequent occurrence to find men who were extremely clever at designing, and yet who could not carry out their designs without the greatest assistance from others specializing in construction. While the scheme of our business today requires a certain amount of specialization in any work, it is unfortunate if this specialization in architecture is carried to the extreme of ignorance of allied subjects, the designer knowing only how to design.

Such narrowness must work against the development of sound architectural forms and motives. Steel, to name the modern material of the widest use, has created opportunities for great originality in design, but what designer can make the most of these opportunities if he doesn't know the material, its strength and peculiarities? Such a one must continue the use of old forms in a manner that is now illogical.

A better knowledge of structural material than is now possessed by the average will also increase the opportunities for architectural design. It is most unfortunate that subjects which are crying out for esthetic handling, subjects such as bridges, factories, and warehouses, are so often handled by engineers alone. In this way many latent possibilities where our everyday surroundings might

be improved are totally lost. These problems are not confided to the architect, largely because the public's opinion of him and of his ability to handle them is not very high. It, therefore, behooves the profession to correct this condition and bring within the scope of its work these problems now largely given to the engineer.

While architecture has been defined as "the art of building beautifully," it ought to be amplified by the phrase "and constructing soundly," for though the esthetic effect resulting from a design is of great importance, the client is interested primarily in the actual structure, and its permanence and soundness will be the most important considerations to him. And, from a business point of view, the pleasing of the client is an important factor in a practice. The architect is employed not merely to prepare drawings (except in very unusual cases), but he is to produce a building of a thoroughly sound character and, unfortunately, in many cases the necessary knowledge is lacking. Of course, on large work consulting engineers may and should be called in to work in conjunction with the architect; but even then the best results cannot be obtained unless the latter can grasp the engineer's point of view and discuss with him the problems that arise.

In the smaller work very often the special structural knowledge is supplied by the manufacturers of building materials, and here again the result cannot be the best unless the architect possesses enough knowledge to check the work. Otherwise he is unable to know whether too much or too little material has been used; there may be a gross and expensive waste or the amount used may be dangerously small. Yet the responsibility of the result lies with the architect.

To be sure, it cannot be expected that the architect shall have the special education that is necessary for great engineering feats. The variety of subjects his profession requires him to understand and the scope of his activities preclude any highly cultivated knowledge along that special line.

Perhaps the most nearly ideal substitute for the architect-engineer is a partnership including an architectural engineer. With this scheme the constant contact with the work of the office will result in a sympathy and understanding of purpose which is essential to the best solution of problems, and which is not possible when outside assistance is called upon for special cases. However, such a specialized partnership is not practicable in the small practice, and so we again face the fact that the architect should have a better knowledge of building construction than is generally the case today.—*Exchange.*

## As The Editor Sees It

THE Apprenticeship question is still of paramount importance to the building industry, and, in fact, to the country at large. Sane-minded, thoughtful business men no longer cry for unrestricted immigration, for all are convinced of the extreme inadvisability of throwing open the doors of the country to the hordes of undesirable aliens who would flock to these shores.

We have pondered a bit lately over the popularity of the white collar job as compared with the overall job. What is it that makes a perfectly healthy, active young fellow prefer to sit and add columns of figures with a monotony that promises no change in the future, rather than to join the creative ranks of the skilled worker. Only another one of the false values which have been created and fostered by the times in which we live. It is surely time that the joy of seeing something grow; the dignity of helping to create and produce the essentials of life should be inculcated in the minds of the youth of the country. No one who has seen a vacuous looking youth pounding an adding machine, and then looked at a boss carpenter solving his problems can question for a minute the superior intelligence demanded by the latter job, nor the greater opportunity for development and self-expression attached thereto.

At present the white collar men are being forced into overalls; let us hope

they will choose to stay there.

Milton V. O'Connell, in the *New York Herald* throws some light on this subject in his article, "White Collar Men Put on Blue Jumpers," reprinted herewith.

"From music to mortar, a trowel in place of a trombone—strange but true is this metamorphosis through which just one individual of the large mass of shifting employees has passed within the last few weeks. The name of the musician who now wields a trowel heavy with mortar, who sets a ragged brick in place as expertly as an old hand is not necessary for the purposes of this story.

The newspapers have been saying lately how the so-called "white collar man" was finding it harder and harder to keep his head above the rising tide of young women workers eager to take his job at lower rates and do it just as efficiently. On different pages of the same papers were stories to the effect that the building programs of this city and state, and in fact of all the forty-eight states, would be seriously jeopardized and delayed by the unusual shortage of skilled or unskilled labor. Manual labor was at a premium. It is yet for that matter. It is said that hundreds of "white collar men" took the hint. Today the ranks of the clerical armies are thinning, as far as the men are concerned, and they are shifting to what some people call real work. Hundreds of them are laying the

white collar aside for the brown army shirt and a pair of overalls or working trousers. The situation has brought to light a number of humorous changes such as the musician who now wields the trowel.

### *Will Soil Hands for Increase of Wages*

Investigation has shown the exodus of white collar men to be far more general than had been supposed. At every one of the large schools, private or public, where men can take courses in manual labor or mechanical work the same story was told—that recently they had received large numbers of applications from men who are of a different type from their usual run of students. The men who were applying were not drifters, not men who had no work but men who were awake to the realization that they must change from an overcrowded profession to the kind of work which was in demand and was better paid for.

There are a number of large industrial and mechanical schools in New York and among these one of the largest is that maintained by the Y. M. C. A. at 139 West Fifty-sixth street. There, in an old loft building, a dozen brick chimneys are built and torn down daily; five or six beautiful tile floors are laid and ripped up, and the walls and ceilings are given a good plastering several times every twenty-four hours. They haven't room enough there for the number of men who want to learn how to set brick

**BLUE  
PRINTS**

in the proper manner. Why? Well, bricklaying is paying about \$12 a day now!

Among the record cards is one of "John W." The school requires that the name be anonymous, but the fact remains that a few weeks ago John W. was wielding the long handled baker's wooden spade in a stuffy flour dusted cellar at unearthly hours in the morning. For that he got \$18 a week and it was made clear to him that his job could be filled any day. Then he talked with a friend who had just cashed in for a week's work in the building lines who showed him an envelope that read \$85. A short talk—and enrollment followed in the school where he would learn how to make his envelope read likewise.

Then, also in the bricklaying class is "Alfred J." Alfred was really a "white collar man." The baker's case was cited herein merely as an instance where the professions were considerably remote. Alfred was the snappiest shipping clerk that "X-Y-Z & Company" ever had. He had been with the company for five years and was drawing down \$21 a week. He happened to look at the scale of wages paid by the building contractors for ordinary laborers and then said a fond farewell to his shipping department. He is studying the angles of bricklaying and it is said that in the shipping room of "X-Y-Z & Company" a sprightly bobbed hair girl directs the outgoing shipments.

Not all the trainees preparing for the assault on the building trade jobs are "white collar men." But the steady turning of others toward the manual labor work has had its tremendous influence on these white collar workers. In the classes in bricklaying, more than 30 per cent. of the applicants and students were clerks or office men previously. In the plastering class the percentage went five points higher, while the tile setting course showed that more than fifty per cent. of its students were converted "white collar men." Shorter hours and longer pay provide a good balance against the fact that they may be doing what some persons refer to as "menial and dirty work."

Others among the applicants for these courses are a number of former train men, elevator runners, clerks, an engraver here and there, a few painters (house as well as potrait) and odds and ends from virtually every business known. The prize classification, however, is held by the tile setting course—a former broker.

Whether "George L." was one of the many who went under when the distress signals of failure fluttered from so many mastheads in Wall Street a year ago or not, "George L." is there figuring out his neat little pattern of blue and white tiles, and some day may be seen hard at

work on a brand new restaurant in the course of construction or redecoration. "George L." is becoming quite adept, and he always did have a sort of artistic sixth sense which had never been cultivated and which comes in very nicely on this job.

#### *Former Butler Wields a Little Trowel*

Side by side with the ex-broker, wielding his little trowel with a particular dignity, stands Hubert. Hubert has "but-tled" for several families in the neighborhood of Park and Fifth avenues. Hubert declined to tell why he was trowelling instead of buttlng.

Edward M. Edward for years has been a gardener. He has tended every sort of garden from the elaborate landscape picture affairs along the Sound to a modest little patch in the rear of some olden time Washington Square mansion. Edward knows the trowel well. Not the mortar trowel but its first cousin. Gardeners were plentiful and laborers were not, so Edward wields the nearest thing he can find to his garden trowel. The instructor says he'll make a crackerjack mason one of these days!

Over in a corner where the tile pattern is set out, the man with the stooped shoulders is a former freight agent. He bent his shoulders over a desk in a small railroad freight station over in New Jersey not so long ago. Now they are bending again, but there seems to be a better angle or curve to that bend. He is puzzling out a problem far more interesting to him than a poorly scribbled illegible invoice or freight order. He is another recruit for the army of building labor.

Three weeks ago one of the pupils was washing windows in a Wall Street building strapped to the sill on the thirtieth floor. Now he is learning how to construct just such a ledge as that on which he stood. His neighbor in the plastering school, whose graduates will make about ten dollars a day, a week ago took orders in a side-arm lunchroom. Beyond him is a business manager who, until recently sat within a glass walled office and dictated to a snappy stenographer. "Reorganization" of the firm and subsequent "retrenchment" in help threw him out of employment. His final step was to the bricklaying school, where he is at least satisfied that he is going in the right direction.

So it goes—salesmen, brokers, cooks, truck drivers, bookkeepers, men stenographers and secretaries, not college graduates any of them, but men who rose from the ranks and could go no further in a crowded line of work and were forced out by the influx of women workers. They are all reverting to the manual labor. Many of them have been square pegs trying to fit into a round hole and

**Store and Apartment**, Nanticoke, Pa. Architect, George Price, Miller Bank Building, Scranton, Pa. Owner, Anthony Arrow, Nanticoke, Pa. Frame, 2 stories, 20x38 feet, shingle roof, pine floors, steam heat, electric lighting. Contract awarded to Frank Collins, 123 Loomis Dewey Park, Nanticoke, Pa.

**Hotel**, Carbondale, Pa. Architect, V. Russonello, Scranton Life Building, Scranton, Pa. Owner, care of architect. Brick, stucco, 3 stories, 30x46 feet, slag roof, pine floors, electric light. Contract awarded Mackle Const. Co., Scranton, Pa.

**Residence**, Scranton, Pa. Architects, Morris & McHale, Mears Building, Scranton, Pa. Owner, A. A. Sweetser, Scranton, Pa. Hollow tile and stucco, 2½ stories, 32x34 feet, hot water heat, electric light, tile work, tile roof, hardwood floors. Contract awarded Fred Knee, 1030 Park avenue, Scranton, Pa.

**Residence**, Bethlehem, Pa. Architect, H. J. Weigner, Bethlehem Trust Building, Bethlehem, Pa. Owner, Richard Howell, Bethlehem, Pa. Brick, cinder block, 2½ stories, 36x28 feet, hot water heat, electric light, slate roof, hardwood floors, tile work. Contract awarded F. F. Speck Const. Co., 51 Wall street, Bethlehem, Pa.

**Residence and Garage**, Churchville, Pa. Architect, Harry Parker, 1120 Locust street, Philadelphia. Owner, Alex. Auerbach, care of architect. Hollow tile and stucco, 2½ stories, 60x35 feet, hot water heat, electric light, slate roof, hardwood floors, tile work. Contract awarded Frank E. Heston, Churchville, Pa.

**Church (alts.)**, Scranton, Pa. Architects, Schroeder & Schmitt, Weitzenkorn Building, Wilkes-Barre, Pa. Owners, St. Mary's Greek Catholic Church, Scranton, Pa. Steel work, art glass, electric light, general interior work, ornamental plaster. Contract awarded to John Dobson, Wilkes-Barre, Pa.

**Residence**, Lancaster, Pa. Architect, H. Y. Shamb, Imperial Buildig, Lancaster, Pa. Owner, H. Ripple, Lancaster, Pa. Stone, 2½ stories, 30x30 feet, hot water heat, electric light, slate roof, hardwood floors, tile work. Contract awarded to W. Zook, 311 North Queen street, Lancaster, Pa.

## New Jersey Construction News

**Bridge**, Perth Amboy, N. J. Architect, private plans. Owners, New Jersey State Highway Commission, Trenton, N. J. Reinforced concrete viaduct, 1,536 feet, steel plate girder spans 1,536 feet, concrete piers, foundations with granite, 5,535 lineal feet of earth fill. Deposit, \$100 bond. Owners taking bids due September 11th, 12 M.

**High School**, North Wildwood, N. J. Architects, associate, H. Rex Stackhouse and Donahue & Fitzmaurice, 1120 Locust street, Philadelphia. Owners, School Board of Wildwood, care of T. D. Akarman, North Wildwood, N. J. Brick, steel, cut stone, 3 and 2 stories, 164x36 feet and 91x52 feet, asbestos built-up roof, cement and maple floors (heating, electric and plumbing reserved), metal lath, tile and marble work, rolled steel sash, hollow metal doors, bond, iron work and stairs, safety treads, hollow tile. Owners taking revised bids due August 30th.

**School**, West Main street, Moorestown, N. J. Architect, G. O. Lovatt, 420 Walnut street, Philadelphia. Owners, Our Lady of Good Council Roman Catholic Church, Rev. J. B. Hendrick, Moorestown, N. J. Stone, 1 story and basement, 55x90 feet, steam heat, electric light, slag roof, maple floors. Plans about completed. Architect will take bids in a few days.

**Office Building**, Trenton, N. J. Architect, William Klemann, First National Bank Building, Trenton, N. J. Owners, Acme Rubber Co., Trenton, N. J. Brick, reinforced concrete, 2 stories, 40x80 feet, slag roof, electric light, hardwood floors, rolled steel and hollow metal sash, heating extension. Plans in progress.

**Theatre and Store**, Lambertville, N. J. Architect, W. Hankins, 39 East State street, Trenton, N. J. Owner, George L. Eyrk, care of architect. Brick, steel, reinforced concrete, fireproof, 2 stories, 40x172 feet, slag roof, concrete floors, hollow tile, roof ventilators, metal lath, electric light, tile and marble work, hollow metal sash and skylights, fire doors, iron work. Architect ready for bids.

**House**, Hill Top, Princeton, N. J. Architect, William Klemann, First National Bank Building, Trenton, N. J. Owner, William T. White, on premises. Frame, 2 stories, 28x20 feet, pipeless heat, electric light, shingle roof, pine floors. Architect sub-letting.

**Women's College**, New Brunswick, N. J., \$250,000. Architects, Department of Institutions and Agencies, Division of Architecture and Construction, Trenton, N. J. Owners, State of New Jersey, care of architects. Brick, steel, concrete, hollow tile, 2 stories and basement, 158x78 feet, slate roof, mastic and hardwood floors, hollow tile, roof ventilators (heating, plumbing and electric reserved), tile work, marble work, rolled steel sash and skylights, iron stairs. Architects ready for bids.

**Church**, West State street, Trenton, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owners, First Christian Science Church, care of Mrs. Bonham, West State street, Trenton, N. J. Brick and frame, 1 story, 84x42 feet, asbestos shingle roof, electric light, hardwood floors (heating, plumbing and electric reserved), tile work. Owners taking bids.

**Road Work**, Route No. 4, Sect. 20, Manasquan River, Sea Girt, Monmouth County, N. J. Architect, private plans. Owners, New Jersey State Highway Commission, Assembly Chamber, Trenton, N. J., A. L. Grover, Chief Clerk. Reinforced concrete, 39,389 square yards, 14,876 cubic yards excavating, bond. Owners taking bids due August 27th, 11 A. M. (Standard time).

**Road Work**, Route No. 13, Sect. 5, Trenton to Lawrenceville, Mercer County, N. J. Architect, private plans. Owners, New Jersey State Highway Commission, Assembly Chamber, Trenton, N. J., A. L. Grover, Chief Clerk. Excavation 15,000 cubic yards, concrete foundations 51,000 square yards, surface asphalt 50,000 square yards, concrete curbs 17,000 square yards, bond. Owners taking bids due August 27th, 11.15 A. M. (Standard time).

**Road Work**, Route 8, Sect. 4A, Charlottesburg-Newfoundland Road, Passaic and Morris Counties. Route 14, Sect. 9, Oceanview-Seaville Road, Cape May County, reinforced concrete paving and 2 small bridges. Route 16, Sect. 5, South Somerville-Woods Tavern Road, Somerset County, reinforced concrete paving, 3 small bridges and 6 small culverts. Owners, New Jersey State Highway Commission, Trenton, N. J., A. L. Grover, Chief Clerk, who are taking bids due August 20th.

## New Jersey Contracts Awarded

**Residence and Garage**, Atlantic City, N. J. Architect, Samuel Abramson, 2313 Walnut street, Philadelphia. Owner, D. Louis Blumberg, Atlantic City, N. J. Hollow tile and stucco, 2 stories, 45x35 feet, hot water heat, electric light, slate roof, hardwood and cement floors, tile work. Contract awarded to Alex. Nedelman, 400 Guarantee Trust Building, Atlantic City, N. J.

**New Store Front**, 941 Broadway, Camden, N. J., \$65,000. Architect, A. B. Gill, Law Building, Camden, N. J. Owner, Joseph Bertman, on premises. Cut stone, slag roof, oak floors, carpentry, mill work, brick work, painting, glazing, plastering, steel, inter-glass, tile and marble work (cut stone, electric work, window frames, fire insurance reserved). Contract awarded H. Fearn, 4402 Westville street, Camden, N. J.

## Delaware Construction News

**Road Work**, Wilmington, Del. Engineers, C. E. Grubb Co., Engineers' Public Building. Owners, State Highway Department, Dover, Del. Reconstructing 2.4 miles Lancaster Pike from Loveville to Hockessin; 0.91 mile Lancaster Pike, from Hockessin and extending to Pennsylvania State line; 1,100 feet road through village of Stanton.

**Grading and Paving**, Delaware. Engineer, C. D. Buck, Public Building, Wilmington, Del. Owners, State Highway Department, Dover, Del. Grading and paving 4.22 miles, Cont. C S 26, Clarksville to Bethany Beach; 11,500 cubic yards excavation, 6,100 cubic yards cement concrete pavement or slag cement concrete, etc.; 0.508 mile, Cont. C K 17, through Frederica, 1,200 cubic yards excavation, 50 tons broken stone base course, 890 cubic yards cement concrete pavement; highway, Cont. M 8; 120 feet temp. timber bridge, 10 feet wide, Seaford, Cont. 42 A. Owners taking bids due August 29th.

## Miscellaneous Construction News

**Residence (alts. and add.)**, Jamestown, R. I. Architect, William F. B. Koelle, Otis Building, Philadelphia. Owner, Dr. John Marshall, 1718 Pine street, Philadelphia. Stone, new porches, new fences, miscellaneous alterations. Plans in progress.

### Proposals

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., Aug. 8, 1923.—Sealed Proposals will be opened in this office at 3 P. M., Sept. 5, 1923, for the construction of the United States Post Office at Waterloo, New York. The drawings contemplate a one-story and basement building, 75'x50', with brick facing and of non-fire-proof construction. Drawings and specifications may be obtained from the Custodian of the site at Waterloo, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from Page 532)

were but partially successful. Now they have found something new which interests them. They have swallowed false pride, put on overalls and are looking forward to making more money than they ever did before.

Wm. H. Lee, architect, has moved from 32 S. 17th St., Philadelphia, to larger offices in the Schaff Building, 1505 Race St., Philadelphia.

John J. Carlin, architect, has opened new offices at 1619 Chestnut St., Philadelphia. Mr. Carlin was formerly in the Drexel Bldg., Phila.

## EARLY AND MODERN COLONIAL *Three Hundred Years Scarcely Changes Style*

There are many reasons why Colonial is a popular style with American home builders. Not only is it a type that builds at reasonable costs, but it breathes of human associations, of family ties, of fireside happiness. It possesses the spirit of the hearth.

When properly designed and built, Colonial produces a home of beauty. Colonial architecture, as we know it in this country, is an American interpretation of what in England is called "Georgian architecture." The English colonists, who immigrated to America in the early part of the 17th Century, and to whom we owe the Colonial home, were naturally influenced by Old World traditions.

While the English built their houses of stone, the Colonists built of wood, be-

cause wood was much more readily obtainable and was a more flexible and easily molded material. This accounts for the delightful grace and delicacy of Colonial details, the narrow dormers, the 12 lighted windows, the carefully molded cornices, slender columns, simple doorways, nicely proportioned balusters and newels, and fine forms of permanent furniture on the inside of the house.

The outstanding characteristic of the best Colonial work is delicacy. Without this delicacy it is seldom good Colonial.

Because of the unusual rectangular plan and lack of expensive gew-gaws, a Colonial house can be built inexpensively of any material. There are no wide overhanging roofs and meaningless details to increase building costs.

In the early Colonial homes the gables were frequently nothing more than single boards with, perhaps, a molding under the shingles. Dormers were always small and few in number. The front entrance doorway was always the focal point. Shutters were used at the windows, and were invariably painted to contrast with the house. These details of design have stood the test of hundreds of years, and we still find the Colonial satisfying as it is based on the principles of good design.

One of the principal architectural features, if the house be of two stories, is the stately stairway with slender balusters and newels exquisitely formed. Corner cupboards and china closets are used in the dining room, and there are nearly always one or two fireplaces, with a simple mantel design, usually of wood.

The Colonial house properly is a white one, inside and out. If you want to stick closely to tradition, you can have reds or yellows also.

Colonial, generally speaking, is a straightforward solution of an architectural problem, which usually results in a certain dignity because of its nicely spaced windows and studied details, and the very important consideration that apparently it never strives for effect.

Probably no current style of architecture offers the home builder so wide a selection of well turned and faithfully modeled details, interior finish and trim, as does Colonial, and the satisfying part of this is that most of the details are readily obtained from most lumber dealers' stock. This means a distinct lessening of building costs, because it eliminates the feature of "extras."—*The Small House.*

The man with an order to place doesn't hunt you up in the city directory these days. He hasn't the time. If he can't find you in your trade magazine he can and does find somebody else, and that somebody else books the order.

## ARCHITECTS AND CONTRACTORS

It is common to see the statement that the building industry is the second largest in the United States,—agriculture alone being greater. But that estimate is based on the consideration of the entire industry as a unit. As a matter of fact it is far from it. Indeed there is a wider gulf between architect and contractor and between the contractors themselves in the various trades, than there is between a farmer and a manufacturer of automatic machinery. This should not be so. The failure of the building industry to function co-operatively and harmoniously is not only unsatisfactory and costly to the various units which make up the industry, but results in great economic loss to the community.

It seems quite natural that the first move toward improving conditions in the building industry should come from the architects and the contractors. They are the originating and guiding elements in all building programs. The public gets its information and makes its decisions from them. They have much in common. And yet they do not understand each other. There is no doubt that many architects have a very poor opinion of contractors in general and on the other hand the contractors do a great deal of grumbling at the treatment accorded them by architects.

Here and there, in the large cities attempts have been made to unify the industry by the formation of building congresses. They have done much valuable work, but they encounter serious limitations because they are trying to harmonize too many conflicting elements at one time. Several national organizations of contractors and architects are getting together on matters of wide and general interest and they are doing good work. However, we believe that the most effective means of securing quick results and those which will be most directly helpful to the individual contractor and architect is by periodical state or sectional conferences between representatives of contractors' and architects' organizations.—*Associated Contractor.*

If you see a tall fellow ahead of the crowd,

A leader of men, marching fearless and proud,

And you know of a tale, whose mere telling aloud

Would cause his proud head to in anguish be bowed,

It's a pretty good plan to forget it.

You can't expect to do your "bit" of this busy world's business unless you enlist in the advertising ranks.

## STUCCO SHOULD ALWAYS BE PAINTED

Whenever stucco is used it should be painted whether on lath or masonry, says a writer in the *Washington State Architect*. In the best of stucco work there are hair cracks through which moisture can find its way. In cold weather this moisture freezes and gradually expands and forces the stucco out. Sooner or later large cracks will appear. All of this may be avoided by using two or three heavy coats of concrete paint. The paint fills up the minute cracks and prevents moisture from entering. The appearance of the stucco is very much improved also by the introduction of some color in the paint.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising or advertising from an emotional standpoint.—*Elbert Hubbard.*

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

To be poor in a wealthy country, to be sick in a good climate, to be inefficient among a progressive people, is a sign of unwise educational methods. Such people were not taught to battle with the world or meet life's emergencies.—*Thoreau.*

## As The Editor Sees It

### THE PUBLIC'S RELATION TO BUILDING

*New York Public Group Presents a Con-  
structive Report, the Result of its  
Labors, Since April 30, 1923*

No industry so important as the building industry at this time can be considered apart from the interests of the community, and therefore any attempt to deal with the problems arising must give heed not alone to labor and the employer, but to the public as well.

Any action taken without regarding the rights or views of all three groups tends to lessen participation in the industry by that element whose interest is unfavorably affected. This leads to the natural development of corrective conditions more favorable to renewed participation by the disturbed group, and therefore results in the continued co-operation of all the essential factors.

But while the three groups are interdependent, for many reasons the interest of the public must be recognized as paramount. Builders and laborers recognize that the industry thrives or languishes as the buyer, that is, the public, enters or neglects the building field.

Living costs for the people as a whole are largely affected by the cost of building, not alone through rents which reflect the cost of homes, through the cost of manufactured articles which must bear the cost of the factories, the shops, and the means of storage and transportation,

but also through the immense demand for construction materials which is the chief support of today's business activity, and the increase of income to the government and the individual through the improvements which an active industry produces.

Success, that is, prosperity in the industry, requires control and co-operation instead of the assertion of the claims of one group against the others, and better conditions for all cannot be secured merely through arrangements between labor and employer, which are much discussed, but require as well as an understanding on the part of the public whose interest is most important, though often disregarded.

Because of their recognition of these principles a group of New York builders, on April 30, 1923, called a meeting of a large number of architects, owners, builders, and representatives of loaning institutions to present information regarding the serious situation then existing or developing in the building industry. The consultation and advice of those present was desired by the builders, and, at the close of the meeting, the Committee of the Public Group of the Building Industry was appointed for the purpose of suggesting further action.

The committee, which included architects, builders, representatives of the loaning institutions, and other business men, was later strengthened by the addi-

tion of economists and social welfare workers, and was placed in what was thought to be a less partisan position by the voluntary resignation of the builders. Since that time meetings of the committee have been held for the purpose of consulting with the Building Trades' Council of New York City, Long Island, and vicinity; the New York Building Trades' Council; the New York Executive committee of the bricklayers; and also with a committee from the Mason Builders' Association.

The committee has also been cognizant of the work of the New York section of the National Congress of the Building and Construction Industry, an organization which is working for the betterment of conditions in the building industry. Its membership includes representatives of labor, capital, management, the professions, and the public. In addition to its work in developing an apprenticeship plan, and its study of the problems of seasonal employment, both of which will later be mentioned in some detail, the Congress has established a code of fair practices in the building industry and is supporting this through a committee on codes.

It now has in course of organization a branch of the Arbitration Society of America, which will be established as a court for the arbitration of questions in construction that would be otherwise judicable. As a permanent means

**DRAWING

**BLUE  
PRINTS**

of improving conditions in the industry the Congress seems to present for the time the most comprehensive plan, one which the whole industry and the public ought to support.

The problem immediately presented for the attention of the committee was that of labor wage demands and, more especially, the action of the bricklayers in withdrawing from certain building operations of this city. During the period of the committee's work these immediate labor difficulties have been temporarily adjusted, and a settlement of the bricklayers' demands has been reported. The emergency pressure, as far as it relates to terms of employment, has been lessened and, in this respect, the situation which led to the assembling of the committee has been changed.

The fundamental conditions, from the standpoint of the public group, however, have not been improved. The number of workmen has not been increased sufficiently to make possible the prompt execution of work urgently needed, such as the school buildings of the city. The daily output or production by the individual workmen has not been increased. It is reported to be much below that of some years ago; prices of materials have changed—some are higher, and some lower. Generally the cost of building has increased and the situation gives no promise of stability for the future except through a lessening of the demand for buildings, a movement which already appears to be under way.

Fluctuations in the building industry result in hardship and in loss for all of the groups interested. A condition of stability would be of greater benefit to all than are the temporary advantages accruing to special interests under extreme conditions. Within the range of the active and inactive periods of the industry may be found extremely high wages offset at another time by a more extensive unemployment of the workers than in any other industry in New York.

A higher unit cost of building here than anywhere in the United States, and low returns on investment, bring New York to a situation such as that through which we have been passing, one in which rent laws, tax exemption, and other consequent economic disturbances upset the established standards of investment values and force a speculative condition on the owner and investor, the real estate business man, and the building operator, all of whose interests are best served by stable conditions.

It is not alone labor's income which is uncertain. The professional men engaged in the industry, the general builders, the special trades, and the material men suffer extreme fluctuations in income through wide variations in the industry's activity. In order to do the

work which New York has attempted to do this year and last year these men must maintain organizations, plants, or stocks of material double those needed in the inactive periods.

These conditions are hurtful to the interests of the public as well as of those directly engaged in the industry. It is with the purpose of aiding in the correction of these conditions by the stabilization of the industry that the committee of the public group directs attention to a number of matters which have seemed of sufficient importance to warrant special mention in the hope that these suggestions might be further developed by those interested in the building industry.

The outstanding problem of the industry this year has been the supply of labor. The committee wishes to emphasize the fact that, while it has been forced to deal chiefly with this factor of the situation it has not been able to investigate the equally important items of production cost effected by the supply and the prices of materials, by transportation, and by profits. It is clear that stabilization involves a balance among all the factors entering into production, and that there would be little advantage in increasing the supply of workmen beyond the capacity of the trade, or of stabilizing wages while other costs remain unstable.

To find enough labor to supply an abnormal peak demand would be merely to intensify future unemployment and to emphasize every undesirable feature of the business cycle. It is as important to avoid a labor surplus as it is to remedy a true labor shortage. For this reason a more thorough investigation than the committee has been able to make is essential, and the following suggestions must be interpreted with this reservation in mind.

The acute labor shortage is not confined to the bricklayers, whose scarcity has been made so well known through New York's efforts to build schools. A similar condition exists in the number of plasterers and will shortly be more acutely felt and better understood as this trade is required for the completion of buildings now under way. Other trades also are more or less under-manned in spite of the fact that New York has drawn very largely on surrounding districts for a supply of workmen. This condition is now generally understood and it is not necessary, in discussing this subject, to go into detail regarding the existence and the proportions of the shortage in the number of skilled men required to carry on building operations in New York City.

The special point to which attention may well be given is the necessity of remedying this shortage and the means

**Trestle**, Plainfield, N. J. Engineer, Alexander W. Vars, Plainfield, N. J. Owners, Common Council, City of Plainfield, City Hall, Plainfield, N. J. Concrete and steel railroad trestle, 100 feet long, 15 feet high, with retaining wall 60 feet long and 15 feet high. Owners taking bids due September 4th at 8.30 P. M. (daylight saving time).

**Road Work**, New Jersey. Engineer, George K. Allen, Jr., 60 Broad street, Red Bank, N. J. Owners, Board of Chosen Freeholders, County of Monmouth, Bryant B. Newcomb, Director, Freehold, N. J.

Reconstruction of Riverside Drive, Road No. 52, Section 1, reinforced concrete pavement. Deposit of \$10.00.

Reconstruction of Red Bank-Oceanport Road No. 45, Section 1, reinforced concrete pavement. Deposit of \$10.00. Owners taking bids due September 5th at 11 A. M. (daylight saving time).

**Road Work**, Route 8, Section 4-A, Charlottesville-Newfoundland Road, Passaic and

Morris Counties, N. J. Owners, New Jersey State Highway Commission, Trenton, N. J. A. Lee Grover, Chief Clerk, Trenton, N. J. Lowest bidder: R. D. Richardson, Scranton, Pa., \$2440,547.28. Route 14, Section 9, Ocean View-Seaville Road, Cape May County, N. J.; lowest bidder, William Eisenberg, Smith-Austermuhl Building, Camden, N. J., \$197,688.74. Route 16, Section 5, Somerville-Woods Tavern Road, Somerset County, N. J.; lowest bidder, J. F. Chapman & Son, Hillside, N. J., \$257,656.18.

## New Jersey Contracts Awarded

**Hotel**, Atlantic City, N. J. Architect, Vivian B. Smith, Guarantee Trust Building, Atlantic City. Owner, D. Innelli, care of architect. Fireproof, 6 stories, 50x90 feet, composition roof, pine floors, hot water heat, electric light, metal lath, tile work. Contract awarded to Wilbert Beaumont, 1 South Tennessee avenue, Atlantic City, N. J.

**Factory (add.)**, Camden, N. J. Architects, Stone & Webster, Real Estate Trust Building, Philadelphia. Owners, Victor Talking Machine Co., Camden, N. J. Reinforced concrete, brick, steel, 8 stories, 60x400 feet, steam heat, electric light, rolled steel skylights, fire doors, floor hardener, waterproofing, roof ventilators, elevators, cement floors, slag roof. Contract awarded to Stone & Webster, Real Estate Trust Building, Philadelphia.

## Delaware Construction News

**Apartment (alts. and add.)**, Wilmington, Del. Architect, John A. McKibbin, Industrial Trust Building, Wilmington. Owner, name withheld, care of architect. Brick, 3 stories, 20x12 feet, slag roof, general interior alterations. Plans in progress.

**Parish House (alts. and add.)**, Wilmington, Del. Architect, E. C. May, Dupont Building, Wilmington, Del. Owners, Presbyterian Church, care of architect. Stone, 2½ stories, 44x100 feet, hot water heat, electric light, tile roof, hardwood floors, tile and marble work. Architect taking revised bids due September 6th.

**Residences (6)**, Union Gardens, Wilmington, Del. Architect, John A. McKibbin, Industrial Trust Building, Wilmington. Owner, J. A. Bader, Wilmington, Del. Brick, 2 stories, 15x40 feet, slag roof, pine floors, hot water heat, electric lighting. Owner will build.

**Road Work**, Delaware. Owners, State Highway Department, Dover, Delaware. Owners taking bids due September 19th at 2 P. M. Each proposal must be accompanied by a surety bond, certified check or money to the amount of 10 per cent. of total amount of proposal. Deposit of \$10.00 required. Refunded upon return of plans and specifications.

Contract No. CK18, 0.622 miles through Clayton. 1,800 cubic yards excavation, 1,100 cubic yards cement concrete pavement, 10 cubic yards Class A concrete, 200 pounds reinforcement, 60 lineal feet 12-inch C. I. pipe, 60 lineal feet 24-inch R. C. pipe.

Contract No. CS26, 2.16 miles Clark's Cross Roads, Bridgeville. 7,000 cubic yards excavation, 150 tons broken stone base course, 3,250 cubic yards cement concrete pavement, 60 cubic yards Class A concrete, 1,200 pounds reinforcement, 300 lineal feet 15-inch R. C. pipe, 100 lineal feet 18-inch R. C. pipe, 60 lineal feet 24-inch R. C. pipe.

Contract No. CS29, 1.00 mile through

Greenwood. 3,200 cubic yards excavation, 40 tons broken stone base course, 2,375 cubic yards cement concrete pavement, 30 cubic yards Class A concrete, 300 pounds reinforcement, 300 lineal feet 15-inch R. C. pipe.

## Delaware Contracts Awarded

**Residences (4)**, Wilmington, Del. Architect, John A. McKibbin, Industrial Trust Building, Wilmington. Owner, Culver Thatcher, Industrial Trust Building, Wilmington. Brick, 2 stories, 22x30 feet, composition roof, hot water heat. Contract awarded to Peter W. Newell & Sons, Wilmington, Del.

**Garages (2)**, Wilmington, Del. Architect, John A. McKibbin, Industrial Trust Building, Wilmington. Owner, name withheld. Brick, 1½ stories, 20x30 feet, and 1 story, 50x100 feet, slag roof, concrete floors slag roof, rolled steel sash. Contract awarded to J. A. Bader & Co., Wilmington, Del.

## Miscellaneous Construction News

**Bank and Apartment**, Frederick, Md. Architect, Edward Leber, Hay Building, York, Pa. Owners, Commercial State Bank, K. E. Cline, Frederick, Md. Fireproof, 3 stories, 90x32 feet, composition roof, marble, hardwood and cork tile floors, electric light, metal lath, tile and marble work, iron grill, rolled steel skylights, bank fixtures, ornamental iron work. Owners taking sub-bids.

(Continued from Page 548)

which may be employed to this end. The most important, and, it is believed, the most effective plan is that for the development of an adequate number of craftsmen through the apprenticeship system now being developed by the apprenticeship commission of the New York Building Congress.

This Commission is composed of architects, employers, and labor members, who are trying to solve this problem by:

1. Inducing a sufficient number of capable young men to enter the building trades.

2. Encouraging employers to employ their quota of apprentices.

3. Striving to create co-operative effort in providing each of these apprentices with steady employment through his apprenticeship period.

4. Attempting to provide through collective efforts of educational authorities, employers', and employees' associations, a thorough training that will insure for the future craftsmen worthy of the name.

The board of education is assisting the apprenticeship commission by furnishing instruction in classes in the evening vocational schools.

The apprenticeship commission, acting as a central employment office, has been successful in keeping all apprentices at work by having employers send to this office when they are in need of an

apprentice, and by having all apprentices apply at this office when they are out of work. Boys seeking to enter the various trades also apply at this office and are placed in positions as apprentices in the industry.

Both employers and labor are now giving attention and some measure of support to this work in which they have heretofore not completely co-operated. In most trades the quota of apprentices allowed by the unions is much greater than the number in the service of the employers. On the other hand, in some cases employers have requested more apprentices than the unions permit them to have. But if the employers in the building industry will take on the full number of apprentices to which they are entitled under their trade agreement, keep them steadily employed, and insist on the apprentices attending the classes in the evening vocational schools for their technical training for the various trades of the building industry, the first important step will have been taken to provide mechanics for the future.

Another important step would be to make possible the employment of all available mechanics in the work for which they are fitted regardless of where they have been trained. Under existing restrictions in New York it is not possible for certain men who may be properly trained by the New York Trade School, the Y. M. C. A. and other schools to enter the trade which they wish to take up and in which they are so urgently needed at present. Their admission would give them an opportunity to better themselves in trades where additional mechanics are badly needed but are not available, and to benefit the public by their employment.

Increase in the number of men is not more important than increase in the efficiency of the men now available for work. Relief through this channel can be secured in a number of ways. At present jurisdictional trade regulations define and restrict the kind of work a man may do. Consequently they increase largely the number of trades and the number of men required for a given operation. An increase in the cost of the work and in the time required for its execution necessarily results. Out of these restrictive regulations grow jurisdictional strikes which delay work and cause widespread unemployment of labor. A reasonable modification of these restrictions can be made an important source of relief, not only to the public, but to the workers as well, because their employed time could be largely increased, and periods of unemployment minimized, by permitting the mechanic to do whatever work he could do properly.

Consideration should also be given to the repeated statements by builders that the individual output on the part of the workmen has been greatly reduced, not only below the normal work standard of the men now employed, but far below the production of men similarly engaged in previous years. It is desirable that the facts in this phase of the difficulty be ascertained as far as possible and that working conditions fair to all concerned be established.

In many of the detail operations of building construction it is possible, through the introduction of machinery, to reduce the cost by increasing the output, by shortening the time required by the process, or by reducing the number of men necessary to secure a given result. The failure to improve methods in use is due in some cases to lack of enterprise; in others, to the restrictive regulations of labor unions. The critical shortage in man-power will be measurably relieved by the use of machine-power by which cost will be reduced and time will be saved. These possible economies should have the study and the support of all concerned.

During several months of the year composite New York employs only 50 per cent. of its available workmen. In March and April the New York that wants to build gets busy and then, for six months, as now, it has more work than men, and carries on in a frenzy of delays, high expenditure, and makeshifts. Last year the committee on seasonal employment of the New York building congress recommended that, so far as possible, building work be carried on during the dull periods of employment. This procedure would "reduce non-productive expense and waste, and increase production, as a result of having skilled help available instead of relying on incompetent workmen. It will eliminate excessive labor expense, lower the cost of materials, and decrease the contractor's margin of profits, as he prefers to keep his organization in employment as steadily as possible. The advantages are many, and the benefits go to the community generally, as they are incidental in their value to labor, employer and owner."

A further study of the records showed that building permits are issued in New York in the largest number during Spring and Summer months, that contracts throughout the country are usually let at that time, and that repairs are made by landlords and owners during the time when the demand on the industry is at its peak.

The situation can be largely bettered by completion of buildings in advance of rental dates, by rearrangement of present rental dates, and by regulation of the time of carrying on government, state,

city, religious, and educational building construction. In general, all work which can be removed from the period of peak load should be done during the months which have heretofore been periods of comparative unemployment.

Sufficient records of facts to make possible accurate conclusions as to the reasons or remedies for the difficulties arising in the industry in New York are not now available. Careful investigation is required to measure the range of active and inactive periods, to determine the sources and to measure the supply of men, money, and materials; to ascertain the factors affecting the demand for different types of buildings; and to analyze the fluctuations in cost.

This survey can be made by competent investigators working under the direction of the New York Building Congress which, with some additional financial support, is prepared to go on with this work in the belief that the study will help to determine the causes of the extreme irregularity of building activity, and to indicate the possibility of anticipating and controlling its fluctuations.

Unless some degree of balance between supply and demand is reached and maintained in the building industry, existing difficulties related to the industry will not be removed. The architect of the school board has brought the great program of school building of the City of New York to the attention of the committee of the public group and he is now actively endeavoring to arouse public interest in this enterprise. It is proposed to complete within the next two or three years over 100 schools which will probably cost not less than \$100,000,000. In spite of the efforts of the city officials responsible for this work, very little progress has been made on the buildings. Construction is far behind the program for completion and there has been no improvement in the rate of progress during the year. There is no reasonable ground for future improvement except through the falling off of the demand for other building work and a consequent release of men to the schools.

The deplorable state of housing of those least able to meet the high cost of construction and the high rents has also been brought to the attention of the committee. Unhealthful conditions of life among a great many of the poor and an alarming increase in social evils have resulted. It has been urged that a proper public understanding of this situation would lead to prompt public demand for betterment. That there is public interest is evidenced by recent authorization of a state commission to study housing conditions and means of improvement, and by public discussion of the rent

laws, of the policy of tax exemption for certain types of residential buildings, and of the revelation of the Lockwood Committee.

Failure to secure schools and homes is so vital to social welfare that it is proper to consider the need of some measure of regulation. A declaration of the prior right of certain types of buildings in each community in accordance with its needs may be necessary. It has been suggested that this control can be secured by agreement of the loaning institutions as to the type of construction which would be most helpful.

In contrast with this plan, which assumes the existence of some element of self control in the industry, one of the labor delegations which met the committee of the public group urged immediate government intervention in the building crisis to secure the continuance of only the most necessary work. It was the opinion of labor in this instance that only public authority could prevent a continued housing shortage, high rents, low wages or unemployment, and a business depression followed by a violent rise in costs.

All who are concerned with the building industry should recognize that conditions this year have not been such as will promote its prosperity. These conditions must be improved by those directly connected with the work, or by a public whose interest is at stake. In the protection of that interest it may become necessary to adopt measures which may now be thought drastic, but which, under the continued pressure of failure to secure relief otherwise, would be found essential.

From the circumstances attending the organization and the work of this committee, those directly engaged in building work may observe the necessity of bringing about such a measure of stability as will avoid the introduction of what one builder of many years' experience described as "some body strong enough to tell us what we have to do."

The committee of the public group is of the opinion that such stability has not yet been arrived at, and that without constructive action New York will still have to deal with the difficulties which the building industry has encountered this year. The large potential building program for 1924 should not find New York hobbled by a continuance of these conditions.

R. H. SHREVE,  
Chairman.

**An old legend tells of a magician's vase; the magician could get out of it only that which he put in. Advertising is just that. If you don't get into it the "kick" of salesmanship it is going to miss by just that much the pulling power it ought to have.**

## As The Editor Sees It

### HOUSING NEGRO MIGRANTS

*Excessive Negro Migration—Not a  
Racial Question*

The Philadelphia Housing Association feels that the recent report of the Committee on Negro Migration is so startling from the housing standpoint that it deems it advisable to call the attention of the public to the housing facts disclosed by this study.

In presenting this material it may be well to state that the Migration Committee does not consider this a racial question, but one of general public significance. There is no difference between this problem, and the problem confronting the large mass of small-wage earners who have been driven to congested occupancy because of an inadequate supply of small houses.

The Housing Association goes a step further and urges the public to heed the Migration Committee's emphasis in this matter and not think the problem is a racial one. The same unfortunate situation would arise were this a European immigration. Only the present immigration laws, restricting the number of newcomers to the United States, is preventing a European influx today.

*Negro Migrants Increase Philadelphia's  
Population 10,500 in One Year*

The report of the Migration Committee states that:

"A study conducted during the past

three months, which covered 931 properties and 1,282 Negroes recently arrived from the South, revealed that Southern Negroes are migrating to Philadelphia in increasing numbers. The number coming to Philadelphia for the year ending June 30, 1923, approximates 10,500 persons. This is about one-third of Philadelphia's normal population yearly increment for all races, and compared with the normal yearly increment of Negro inhabitants based on records of the previous decade, is an increase in the annual gain in such population of 200% over the past year.

#### *Migrants of a High Type*

"Apparently proximity to the North is a factor in this migration, for the largest numbers have come from Virginia, Georgia, North Carolina and South Carolina in the order named.

"These migrants are apparently of a higher grade than those of previous migrations. About 90% of the adults are Churchmembers, and about 36% belong to fraternities having welfare and benefit features. This, besides indicating the type of the migrating individuals, also offers some assurance against pauperism and distress.

"They are not coming from the South in droves, but are rather drifting in; they are being met by their friends and relatives; the workers are coming first, and their families follow later. All seem to have steady work and many have ready

funds with them. Their services are being quickly utilized in industry. These migrants are not presenting an industrial problem to Philadelphia, for their labor is an asset.

#### *Housing and Health the Big Problems*

"The big outstanding problems created by the influx arise from the inadequate housing facilities and the health menace through overcrowding. Many families are going into dwellings already occupied, while others are taking up residence either as tenants in one or two rooms, or as lodgers.

"A spot map giving locations of these families shows an overwhelming majority between Girard and Washington Avenues from the Delaware to the Schuylkill Rivers, with others settling in Negro centers in West Philadelphia, Germantown and South Philadelphia. In the middle city area where multiple occupancy is more prevalent than elsewhere in Philadelphia, many of these newcomers have been taken into houses already overcrowded. One four-room house was found occupied by four new families, one family consisting of a man, his wife and six children. Another six-room house was found with five families, and within two weeks the house next door, which had been occupied by one family, had increased to three-family occupancy. Above a small West Philadelphia garage a migrant rented a single room for herself, an adopted son, three married children,

**BLUE  
PRINTS**

and their children, making a total of 16 persons. The house has neither yard nor toilet, and filth and waste are thrown into an open lot adjoining. In many of the houses thus converted to multiple occupancy the sanitary equipment is sub-standard, and does not comply with City Housing Laws.

#### *Overcrowding and Sickness*

"Besides the moral hazard of such overcrowding, there is a grave hazard to individual health and to the health of the entire city. No better evidence is needed to show the persistent menace from such overcrowding than the almost superhuman efforts which the Division of Medical Inspection, Bureau of Health, has put forth to prevent the development of a small-pox epidemic threatened by the recurrence of small-pox cases among colored migrants in overcrowded and insanitary houses. Within seven months the Medical Inspectors have been obliged to quarantine 42 different districts and to vaccinate every unvaccinated resident. Every one of the small-pox cases found in these districts was a Negro recently come from the South. In one house occupied by 38 recent arrivals, 7 cases were found. In another house occupied by forty people, 7 cases of small-pox were found, and still in another house 8 cases were found. In one section which was quarantined there were 500 unvaccinated persons, and in another section there were 300 such persons, mixed population, as compared with the average number of unvaccinated persons of all races, varying from 125 to 175 persons per quarantine. Many of these Negroes come from localities where vaccination is not enforced as it is in Philadelphia. It is felt that a more rigid enforcement of vaccination at the source of migration will materially reduce the problem here.

#### *Indefatigable Guardians of Public Health*

"The city does not appreciate and cannot estimate the saving to Philadelphia from this loathsome disease which the City Medical Inspection, through its quarantines, has attained. The protection which has saved Philadelphia from a serious outbreak of small-pox is this efficient work of the Health Department, for Philadelphia's culpable neglect of the housing conditions in congested sections practically presents culture centers for the development of plagues.

"The 42 small-pox cases widely separated were not all brought here from the South, but developed among Southern negroes after they reached Philadelphia, through contact with cases, this contact arising through congested occupancy. Philadelphia cannot afford to assume a state of security which does not exist.

#### *Recommendations of the Committee*

"Although many social agencies and Churches are awake to the problem and

are doing all that it is possible for them to do for the newcomers, the Committee feels that the real responsibility falls on the city's shoulders, and the action that can give a great benefit to these migrants and to the entire city must come from the municipal government.

"This survey showed the inspection service to locate insanitary occupancy to force its correction is woefully inadequate. Five inspectors, the full force of the Housing Section, have been assigned to this task. The same number worked on the housing force in 1909. The city has increased almost 400,000 in population and has built about 75,000 new houses since then, while the listed tenements, only a fraction of the total tenements occupied, have increased over 70%. But the inspection force to handle these properties and the insanitation attendant upon the added congestion of the past 5 years has not been increased. This inspection service refunds to the city a large part of its cost, and there is little excuse for not maintaining it on a par with the need. The problem is one that calls for prompt acquiescence by City Council to the request of the Department of Health for more inspectors.

"A second step is one that must be taken by the public at large. Philadelphia, for her own protection, must provide adequate housing for these families of small means who are unable to pay the high rentals now being asked and those others who can pay but cannot find houses to rent. Because of labor shortage these Negroes are much needed in Philadelphia. If the commercial builder does not find it to his advantage to build low cost houses, it would certainly be an advantageous proposition for the employers of this new labor to work out a program for such dwelling construction."

To the Philadelphia Housing Association, conscious of the increasing congestion of Philadelphia dwellings due to normal population growth these findings of the Migration Committee seem most timely. The city is not reducing its housing shortage. Operative builders are engaged in commercial production just as much as any manufacturer. The brunt of the responsibility for constructing small houses does not rest with them. If it rests anywhere it falls on the shoulders of that body of enlightened citizenship, intelligent enough to recognize a civic problem, and financially able to meet it. Comparatively low cost houses can be built today without a loss if the heavy cost of financing construction can be overcome by direct capital investment.

There is an opportunity here also for the Negro banks, building and loan associations, and Negro social leaders to come forward and through a building corporation construct small cost houses for their own people.
